**APPENDIX A**

# PROJECT STANDARDS

**Current Environmental Laws and Regulations in Türkiye relevant to the Project**

| Current Environmental Laws and Regulations | Date and No of Issuing Official Gazette |
|---|---|
| Environment Law | 11.08.1983, 18132 |
| **Permitting** | |
| Regulation on Environmental Impact Assessment | 29.07.2022, 31907 |
| Regulation on Environmental Auditing | 21.11.2008, 27061 |
| Regulation on Environmental Permits and Licenses | 10.09.2014, 29115 |
| **Air Quality** | |
| Regulation on Control of Air Pollution caused by Heating | 13.01.2005, 25699 |
| Regulation on Assessment and Management of Air Quality | 06.06.2008, 26898 |
| Regulation on Decreasing the Ozone Depleting Materials | 07.04.2017, 30031 |
| Regulation on Control of Exhaust Gas Emission | 11.03.2017, 30004 |
| Regulation on Control of Industrial Air Pollution | 03.07.2009, 27277 |
| Regulation on the Reduction in the Sulphur Content of Some Fuel Types | 06.10.2009, 27368 |
| Regulation on Odour Causing Emissions | 19.07.2013, 28712 |
| **Water Quality** | |
| Regulation on Water Pollution Control | 31.12.2004, 25687 |
| Groundwater Law (No. 167) | 23.12.1960, 10688 |
| Regulation on Protection of Groundwater against Pollution and Deterioration | 07.04.2012, 28257 |
| Regulation on Protection of Wetlands | 04.04.2014, 28962 |
| Regulation on Control of Pollution Caused by Dangerous Substances in Water and its Environment | 26.11.2005, 26005 |
| Regulation on Urban Wastewater Treatment | 08.01.2006, 26047 |
| Regulation on Water Intended for Human Consumption | 17.02.2005, 25730 |
| Regulation on Surface Water Quality | 30.11.2012 28483 |
| Regulation on Water Conservation against Pollution Caused by Nitrates from Agricultural Sources | 23.07.2016, 29779 |

| Current Environmental Laws and Regulations | Date and No of Issuing Official Gazette |
|---|---|
| **Soil Quality** | |
| Regulation on Pollutant Release and Transport Registration | 04.12.2021, 31679 |
| Law on Protection of Soil and Land Use (No. 5403) | 19.07.2005, 25880 |
| Regulation on Control of Soil Pollution and Contaminated Lands by Point Sources | 08.06.2010, 27605 |
| **Waste Management** | |
| Regulation on Waste Management | 02.04.2015, 29314 |
| Regulation on Control of Excavation Soil, Construction and Demolition Wastes | 18.03.2004, 25406 |
| Regulation on Control of Waste Batteries and Accumulators | 31.08.2004, 25569 |
| Regulation on Control of Vegetative Oils | 06.06.2015, 29378 |
| Regulation on Control of Medical Wastes | 25.01.2017, 29959 |
| Regulation on Control of End-of-Life Tires | 25.11.2006, 26357 |
| Regulation on Control of Waste Electrical and Electronic Goods | 22.05. 2012, 22300 |
| Regulation on Management of Waste Oils | 21.12.2019, 30985 |
| Regulation on Control of End-of-Life Vehicles | 30.12.2009, 27448 |
| Regulation on Landfills (Regular Storage of Wastes) | 26.03.2010, 27533 |
| Regulation on Control of Packaging Wastes | 26.06.2021, 31523 |
| Regulation on Control of Polychlorinated Biphenyls (PCBs) and Polychlorinated Terphenyls (PCTs) | 27.12.2007, 26739 |
| Regulation on Management of Radioactive Wastes and Spent Fuel | 07.11.2023, 32362 |
| Regulation on Zero Waste | 12.7.2019, 30829 |
| **Chemicals Management** | |
| Regulation on the Prevention of Major Industrial Accidents and Reducing Their Effects | 2.3.2019, 30702 |
| Regulation on the Transportation of Dangerous Goods by Road | 24.04.2019, 30754 |
| Regulation on Safe Transportation of Radioactive Materials | 08.07.2005, 25869 |

| Current Environmental Laws and Regulations | Date and No of Issuing Official Gazette |
|---|---|
| Regulation on the Classification, Packaging, and Labelling of Materials and Mixtures | 11.12.2013, 28848 |
| Regulation on Registration, Evaluation, Permission and Restriction of Chemicals | 23.06.2017, 30105 |
| **Noise Management** | |
| Regulation on Management of Environmental Noise | 30.11.2022, 32029 |
| Regulation Related to Noise Emissions by Equipment for Outdoor Use | 30.12.2006, 26392 |
| Type Approval Regulation on Exterior Noise Emissions and Exhaust Systems of Motor Vehicles | 30.11.2000, 24246 |
| **Nature Conservation and Biodiversity** | |
| Regulation on Wildlife Protection and Wildlife Enhancement Areas | 08.11.2004, 25637 |
| Law on Forestry (No. 6831) | 08.09.1956, 9402 |
| National Parks Law (No. 2873) | 11.08.1983, 18132 |
| **Cultural Heritage** | |
| Law on Preservation of Cultural and Natural Assets (Law No. 2863) | 23.07.1983, 18113 |
| Principal Decision (No. 658) | - |
| Law on the Approval of the Convention for the Protection of the Intangible Cultural Heritage (No. 5448) | 19/01/2006 |
| **Land Use** | |
| Law on Soil Preservation and Land Utilization (No. 5403) | 19.07.2005, 25880 |
| Pasture Law (No. 4342) | 28.02.1998, 23272 |
| Expropriation Law (No. 2942) | 08.11.1983, 18215 |
| Settlement Law (No. 5543) | 26.09.2006, 26301 |
| Reconstruction Law (No. 3194) | 09.05.1985, 18749 |
| **Resources Management** | |
| Energy Efficiency Law (No. 5627) | 02.05.2007, 26510 |
| Regulation on the Improvement of the Energy Sources and the Efficiency in the Energy Usage | 27.10.2011, 28097 |

**Current Labour and H&S Laws and Regulations in Türkiye**

| Existing Labour and H&S Laws and Regulations | Date and No of Issuing Official Gazette |
|---|---|
| **Laws** | |
| The Labour Law – No. 4857<br>*(Aims to regulate the working conditions and work-related rights and obligations of employers and employees working within the confines of an employment contract.)* | 10.06.2003, 25134 |
| The Occupational Health and Safety Law - Law No. 6331 | 30.06.2012, 28339 |
| **Regulations** | |
| Regulation on Safety and Health Requirements Working with Display Screen Equipment | 16.04.2013, 28620 |
| Regulation on Protection of Workers from the Risks of Vibration | 22.08.2013, 28743 |
| Regulation on Prevention of Workers from Risks Created from Noise | 28.07.2013, 28721 |
| Regulation on Management of Dust | 05.11.2013, 28812 |
| Regulation on Health and Safety Signs | 11.09.2013, 28762 |
| Regulation on Health and Safety at Construction Sites | 05.10.2013, 28786 |
| Regulation on Protection of Workers from the Risk of Explosive Media | 30.04.2013, 28633 |
| Regulation on Health and Safety Precautions Regarding Working with Asbestos | 25.01.2013, 28539 |
| Regulation on Manual Handling | 24.07.2013, 28717 |
| Regulation on Principles and Procedures for Health and Safety Training of Employees | 15.05.2013, 28648 |
| Regulation on Use of Personnel Protective Equipment in Workplaces | 02.07.2013, 28695 |
| Regulation on Health and Safety Conditions Regarding Use of Work Equipment | 25.04.2013, 28628 |
| Regulation on Health and Safety Regarding Temporary Works | 23.08.2013, 28744 |
| Personnel Protective Equipment Regulation | 01.05.2019, 30761 |
| Regulation on Health and Safety Precautions Regarding Working with Chemicals | 12.08.2013, 28733 |
| Regulations on the Prevention of Biological Exposure Risks | 15.06.2013, 28678 |
| Regulation on the Employment of Pregnant or Lactating Women, Children's Care Homes and Breastfeeding Rooms | 16.08.2013, 28737 |

| Existing Labour and H&S Laws and Regulations | Date and No of Issuing Official Gazette |
|---|---|
| Regulation on the Procedures and Principles of the Employment of Children's and Young Workers | 06.04.2004, 25425 |
| Regulation on Health and Safety Services | 29.12.2012, 28512 |
| Regulation on Health and Safety Risk Assessment | 29.12.2012, 28512 |
| First Aid Regulation | 29.7.2015, 29429 |
| Regulation on Protection of Buildings Against Fire | 19.12.2007, 26735 |
| Regulation on Work Stoppage in Workplaces | 30.03.2013, 28603 |
| Regulation on Emergency Cases in Workplaces | 18.06.2013, 28681 |
| Regulation on Health and Safety Precautions Regarding Working with Cancerogenic and Mutagenic Substances | 06.08.2013, 28730 |
| Regulation on Equipment and Protective Systems Used in Potentially Explosive Atmospheres | 30.6.2016, 29758 |
| Regulation on Laboratories Conducting Occupational Hygiene Measurement, Testing and Analysis | 24.1.2017, 29958 |
| Regulation on Health and Safety Measures to be Taken in Workplace Buildings and Annexes. | 17.7.2013, 28710 |
| Regulation on the Duty, Authority, Responsibility and Training of Occupational Safety Specialists | 29.12.2012, 28512 |
| Regulation on the Duty, Authority, Responsibility and Training of Occupational Physicians | 20.7.2013, 28713 |

**Other Applicable Legislation Relevant to the Project**

| Other Applicable Legislation Relevant to the Project | Date and No of Issuing Official Gazette |
|---|---|
| General Public Health Law (No. 1593) | 24.04.1930, 1489 |
| Law on the Protection of Cemeteries (No. 3998) | 13.06.1994, 21959 |
| Regulation on Preparation of Spatial Plans | 14.06.2014, 29030 |
| Unplanned Areas Construction Regulation | 02.11.1985, 18916 |
| Regulation on Workplace Establishment and Operating Licenses | 10.08.2005, 25902 |
| Regulation on Buildings to be Built in Disaster Areas" | 14.07.2007, 26582 |
| Türkiye Building Earthquake Regulation | 18.03.2018, 30364 |
| Disaster Regulation for Highway Engineering Structures | 07.12.2006 26369 |
| Türkiye Bridge Earthquake Regulation | 06.10.2020 31266 |
| Türkiye Insulated and Damping Bridge and Viaducts Earthquake Regulation | 06.10.2020 31266 |
| Regulation on the Obtaining, Processing and Control of the Sand, Gravel and Similar Materials | 08.12.2007, 26724 |

**International Agreements which Türkiye is a Party**

| International Convention / Protocol | Date and No of Issuing Turkish Official Gazette |
|---|---|
| European Cultural Convention; 19.12.1954 | 17.06.1957, 9635 |
| International Convention for the Establishment of the European and Mediterranean Plan Protection Organization; Paris, 1951 | 10.08.1965 |
| The Convention for the Protection of Cultural Property in the Event of Armed Conflict; 14.04.1954 | 08.11.1965, 12145 |
| International Convention for the Protection of Birds; Paris, 1959 | 17.12.1966, 12480 |
| Convention on Legal Responsibilities about the Nuclear Energy Field; 29.1.1960, and its addendum protocol dated 28.01.1964 | 13.06.1967, 12620 |
| Agreement on an International Energy Program; Paris, 1974 | 04.05.1981 |
| Convention for the Protection of the World Cultural and Natural Heritage; Paris, 1972 | 14.2.1983, 17959 |
| Convention on Long-Range Transboundary Air Pollution; Geneva, 1979 | 23.03.1983,17996 |
| The Convention on the Conservation of European Wildlife and Natural Habitats (Bern Convention); Bern, opened for signature on 19.09.1979, entered into force on 01.06.1982 | Ratification date: 02.05.1984<br>Entered into force: 01.09.1984 |
| Protocol to the Convention on Long-Range Transboundary Air Pollution on the Financing of the Co-operative Program for Monitoring and Evaluation of the Long-Range Transmission of Air Pollutants in Europe; Geneva, 1984 | 23.07.1985, 18820 |
| Convention on the Control of Transboundary Movements of Hazardous Waste and Disposal; Basel, 22.03.1989 | 15.05.1994, 21935 |
| The Convention on Wetlands of International Importance, especially as Waterfowl Habitat (Ramsar Convention); entered into force on 21.12.1975 | 17.05.1994, 21937 |
| Montreal Protocol on Substances That Deplete the Ozone Layer; Montreal, opened for signature on 16.09.1987, entered into force on 1.1.1989<br>( revisions: 1990,London; 1991,Nairobi; 1992,Copenhagen; 1993,Bangkok; 1995,Vienna; 1997,Montreal; and 1999,Beijing) | 28.12.1994, 22155 |
| Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES); opened for signature on 3.3.1973, entered into force on 1.7.1975 | 20.06.1996, 22672 (entered into force on 22.12.1996) |
| United Nations Convention to Combat Desertification; Paris, 17.6.1994, entered into force in December 1996 | 1997 |

| International Convention / Protocol | Date and No of Issuing Turkish Official Gazette |
|---|---|
| Biodiversity Convention; opened for signature at the Earth Summit in Rio de Janeiro on 5.6.1992, entered into force on 29.12.1993 | 27.12.1996, 22860 |
| Convention on the Transboundary Effects of Industrial Accidents | 18.03.1992 |
| The Stockholm Convention on Persistent Organic Pollutants | 22.05.2001 |
| United Nations Framework Convention on Climate Change; 2004, and Kyoto Protocol on Global Warming; 2008<br><br>*General principle of Kyoto is the signatory parties should decrease their GHG emissions by 5.2% of the 2009 amount till the end of 2012. After 2012, a new agreement and new emission limits will come into picture.* | Turkish Parliament accepted to be a signatory of Kyoto Protocol in February 2009. However, Türkiye is not a party in the Protocol, thus has no commitment, until the end of 2012. |

**Relevant European Regulations**

| European Regulations | |
|---|---|
| **Environmental Issues** | |
| **Impact Assessment** | ■ Council Directive 2014/52/EU on the assessment of the effects of certain public and private projects on the environment |
| **Air Quality** | ■ Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control). Directive 2010/75/EU replaces definitively, with effect from 7 January 2014<br>■ Directive 1999/13/EC on reducing emissions of volatile organic compounds (VOCs)<br>■ Directive 2008/1/EC concerning integrated pollution prevention and control<br>■ Directive 2008/50/EC of the European Parliament and of the Council of 21 May 2008 on ambient air quality and cleaner air for Europe<br>■ Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC<br>■ Regulation (EC) No 2037/2000 of the European Parliament and of the Council of 29 June 2000 on substances that deplete the ozone layer<br>■ Council Directive 1999/32/EC of 26 April 1999 relating to a reduction in the sulphur content of certain liquid fuels and amending Directive 93/12/EEC<br>■ Directive 2001/81/EC of the European Parliament and of the Council of 23 October 2001 on national emission ceilings for certain atmospheric pollutants |
| **Energy Conservation** | ■ 32012L0027: Directive 2012/27/EU of the European Parliament and of the Council of 25 October 2012 on energy efficiency, amending Directives 2009/125/EC and 2010/30/EU and repealing Directives 2004/8/EC and 2006/32/EC Text with EEA relevance<br>■ Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control<br>■ EC/JRC 2008: IPPC Reference Document on Best Available Techniques for Energy Efficiency. June 2008 |
| **Water and Wastewater Quality** | ■ Council Directive 91/271/EEC of 21 May 1991 Concerning Urban Wastewater Treatment<br>■ Council Directive 98/83/EC of 3 November 1998 on the quality of water intended for human consumption<br>■ Directive 2006/118/EC of the European Parliament and of the Council of 12 December 2006 on the protection of groundwater against pollution and deterioration<br>■ Council Directive 80/68/EEC of 17 December 1979 on the protection of groundwater against pollution caused by certain dangerous substances<br>■ Directive 2006/11/EC of the European Parliament and of the Council of 15 February 2006 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community |

| European Regulations | |
|---|---|
| | ■ Directive 2008/105/EC of the European Parliament and of the Council of 16 December 2008 on environmental quality standards in the field of water policy, amending and subsequently repealing Council Directives 82/176/EEC, 83/513/EEC, 84/156/EEC, 84/491/EEC, 86/280/EEC and amending Directive 2000/60/EC of the European Parliament and of the Council |
| **Water Conservation** | ■ Directive 2006/11/EC of the European Parliament and of the Council of 15 February 2006 on pollution caused by certain dangerous substances discharged into the aquatic environment of the Community<br>■ Council Directive of 12 June 1986 on limit values and quality objectives for discharges of certain dangerous substances included in List I of the Annex to Directive 76/464/EEC |
| **Hazardous Materials Management** | ■ Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC<br>■ Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006<br>■ Council Directive 67/548/EEC of 27 June 1967 on the approximation of laws, regulations and administrative provisions relating to the classification, packaging and labelling of dangerous substances<br>■ Directive 2008/68/EC of the European Parliament and of the Council of 24 September 2008 on the inland transport of dangerous goods |
| **Waste Management** | ■ Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on waste<br>■ Directive 94/62/EC of the European Parliament and of the Council of 20 December 1994 on packaging and packaging waste<br>■ Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE)<br>■ Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment<br>■ Directive 2006/66/EC of the European Parliament and of the Council of 6 September 2006 on batteries and accumulators and waste batteries and accumulators and repealing Directive 91/157/EEC<br>■ Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste and repealing certain Directives<br>■ Directive 2000/53/EC of the European Parliament and of 18 September 2000 on end-of life vehicles |

[3] IFC Standard: exhaust bore size diameter [mm] < 400
[4] IFC Standard: exhaust bore size diameter [mm] > or = 400
[5] 1.5 percent Sulphur or up to 3.0 percent Sulphur

## Water Quality

**Surface Water Chemical and Physiochemical Parameters Criteria[1]**

| Water Quality Parameters | | Water Quality Classes[(a)] | | |
|---|---|---|---|---|
| | | I (very good) | II (good) | III (mediocre) |
| Colour (m$^{-1}$) | RES 436 nm: | ≤ 1.5 | 3.0 | > 4.3 |
| | RES 525 nm: | ≤ 1.2 | 2.4 | > 3.7 |
| | RES 620 nm: | ≤ 0.8 | 1.7 | 2.5 |
| pH | | 6-9 | 6-9 | 6-9 |
| Conductivity (µS/cm) | | < 400 | 1000 | > 1000 |
| Oil and Grease (mg/L) | | < 0.2 | 0.3 | > 0.3 |
| Dissolved Oxygen (mg/L) | | > 8 | 6 | < 6 |
| Chemical Oxygen Demand (COD) (mg/L) | | < 25 | 50 | > 50 |
| Biochemical Oxygen Demand ($BOD_5$) (mg/L) | | < 4 | 8 | > 8 |
| Ammonium Nitrogen (mg $NH_4^+$-N/L) | | < 0.2 | 1 | > 1 |
| Nitrate-N (mg $NO_3^-$-N/L) | | < 3 | 10 | > 10 |
| Total Kjeldahl nitrogen (mg N/L) [(b)] | | < 0.5 | 1.5 | > 1.5 |
| Total Nitrogen (mg N/L) [(c)] | | < 3.5 | 11.5 | > 11.5 |
| Orthophosphate Phosphorus (mg o-$PO_4$-P/L) | | < 0.05 | 0.16 | > 0.16 |
| Total Phosphorous (mg P/L) | | < 0.08 | 0.2 | > 0.2 |
| Flouride (µg/L) | | ≤ 1000 | 1500 | > 1500 |
| Manganese (µg/L) | | ≤ 100 | 500 | > 500 |
| Selenium (µg/L) | | ≤ 10 | 15 | > 15 |
| Sulphur (µg/L) | | ≤ 2 | 5 | > 5 |

[1]Appendix 5 Table 2, Regulation on Surface Water Quality, Changed in the Official Gazette on 10/08/2016- No. 29797

(a) Water use purposes according to their quality classes:

**I. Class-** High quality water (I. class water quality means the condition of the water is "Very Good".);

1) Surface water with a high potential of being drinking water,
2) Water that can be used for recreational purposes, including those such as swimming that include body contact,
3) Water that can be used for trout farming,
4) Water that can be used for animal husbandry and agricultural needs.

**II. Class-** Water with low pollution levels (II. Class water quality means the condition of the water is "Good".);

1) Surface Waters with potential to be drinking water,
2) Water which can be used for recreational purposes,
3) Water which can be used for farming fish other than trout,
4) Irrigation water upon the condition that it reaches the criteria of the irrigation water quality of the respective legislation.

**III. Class-** Polluted water (III. Class water quality means the condition of the water is "Mediocre";

Facilities needing water, with the exception of those for food and textile, once the water has undergone the appropriate treatment it can be used for water product farming and industry.

(b) TKN: $NH_3$-N + Organic Nitrogen

(c) TN: TKN + $NO_3$-N + $NO_2$-N

### Irrigation Water Classification

| Salinity Hazard Class | EC (µS/cm) | Irrigation Water Class | Sodium Hazard Class | SAR | Irrigation Water Class |
|---|---|---|---|---|---|
| **C1** | 100-250 | Low Salinity | **S1** | <10 | Low Sodium |
| **C2** | 250-750 | Medium Salinity | **S2** | 10-18 | Medium Sodium |
| **C3** | 750-2250 | High Salinity | **S3** | 18-26 | High Sodium |
| **C4** | >2250 | Very High Salinity | **S4** | >26 | Very High Sodium |

### Water Class Quality Criteria for Continental Surface Water that is to Receive Effluent[1]

| Water Quality Parameters | Water Quality Classes[2] | | | |
|---|---|---|---|---|
| | I | II | III | IV |
| A) Physical and Inorganic-Chemical Parameters | | | | |
| 1) Temperature (°C) | 25 | 25 | 30 | > 30 |
| 2) pH | 6.5-8.5 | 6.5-8.5 | 6.0-9.0 | Outside of 6.0-9.0 |
| 3) Dissolved Oxygen (mg $O_2$/L) [a] | 8 | 6 | 3 | < 3 |
| 4) Oxygen Saturation (%) [a] | 90 | 70 | 40 | < 40 |
| 5) Chlorine Ion (mg $Cl^-$/L) | 25 | 200 | 400[b] | > 400 |
| 6) Sulfate Ion (mg $SO_4^=$/L) | 200 | 200 | 400 | > 400 |
| 7) Ammonium Nitrogen (mg $NH_4^+$-N/L) | 0.2[c] | 1[c] | 2[c] | > 2 |
| 8) Nitrite Nitrogen (mg $NO_2^-$-N/L) | 0.002 | 0.01 | 0.05 | > 0.05 |
| 9) Nitrate Nitrogen (mg $NO_3^-$-N/L) | 5 | 10 | 20 | > 20 |
| 10) Total Phosphorous (mg P/L) | 0.02 | 0.16 | 0.65 | > 0.65 |
| 11) Total Dissolved Solids (mg/L) | 500 | 1500 | 5000 | > 5000 |
| 12) Colour (Pt-Co Unit) | 5 | 50 | 300 | > 300 |
| 13) Sodium (mg $Na^+$/L) | 125 | 125 | 250 | > 250 |
| B) Organic Parameters | | | | |
| 1) Chemical Oxygen Demand (COD) (mg/L) | 25 | 50 | 70 | > 70 |
| 2) Biochemical Oxygen Demand (BOD) (mg/L) | 4 | 8 | 20 | > 20 |
| 3) Total Organic Carbon (mg/L) | 5 | 8 | 12 | > 12 |
| 4) Total Kjeldahl-nitrogen (mg/L) | 0.5 | 1.5 | 5 | > 5 |
| 5) Oil and Grease (mg/L) | 0.02 | 0.3 | 0.5 | > 0.5 |

| Water Quality Parameters | Water Quality Classes[2] | | | |
|---|---|---|---|---|
| | I | II | III | IV |
| 6) Methylene Blue Active Substances Assay (MBAS) surfactants (mg/L) | 0.05 | 0.2 | 1 | > 1.5 |
| 7) Phenolic Compounds (volatile) (mg/L) | 0.002 | 0.01 | 0.1 | > 0.1 |
| 8) Mineral oils and derivatives (mg/L) | 0.02 | 0.1 | 0.5 | > 0.5 |
| 9) Total Pesticides (mg/L) | 0.001 | 0.01 | 0.1 | > 0.1 |
| C) Inorganic Contaminant Parameters | | | | |
| 1) Mercury (µg Hg/L) | 0.1 | 0.5 | 2 | > 2 |
| 2) Cadmium (µg Cd/L) | 3 | 5 | 10 | > 10 |
| 3) Lead (µg Pb/L) | 10 | 20 | 50 | > 50 |
| 4) Arsenic (µg As/L) | 20 | 50 | 100 | > 100 |
| 5) Copper (µg Cu/L) | 20 | 50 | 200 | > 200 |
| 6) Chrome (total) (µg Cr/L) | 20 | 50 | 200 | > 200 |
| 7) Chrome (µg $Cr^{+6}$/L) | Undetectable | 20 | 50 | > 50 |
| 8) Cobalt (µg Co/L) | 10 | 20 | 200 | > 200 |
| 9) Nickel (µg Ni/L) | 20 | 50 | 200 | > 200 |
| 10) Zinc (µg Zn/L) | 200 | 500 | 2000 | > 2000 |
| 11) Cyanide (total) (µg CN/L) | 10 | 50 | 100 | > 100 |
| 12) Fluoride (µg $F^-$/L) | 1000 | 1500 | 2000 | > 2000 |
| 13) Free Chlorine (µg $Cl_2$/L) | 10 | 10 | 50 | > 50 |
| 14) Sulphur (µg $S^=$/L) | 2 | 2 | 10 | > 10 |
| 15) Iron (µg Fe/L) | 300 | 1000 | 5000 | > 5000 |
| 16) Manganese (µg Mn/L) | 100 | 500 | 3000 | > 3000 |
| 17) Boron (µg B/L) | 1000[e] | 1000[e] | 1000[e] | > 1000 |
| 18) Selenium (µg Se/L) | 10 | 10 | 20 | > 20 |
| 19) Barium (µg Ba/L) | 1000 | 2000 | 2000 | > 2000 |
| 20) Aluminum (mg Al/L) | 0.3 | 0.3 | 1 | > 1 |
| 21) Radioactivity (Bq/L) | | | | |
| Alpha-activity | 0.5 | 5 | 5 | > 5 |
| Beta- activity | 1 | 10 | 10 | > 10 |
| D) Bacteriologic Parameters | | | | |
| 1) Fecal Coliform (MPN/100 mL) | 10 | 200 | 2000 | > 2000 |
| 2) Total Coliform (MPN/100 mL) | 100 | 20000 | 100000 | > 100000 |

[1]Table 1, from the Appendices of the Regulation on Water Pollution Control, Directed to from Article 38
[2] As described in the footnotes of Surface Water Chemical and Physiochemical Parameters Criteria
[(a)] It is enough to satisfy either one of the concentration or saturation percentage parameters.
[(b)] When irrigating plants that are sensitive to chlorine, this concentration limit may need to be reduced.
[(c)] According to the pH value, the concentration of free ammonia nitrogen should not exceed 0.02 mg $NH_3$-N/L.
[(d)] In this group of criteria, the total concentrations of all of the chemical derivatives of the parameters are given.
[(e)] When irrigating plants that are sensitive to boron, it may be needed to lower this criteria to 300 µg/.

**Effluent Wastewater Standards for Domestic Wastewater**

| Parameters | Unit | Turkish Standard[1] (Population: 84 – 2000) | EU Guid.[2] | IFC Std.[3] | Project Standards |
|---|---|---|---|---|---|
| | | Composite sample – 2 hr | | | |
| pH index | mg/l | 6-9 | - | 6-9 | 6-9 |

| Parameters | Unit | Turkish Standard[1] (Population: 84 – 2000) Composite sample – 2 hr | EU Guid.[2] | IFC Std.[3] | Project Standards |
|---|---|---|---|---|---|
| Biochemical Oxygen Demand | mg/l | 50 | 25 | 30 | 25 |
| Chemical Oxygen Demand | mg/l | 180 | 125 | 125 | 120 |
| Total nitrogen | mg/l | - | 15 | 10 | 10 |

| Total Petroleum Hydrocarbons (Aliphatic) (EC5 - EC8) | mg/kg | 4693 | - |
| Total Petroleum Hydrocarbons (Aliphatic) (EC8> - EC16) | mg/kg | 7821 | - |
| Total Petroleum Hydrocarbons (Aliphatic) (EC16> - EC35) | mg/kg | 156429 | - |
| **Aromatic Fractions of Petroleum Hydrocarbons** | | | |
| Total Petroleum Hydrocarbons (Aromatic) (EC5 - EC9) | mg/kg | 15643 | - |
| Total Petroleum Hydrocarbons (Aromatic) (EC9> - EC16) | mg/kg | 1564 | - |
| Total Petroleum Hydrocarbons (Aromatic) (EC16> - EC35) | mg/kg | 2346 | - |

[1] Regulation on Control of Soil Pollution and Contaminated Lands by Point Sources

## Noise and Vibration

**Noise Standards (dBA)[1, 2]**

| Pollutant / Source | Receptor | IFC | | Regulation on Control of Environmental Noise | | | Project Standards |
|---|---|---|---|---|---|---|---|
| | | Day (07:00-22:00) | Night (22:00-07:00) | Day (07:00-19:00) | Evening (19:00-23:00) | Night (23:00-07:00) | |
| Resources | Industrial facilities, transportation sources | - | - | 65 | 60 | 55 | For Project areas (since classified as industrial facilities, transportation sources):<br>65 (day)<br>60 (evening)<br>55 (night)<br><br>For settlement areas during all phases of Project:<br>55 (day)<br>45 (night) |
| | Businesses | | | Background Noise Levels + 5 | | Background Noise Levels + 3 | |
| | In case of multiple businesses | | | Background Noise Levels + 7 | | Background Noise Levels + 5 | |
| | All sources | | | 100 | | | |
| | Residential; institutional; educational | 55 | 45 | - | - | - | |
| | Industrial; commercial | 70 | 70 | - | - | - | |

[1] Regulation on Control of Environmental Noise
[2] According to the IFC General EHS Guideline Noise measurement levels sourced from Project activities should not exceed the levels presented above or result in a maximum increase in background levels of 3 dB at the nearest receptor location off-site.

## Vibration Standards[1]

**The maximum allowable values of ground vibrations to be created by vibrations that will occur due to blasting in mines, quarries and similar areas[1]**

| Structure Type | | Highest Vibration Rate at Foundation of Buildings, (mm/s) (based on frequency, f=Hz) | | | On the floor (base) of the top floor for all frequencies |
|---|---|---|---|---|---|
| | | f= 1-10 | f=10-50 | f=50-100 | |
| 1 | Industrial buildings | 20 | 40 | 50 | 40 |
| 2 | Durable structures such as houses, brick and concrete | 5 | 15 | 20 | 15 |
| 3 | Buildings, historical and natural structures that are vibration sensitive and excluded from the 1st and 2nd clauses | 2 | 8 | 10 | 8 |

[1] Regulation on Control of Environmental Noise

**The highest allowable values of ground vibrations to be generated by railway and road transportation vehicles, workplaces and industrial facilities in the nearest structure and ground vibrations to be generated by machinery and equipment inside the building[1]**

| Structures | Vibration Frequency (Hz) | Maximum Permissible Vibration Rate (rms value (mm/s)) |
|---|---|---|
| In Residences | 1 | 1.5 |
| | 8-100 | 0.3 |
| In Offices | 1 | 3.5 |
| | 8-100 | 0.6 |
| In Historical and Natural Structures | 1 | 0.8 |
| | 8-100 | 0.1 |

[1] Regulation on Control of Environmental Noise

**The highest allowable values of ground vibrations that will be generated by piling and similar vibration-generating operations in constructions, and outside the nearest structure by construction machinery (in frequency bands between 1 Hz and 80 Hz)[1]**

| Locations | Maximum Permissible Vibration Rate (Peak Value-mm/s) | |
|---|---|---|
| | Continuous Vibration | Discontinuous Vibration |
| Residential Areas | 5 | 10 |
| Commercial Areas | 15 | 30 |

| | | |
|---|---|---|
| Historical and Natural Structures | 2 | 5 |

[1] Regulation on Control of Environmental Noise

**ICNIRP Exposure Limits for General Public Exposure to Electric and Magnetic Fields[1]**

| Frequency | Electric field (V/m) | Magnetic Field (μT) |
|---|---|---|
| 50 Hz | 5000 | 100 |
| 60 Hz | 4150 | 83 |

# LABORATORY ANALYSIS REPORT

## DETERMINATION OF ACID GASES IN DIFFUSION TUBES BY ION CHROMATOGRAPHY

**REPORT NUMBER** X935R

**BOOKING IN REFERENCE No** X935

**DESPATCH NOTE No** SOR01456

**CUSTOMER** Ahmet CETIN
Turkey

**DATE SAMPLES RECEIVED** 25-Oct

**GRADKO LAB REF** GIN01332-01335

**JOB REFERENCE**

| | | | | | NITROGEN DIOXIDE | | | |

**B. ÖLÇÜM RAPORLARI**

# 1.HAVA KALİTESİ ÖLÇÜM RAPORU

Bu rapor yalnızca **KINALI-MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 18-19-20.10.2022 / 17-18-19.11.2022** tarihleri arasında yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**' nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşullarıyle ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

### i. Giriş

2872 sayılı Çevre Kanunu'nun ilgili hükümleri gereğince 03.07.2009 tarih ve 27277 sayılı Resmi Gazete'de yayınlanan "Sanayi Kaynaklı Hava Kirliliğinin Kontrolü Yönetmeliği" ve değişiklik yapılmasına dair yönetmelikler (S.K.H.K.K.Y.), her türlü sanayi ve enerji üretim tesislerinden kaynaklanan hava kirliliği seviyelerine sınırlamalar getirmekte ve bu kirletici kaynakları "Tesis" olarak tanımlayarak çevresindeki hava kirliliğinin ölçüm ve denetimini zorunlu kılmaktadır. Bu yönetmelik gereğince yukarıda verilen tarihler arasında belirlenen noktalarda çöken toz tayinleri ölçümü yapılmış ve "Sanayi Kaynaklı Hava Kirliliğinin Kontrolü Yönetmeliği" esas alınarak bu rapor hazırlanmıştır.

### ii. Ölçüm Metotları

Ölçümler aşağıda verilen standartlar çerçevesinde gerçekleştirilmiştir.

| | |
|---|---|
| **TS 2342** | **NATIONAL PRIMARY AND SECONDARY AMBIENT AIR QUALITY STANDARDS** |

### iii. İlgili Yönetmelik Maddeleri

S.K.H.K.K.Y. Ek-2 gereğince, mevcut tesislerin etki alanında Hava Kirlenmesine Katkı Değeri (H.K.K.D.)' nin dağılım modellemesi kullanılarak hesaplanması, tesis etki alanında hava kalitesinin ölçülmesi ve ölçüm metotları aşağıdaki esaslara göre yapılır:

Çöken toz ölçümü:

Çöken toz ölçümü sırasında tesis inceleme alanı içinde en az 2 (iki) ölçüm noktasında hakim rüzgar yönü dikkate alınır. Aynı bölgede toz emisyonuna neden olan başka kaynakların da bulunması durumunda ölçüm noktası sayısı tesis dışındaki diğer kaynakların katkılarının belirlenmesi için attırılabilir. Ölçüm süresi birer aylık ölçümlerdir. Aylık olarak bulunacak değerler gün sayısına bölünerek bir günde çöken ortalama toz miktarı hesaplanır.

Bir ay süre ile yapılan hava kalitesi ölçümlerinin aritmetik ortalaması, Ek-2 de belirtilen Uzun Vade Sınır Değerin % 60'ının üzerinde olması durumunda ölçüm süresi yetkili merci tarafından uzatılır ve istasyon sayısı artırılabilir.

Hava kalitesi ölçümleri kural olarak yer seviyesinden, 1,5 - 4,0 metre arasındaki yüksekliklerde, binadan (veya ekili alandan) en az 1,5 metre yan mesafe tutularak yapılır. Ormanda yapılan ölçümler, ağaç yüksekliğinden daha yukarıda yapılmalıdır.

### iv. Ölçme Metotları:

Metotların kabul edilebilirlikleri TSE tarafından standartlaştırıldıktan ve Bakanlıkça tebliğ edildikten sonra tescil edilir. İlgili TSE Standardı mevcut değilse, güvenilirliği Bakanlıkça kabul edilen DIN, EPA normlarına uygun metot standartları tatbik edilir. Metotlar tebliği ile ilan edilir.

Ölçüm Yapacak Kurum ve Kuruluşlar:

Tesis etki alanında hava kalitesi ve emisyon ölçümleri, akredite edilmiş veya Bakanlıkça uygun bulunan laboratuarlara sahip olan özel veya kamu kurum kuruluşları tarafından yapılır.

A - Uzun Vadeli Sınır Değerleri (UVS) : Aşılmaması gereken, bütün ölçüm sonuçlarının aritmetik ortalaması olan değerlerdir.

Bu rapor yalnızca **KINALI-MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 18-19-20.10.2022 / 17-18-19.11.2022** tarihleri arasında yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti'** nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mührüsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşullarıyle ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

B - Kısa Vadeli Sınır Değerleri (KVS) : Maksimum günlük ortalama değerler veya istatistik olarak bütün ölçüm sonuçları sayısal değerlerinin büyüklüğüne göre dizildiğinde, ölçüm sonuçlarının % 95'ini aşmaması gereken değerlerdir.

Hava kirleticileri (Çöken Toz) için uyulması gereken sınır değerler aşağıda verilmiştir.

**S.K.H.K.K.Y Tablo 2.2** Tesis Etki Alanında Hava Kalitesi Sınır Değerleri

| Parametre | | Süre | Birimi | YIL | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|

### v. Kullanılan Cihazlar

Çöken toz cihazları TS 2342'de belirtildiği üzere yaptırılmış, 4 yönlü çöken toz ölçüm cihazlarıdır. 4 yönlü çöken toz cihazları ve kaplarda bulunan filtreler, darası alınmış 47 mm çapında quartz filtre, pens, petrislayt, etüv, soğutma işlemi sırasında nemden etkilenmemesi için şartlandırılmış oda, örneklenen filtrelerin tartımı için hassas terazi.

### vi. Ölçüm Prensipleri

Emisyon sonuçlarının doğru ve hatasız olması, doğru bir ölçüm tekniği kullanılmasına bağlı olduğu kadar, ölçümün genel prensiplerine de bağlıdır.
Laboratuvarımız, emisyon raporlarının hazırlanmasında sahada yaptığı ölçümler kadar laboratuardaki ön hazırlık ve ölçüm öncesi kontrollerle de doğru ve güvenli sonuçlara ulaşmayı sağlamaktadır. Bu sebeple emisyon analizleri üç aşamalı olarak yapılmaktadır.

### vii. Ön Hazırlık

Ölçüm öncesi, cihazlar laboratuvardan çıkarılmadan Laboratuar Müdürü gözetiminde yetkili personel tarafından kontrol edilir ve ölçüm ekibine teslim edilir.

### viii. Ölçüm Noktalarının Belirlenmesi

Ölçüm noktaları seçilirken, yerin makro çevre ölçeği (deney yerinin tipi) ve mikro çevre ölçeği (doğrudan istasyonu çevreleyen alan) bakımından bütünlüğüne gereken özen gösterilir.

### ix. Ölçüm ve Analiz İşlemi

Örnekleme işleminde toz filtrede toplanır ve laboratuvar şartlarında gravimetrik olarak tayin edilir. Çöken toz kaplarında toplanan toz laboratuvar koşullarında 47 mm kuartz filtreden geçirilip kalan miktar gravimetrik olarak tayin edilir.

## B. ÖLÇÜM RAPORLARI

# 1. HAVA KALİTESİ ÖLÇÜM RAPORU

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**' nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

## i. Giriş

2872 sayılı Çevre Kanunu'nun ilgili hükümleri gereğince 03.07.2009 tarih ve 27277 sayılı Resmi Gazete'de yayınlanan "Sanayi Kaynaklı Hava Kirliliğinin Kontrolü Yönetmeliği" ve değişiklik yapılmasına dair yönetmelikler (S.K.H.K.K.Y.), her türlü sanayi ve enerji üretim tesislerinden kaynaklanan hava kirliliği seviyelerine sınırlamalar getirmekte ve bu kirletici kaynakları "Tesis" olarak tanımlayarak çevresindeki hava kirliliğinin ölçüm ve denetimini zorunlu kılmaktadır. Bu yönetmelik gereğince yukarıda verilen tarihler arasında belirlenen noktalarda PM10 ve PM2,5 ölçümleri yapılmış ve "Sanayi Kaynaklı Hava Kirliliğinin Kontrolü Yönetmeliği" esas alınarak bu rapor hazırlanmıştır.

## ii. Ölçüm Metotları

Ölçümler aşağıda verilen standartlar çerçevesinde gerçekleştirilmiştir.

| | |
|---|---|
| **TS EN 12341** | **NATIONAL PRIMARY AND SECONDARY AMBIENT AIR QUALITY STANDARDS** |

## iii. İlgili Yönetmelik Maddeleri

S.K.H.K.K.Y. Ek-2 gereğince, mevcut tesislerin etki alanında Hava Kirlenmesine Katkı Değeri (H.K.K.D.)' nin dağılım modellemesi kullanılarak hesaplanması, tesis etki alanında hava kalitesinin ölçülmesi ve ölçüm metotları aşağıdaki esaslara göre yapılır:

Hava kalitesi ölçümleri kural olarak yer seviyesinden, 1,5 - 4,0 metre arasındaki yüksekliklerde, binadan (veya ekili alandan) en az 1,5 metre yan mesafe tutularak yapılır.

A - Uzun Vadeli Sınır Değerleri (UVS) : Aşılmaması gereken, bütün ölçüm sonuçlarının aritmetik ortalaması olan değerlerdir.

B - Kısa Vadeli Sınır Değerleri (KVS) : Maksimum günlük ortalama değerler veya istatistik olarak bütün ölçüm sonuçları sayısal değerlerinin büyüklüğüne göre dizildiğinde, ölçüm sonuçlarının % 95'ini aşmaması gereken değerlerdir.

Hava kirleticileri (PM 10) için uyulması gereken sınır değerler aşağıda verilmiştir.

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**' nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

### iv. Kullanılan Cihazlar, Ölçüm Ve Analiz İşlemi

Tesiste ortam tozu (PM10) ölçümü yapılmıştır. Ölçümlerde MCZ Toz Örnekleme Cihazı kullanılmıştır. Cihaz ortam havasında solunabilir havadaki partikül maddelerin (PM10) örnekleme işleminin gerçekleştirilmesi için tasarlanmıştır. PM10 miktarının tayini TS EN 12341 standardına uygun olarak gerçekleştirilmiştir. Örnekleme işleminde toz filtrede toplanır ve laboratuvar şartlarında gravimetrik olarak tayin edilir. 2,3 $m^3$/sn akış debisi ile cihazlar örnekleme yapabilmektedir. Filtre tutucuda toplanan partikül maddeler, belirli sürenin sonunda cihazdan alınarak laboratuara getirilmektedir. Burada, etüvde kurutulan filtreler terazide tartılarak meydana gelen ağırlık farkı hesaplanmaktadır. Tartımdan elde edilen fark numune alma süresi hesaba katılarak değerlendirilmektedir.

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. **vi. Değerlendirme ve Sonuç**

Proje alanı çevresinde gerçekleştirilen hava kalitesi (PM10) ölçümleri neticesinde elde edilen sonuçlara göre; Havada Asılı Partikül Madde (PM10) konsantrasyonları sınır değerlerin altında kalmaktadır.

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. ## EK-1 LABORATUVAR BELGELERİ

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**' nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

Türk Akreditasyon Kurumu

# AKREDİTASYON SERTİFİKASI

Deney Laboratuvarı olarak faaliyet gösteren,

**BATI LABORATUVARI ÇEVRE ÖLÇÜM HİZMETLERİ BİLİŞİM MÜHENDİSLİK MÜŞAVİRLİK SANAYİ VE TİCARET LİMİTED ŞİRKETİ**

Merkez Adres: İNÖNÜ MAHALLESİ 1738.SOKAK NO:1/10 YENİMAHALLE Ankara / Türkiye

TÜRKAK tarafından yapılan denetim sonucunda TS EN ISO/IEC 17025:2017 standardına göre Ek'te yer alan kapsamlarda akredite edilmiştir.

**Akreditasyon No : AB-0946-T**

**Akreditasyon Tarihi : 31.10.2015**

**Revizyon Tarihi / No : 27.05.2022 / 08**

Bu Sertifika, yukarıda açık adı ve adresi yazılı Kuruluşun TS EN ISO/IEC 17025:2017 Standardına, ilgili Yönetmelik ve Tebliğlere uygunluğunu sürdürmesi halinde **24.02.2024** tarihine kadar geçerlidir.

Gülden Banu Müderrisoğlu
Genel Sekreter

Türk Akreditasyon Kurumu (TÜRKAK) ISO/IEC 17025 alanında Avrupa Akreditasyon Birliği (EA) ve Uluslararası Laboratuvar Akreditasyon Birliği (ILAC) ile çok taraflı anlaşma (MLA/MRA) imzalamıştır.

Bu rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Hava Kalitesi Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**'nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

Deney sonuçları, sadece ölçüm esnasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

## B. ÖLÇÜM RAPORLARI

# 1. Gürültü Ölçüm Sonuç Raporu

rapor yalnızca **KINALI MALKARA YÜKSEK HIZLI TREN PROJESİ** mahallerinde **19-20-21.09.2022 / 22-23-24.09.2022 / 26-27-28.09.2022 / 29-30.09.2022-01.10.2022** tarihlerinde yapılan **Gürültü ve Titreşim Ölçümleri** için geçerli olup **Batı Laboratuvarı Çevre Ölçüm Hizmetleri Bilişim Müh. Müş. San. ve Tic. Ltd. Şti**' nin yazılı onayı olmadan kopyalanıp çoğaltılamaz. Bu rapor çevre mevzuatına ilişkin resmi işlemlerde kullanılamaz. İmzasız ve mühürsüz raporlar geçersizdir. Deney sonuçları, sadece ölçüm sırasındaki işletme koşulları ile ilgilidir.
This report shall not be reproduced other than in full except with the permission of the laboratory. Testing reports without signature and seal are not valid.

## i ÖLÇÜM RAPORLARI

### 1. Kullanılan Cihazlar

Gürültü ölçümlerinde Cesva SC310 Tip 1 Model gürültü ölçüm cihazı ve Cesva CB006 Tip 1 gürültü kalibratörü kullanılmıştır.

## ii ÖLÇÜM METOTLARI

Ölçümler aşağıda verilen standartlar çerçevesinde gerçekleştirilmiştir.

| Parametre | Test / Analiz Metodunun Adı | Deney Metodu ve Kabul Tarihi |
|---|---|---|
| Gürültü Ölçümü | Akustik-Çevre Gürültüsünün Tarifi Ölçülmesi ve Değerlendirilmesi – Bölüm 2: Çevre Gürültü Seviyelerinin Tayini | TS ISO 1996-2:26.03.2009<br>TS ISO 1996-2 / T1:29.06.2009 |

## iii ÖLÇÜM SONUÇLARI VE LOKASYONLAR

Belirlenen 66 ayrı ölçüm istasyonunda yapılan ölçümler sonucunda elde edilen günlük değerler aşağıdaki tablolarda verilmiştir.

**Tablo 1:** Gürültü Ölçüm Noktaları

| ÖLÇÜM TARİHİ | ÖLÇÜM NOKTASI NUMARASI | LOKASYON BİLGİSİ | |
|---|---|---|---|
| 19-20-21.09.2022 | 1.NOKTA | 506305 | 4525655 |

## IFC INTERNATIONAL FINANCE CORPORATION KURUMU ÇERÇEVESİNDE DEĞERLENDİRME

IFC Kriterleri açısından gürültü değerlendirmesi aşağıda verilen sınır değerler dikkate alınarak değerlendirilir.

**Table 1.7.1- Noise Level Guidelines[54]**

| Receptor | One Hour $L_{Aeq}$ (dBA) | |
|---|---|---|
| | Daytime 07:00 - 22:00 | Nighttime 22:00 - 07:00 |
| Residential; institutional; educational[55] | 55 | 45 |
| Industrial; commercial | 70 | 70 |

**Tablo 1.7.1 çerçevesinde değerlendirme (1.GÜN);**

| Ölçüm Yeri | Ölçüm Lokasyonu | | Ölçüm Sonucu Gündüz (dBA) | Ölçüm Sonucu Gece (dBA) |

### iv ÖLÇÜM RAPORLARI

#### 2. Kullanılan Cihazlar

Titreşim ölçümlerinde CESVA VC 431 titreşim ölçüm cihazı ve Cesva T240010 titreşim kalibratörü kullanılmıştır.

### v ÖLÇÜM METOTLARI

Ölçümler aşağıda verilen standartlar çerçevesinde gerçekleştirilmiştir.

| Parametre | Test / Analiz Metodunun Adı | Deney Metodu ve Kabul Tarihi |
|---|---|---|
| Titreşim Ölçümü | Mekanik titreşim ve şok - Binaların titreşimi - Titreşimin ölçülmesi ve binalara etkilerinin değerlendirilmesi için kılavuz | TS ISO 4866 |

### vi ÖLÇÜM SONUÇLARI VE LOKASYONLAR

Belirlenen 48 ayrı ölçüm istasyonunda yapılan ölçümler sonucunda elde edilen günlük değerler aşağıdaki tablolarda verilmiştir.

**Tablo 2:** Gürültü Ölçüm Noktaları

| ÖLÇÜM TARİHİ | ÖLÇÜM NOKTASI NUMARASI | LOKASYON BİLGİSİ | |

**vii Ölçüm Sonuçları**

**Belirlenen her ölçüm noktasında ölçülen titreşim hızı, frekansı,**

Titreşim etkisine neden olabilecek kaynaklar ve bunların en yakın yapıya olan mesafeleri aradaki iletimi sağlayacak jeolojik formasyon göz önüne alınarak değerlendirildiğinde mümkün olabilecek (Titreşim kaynakları ve mümkün olan çalışma şartları irdelendiğinde) en yüksek titreşim salınımlarında ölçümler gerçekleştirilmiş ve sonuçlar aşağıda sunulmuştur.

**Çevresel titreşim değerlerinin ÇGDYY Madde 25 kapsamında değerlendirilmesi.**

ÇEVRESEL GÜRÜLTÜNÜN DEĞERLENDİRİLMESİ VE YÖNETİMİ YÖNETMELİĞİ

EK-VII Tablo – 7: İnşaatlarda Kazık Çakma ve Benzeri Titreşim Yaratan Operasyonların ve İnşaat Makinelerinin En Yakın Çok Hassas (Ek ibare:RG-27/4/2011-27917)ve HassasKullanım Alanının Dışında Yaratacağı Zemin Titreşimlerinin İzin Verilen En Yüksek Değerleri (1 Hz- 80 Hz arasındaki frekans bantlarında)

| | **İzin Verilen En Yüksek Titreşim Hızı (Tepe Değeri-mm/s)** | |
|---|---|---|
| | Sürekli Titreşim | Kesikli Titreşim |
| **Yerleşim Bölgelerinde** | 5 | 10 |
| **Sanayi ve Ticari Bölgelerde** | 15 | 30 |

Ölçülen değerler Tablo 1'de verilmiş olup Tablo 21'de verilen sınır değerlerin altında kalmaktadır.

# DENEY RAPORU / TEST REPORT

Su numunesi TS EN ISO 5667-6. TS ISO 5667-4. TS ISO 5667-11. atıksu numunesi TS ISO 5667-10. deniz suyu numunesi TS ISO 5667-9. çamur numunesi TS EN ISO 5667-13. katı atık numunesi TS 12090. toprak numunesi TS 9923 ve sediment numunesi TS ISO 5667-12 standartlarına gore alınmaktadır.
ENCON Laboratuvarı A.Ş. tarafından alınmayan numuneler için belirtilen ölçüm belirsizliği değerlerine numune almadan kaynaklanan belirsizlik değerleri dahil edilmemektedir.
Laboratuvar yetkili personel tarafından alınmayan ve/veya uygun koşullarda teslim alınmayan numunelerden teknik ve hukuki olarak sorumluluk kabul etmemektedir. Müşteri tarafından sağlanan bilgilerin hukuki sorumluluğu müşteriye aittir. firmamız bu bilgilerden kaynaklanacak sonuçlardan feragat eder.
Water Samples are sampled according to the standards of TS EN ISO 5667-6. TS ISO 5667-4. TS ISO 5667-11. whereas wastewater. sea water. sludge. solid. soil and sediment samples are sampled according to the standard of TS ISO 5667-10. TS ISO 5667-9. TS EN ISO 5667-13. TS 12090. TS 9923 and TS ISO 5667-12. respectively.
For the samples not taken by the ENCON laboratory Inc.. uncertainty values indicated do not cover the uncertainties arising from the sampling.
The Laboratory does not accept technical and legal responsibility for samples that are not sampled by authorized personnel and/or received under inappropriate conditions. The legal responsibility of the information provided by the customer belongs to the customer. our company waives the consequences arising from this information.

Su numunesi TS EN ISO 5667-6. TS ISO 5667-4. TS ISO 5667-11. atıksu numunesi TS ISO 5667-10. deniz suyu numunesi TS ISO 5667-9. çamur numunesi TS EN ISO 5667-13. katı atık numunesi TS 12090. toprak numunesi TS 9923 ve sediment numunesi TS ISO 5667-12 standartlarına gore alınmaktadır.
ENCON Laboratuvarı A.Ş. tarafından alınmayan numuneler için belirtilen ölçüm belirsizliği değerlerine numune almadan kaynaklanan belirsizlik değerleri dahil edilmemektedir.
Laboratuvar yetkili personel tarafından alınmayan ve/veya uygun koşullarda teslim alınmayan numunelerden teknik ve hukuki olarak sorumluluk kabul etmemektedir. Müşteri tarafından sağlanan bilgilerin hukuki sorumluluğu müşteriye aittir. firmamız bu bilgilerden kaynaklanacak sonuçlardan feragat eder.
Water Samples are sampled according to the standards of TS EN ISO 5667-6. TS ISO 5667-4. TS ISO 5667-11. whereas wastewater. sea water. sludge. solid. soil and sediment samples are sampled according to the standard of TS ISO 5667-10. TS ISO 5667-9. TS EN ISO 5667-13. TS 12090. TS 9923 and TS ISO 5667-12. respectively.
For the samples not taken by the ENCON laboratory Inc.. uncertainty values indicated do not cover the uncertainties arising from the sampling.
The Laboratory does not accept technical and legal responsibility for samples that are not sampled by authorized personnel and/or received under inappropriate conditions. The legal responsibility of the information provided by the customer belongs to the customer. our company waives the consequences arising from this information.

## *General Comments*

This report shall not be reproduced except in full, without prior written approval from the laboratory.
The laboratory declares that the test results relate only to the listed samples. If the section "Sampled by" of the Certificate of analysis states: "Sampled by Customer" then the results relate to the sample as received.
Amendmemt 1: W-TRI-SCIH added for samples 001-015, client request. This Amendment 1 replaces the original report issued on 13.4.2023.
Method W-TID-CC: A conservative estimate of TID from GAA and GBA was performed using contributions of Po-210 resp. Ra-228.
Sample(s) PR2331245/008, method W-GAA-SCI: The sample(s) was turbid (coloured), efficiency of gross alpha activity measurement was low, therefore reported limit of detection was higher.
Sample(s) PR2331245/024, method W-GAA-SCI: The sample(s) was turbid (coloured), efficiency of gross alpha activity measurement was low, therefore reported limit of detection was higher.

## *Responsible for accuracy*

**Testing Laboratory No. 1163**
**Accredited by CAI according to**
**CSN EN ISO/IEC 17025:2018**

| *Signatories* | *Position* |
|---|---|
| Lubomír Pokorný | Country Manager |

The company is certified according to ČSN EN ISO 14001 (Environmental management systems) and ČSN ISO 45001 (Occupational health and safety management systems)

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. Measurement uncertainty is expressed as expanded measurement uncertainty with coverage factor k = 2, representing 95% confidence level.
Key: LOR = Limit of reporting; MU = Measurement Uncertainty. The MU does not include sampling uncertainty.

***The end of result part of the certificate of analysis***

## Brief Method Summaries

| *Analytical Methods* | *Method Descriptions* |
|---|---|
| *Location of test performance: Bendlova 1687/7 Ceska Lipa Czech Republic 470 01* | |
| W-GAA-SCI | CSN 75 7611 chapter 4 Determination of gross alpha activity by measuring of evaporated residue in a mixture with ZnS (Ag) scintillator. |
| W-GBAC-CC | CZ_SOP_D06_07_361 (CSN 75 7612, CSN EN ISO 9697, SUJB Recommendation "Measurement and assessment of the content of natural radionuclides in drinking water from public sources and bottled water" DR-RO-5.1 (Rev. 0.0), Prague 2017). Determination of gross beta activity by measuring of evaporated residue by means of proportional detector and calculation of gross beta activity corrected for potassium 40 from measured values. CZ_SOP_D06_07_005 (CSN ISO 8288, CSN 75 7400, CSN EN 1233, CSN EN 16192, CSN ISO 7980, CSN ISO 9964, Perkin-Elmer specifications, samples prepared as per CZ_SOP_D06_07_P02 chap. 10, 13, 17) Determination of elements49) by flame AAS method and stoichiometric calculations of compounds concentration from measured values. |
| W-GBA-PRO | CZ_SOP_D06_07_361 (CSN 75 7612, CSN EN ISO 9697, SUJB Recommendation "Measurement and assessment of the content of natural radionuclides in drinking water from public sources and bottled water" DR-RO-5.1 (Rev. 0.0), Prague 2017). Determination of gross beta activity by measuring of evaporated residue by means of proportional detector and calculation of gross beta activity corrected for potassium 40 from measured values. |
| W-K40-AASF | CZ_SOP_D06_07_005 (CSN ISO 8288, CSN 75 7400, CSN EN 1233, CSN ISO 7980, CSN ISO 9964, Perkin-Elmer specifications) Determination of elements by flame AAS method and stoichiometric calculations of compounds concentration from measured values. |
| W-TID-CC | CZ_SOP_D06_07_372 (SUJB Recommendation "Measurement and assessment of the content of natural radionuclides in drinking water from public sources and bottled water", DR-RO-5.1 (Rev.0.0), Prague 2017, Council Directive 2013/51/EUROATOM of 22.10.2013). Calculation of Indicative Dose (ID) from the measured values of volume activities of individual radionuclides. The conservative estimate of ID is calculated on the base of Ra-228 in the case of beta ray and Po-210 in the case of alpha ray. |
| W-TRI-SCIH | CZ_SOP_D06_07_365 (CSN EN ISO 9698) Determination of tritium volume activity by liquid scintillation counting method (LSC). |

The symbol "*" for the method indicates a test outside the scope of accreditation of the laboratory or subcontractor. If the UNICO-SUB code is stated in the method table, this only informs that the tests have been performed by a subcontractor and the results are given in an annex to the test report, including information on test accreditation. If the lab used for matrix outside the scope of accreditation or non-standard sample matrix procedure specified in the accredited method and issues non-accredited results, this fact is stated on the title page of this protocol in the section "Notes". If the test report shows the results of subcontracting, the place of performance of the test is outside the laboratories of ALS Czech Republic, s.r.o.
The method for calculating of the summation parameters is available on request in the customer service.

# COMMUNITY LEVEL SURVEY

Firstly, we would like to express our gratitude for your willingness to participate in this research. We are conducting this study on behalf of ÇOK A.Ş. to examine the social impacts of the Kınalı-Malkara Motorway Project. Your neighbourhood is one of the areas located in proximity to the proposed route and is expected to experience various positive and/or negative effects. This meeting aims to identify the general characteristics of your neighbourhood, assess the potential impacts of the project, and explore ways to mitigate any adverse effects.

| | | | |
|---|---|---|---|
| Date: | | | |
| Province: | | | |
| District: | | | |
| Village/Neighbourhood: | | | |
| Mukhtar's Name: | | | |
| Mukhtar's Phone Number: | | | |
| PROJECT INFORMATION | | | |
| When and how did you learn that the project? | | | |
| How were you informed? | | | |
| What information do you have about the project? | | | |
| Do you need more information about the project? | ☐Yes<br>☐No | | |
| What additional information do you need? | | | |
| DEMOGRAPHIC INFORMATION | | | |
| Population | | Number of Households | Population |
| | Permanent residents | | |
| | Seasonal residents | | |
| | Other (please specify) | | |
| If there is a seasonal change in the population, what is the main reason? | | | |

| | | | |
|---|---|---|---|
| Has there been a change in the population of the neighbourhood/village in the last five years? | Increased ☐ | Decreased ☐ | Same ☐ |
| If there has been a change, what is the main reason? | | | |
| Which group of the population is migrating in and which group is migrating out? | | | |

| Can you give information about the ratio of the following age groups in the settlement? | |
|---|---|
| Age groups | Ratio (%) |
| 0-5 | |
| 6-18 | |
| 19-25 | |
| 26-39 | |
| 40-55 | |
| 56-65 | |
| 65+ | |

| SOCIAL FACILITIES | | | | |
|---|---|---|---|---|
| EDUCATION | | | | |
| | | Number | If not, | |
| | | | Nearest location | Distance to the settlement (km) |
| School | Kindergarten | | | |
| | Primary education | | | |
| | Middle school | | | |
| | High school | | | |

| | |
|---|---|
| What is the total number of students living in the settlement? | |

| EDUCATIONAL STATUS (for those who are not students and those who are not of educational age) | | |
|---|---|---|
| Educational level | Number | Ratio (%) |
| Never went to school | | |
| Primary school graduate | | |
| Secondary school graduate | | |
| High school graduate | | |
| University graduate | | |

| CONFLICT | | |
|---|---|---|
| In the last five years, has there been any tension in the settlement regarding the following issues? (among the residents) | Yes | No |
| Grazing land use | | |
| Agricultural land use | | |
| Land acquisition | | |
| River use | | |
| Forest use | | |
| Well water use | | |
| Economical (e.g. work situation) | | |
| Religion | | |
| Ethnicity | | |
| Disputes between families | | |
| Other (Specify) | | |

| How were these conflicts resolved?: |
|---|
| |

| ECONOMY | |
|---|---|
| Employment Status and Average Household Income (What is the employment status of residents according to the following occupation list for the age range 16-59?) | |
| What are the main income sources in the settlement? | |
| Agricultural production (field) | |
| Agricultural production (gardening) | |
| Animal husbandry | |
| Beekeeping | |
| Forestry | |
| Tourism | 1. |
| Trade | 2. |
| Craftsmanship | 3. |
| Retirement pension | |
| Construction labour | |
| Agricultural labour | |
| Semi-skilled mining labour | |
| Skilled mining labour | |
| Social aid | |
| Real estate income | |

What are the main agricultural products of the settlement?

| Products | Quantity produced (kilo)<br>(1 ton 1000 kilos) |
|---|---|
| | |
| | |
| | |
| | |
| | |

| | | |
|---|---|---|
| | | |
| | | |
| | | |

Please indicate the number of animals in the settlement:

| | |
|---|---|
| Cattle | |
| Sheep and goat | |
| Poultry | |
| Beehive | |
| Employment Status | Ratio (%) |
| Wage worker | |
| Farmer | |
| Business owner | |
| Unemployed | |
| Daily wage worker | |
| Retired | |

Have there been any changes in job opportunities in the last five years?

☐ Increased

☐ Decreased

☐ Remained the same

If there has been a change, explanation:

What is the average household income? _____TL

Has there been a change in average household purchasing power in the last five years?

☐ Increased ☐ Decreased ☐ Remained the same

If there has been a change, explanation:

| VILLAGE/NEIGHBOURHOOD PROBLEMS | |
|---|---|
| Environmental problems (pollution, dust, noise, etc.) | |

| | |
|---|---|
| Economic Problems (income and employment) | |
| Social Problems (education, social conflicts, etc.) | |
| Health Problems (most common health problems) | |
| What are the most common crimes and crime rates, including changes/trends over the last 5 years? | |

| Identification of Vulnerable Groups | | | |

| J. USE OF NATURAL RESOURCES | | | |
| River Use | | | |
| Is there a river within the borders of the settlement? | | | |
| Do villagers use rivers/lakes for fishing? | | | |

| | |
|---|---|
| How many households derive income from the river/lake? | |
| How many households are fishing from the river/lake for household consumption? | |
| What kind of fish/ how many kg in a year? | |
| In what season do they go fishing? | |
| Do villagers use rivers/lakes for irrigation? | |
| How many households use rivers/lakes for irrigation? | |
| Forest Use | |
| Is there a forest within the borders of the settlement? | |
| Was/will the forest be affected due to the project? | |
| Do villagers collect wood from the forest? | |
| How many households collect wood from the forest to generate income? | |
| How many households collect wood from the forest for household consumption? | |
| How many kg can be collected in a year? | |
| In what season do villagers collect wood? | |
| How many households collect plants from the forest to generate income? | |
| How many households collect plants from the forest for household consumption? | |
| How many kg can be collected in a year? | |
| In what season do villagers collect plants? | |
| Are there timber producers in the settlement? | |
| How many people are engaged in timber production? | |
| Is there hunting in the settlement? | |
| Where do villagers hunt? | |
| How many people hunt for income? | |
| How many people hunt for home consumption? | |

| | |
|---|---|
| What kind of animals do villagers hunt? | |
| Do villagers collect natural medicines from the forest? | |
| If yes, please provide details: | |
| Recreation | |
| Is there a recreation area within the borders of the settlement? | |
| Do you think these areas will be/were affected due to the project? | |
| If yes, please explain: | |
| Is there a tree or natural structure with cultural value within the village borders? | |
| If yes, please explain: | |
| Spring water | |
| Is there spring water within the borders of the settlement? | |
| What is the purpose of use? | |
| How many households use spring water? | |
| If you know the capacity of the spring water, can you specify the capacity? | |
| Do villagers use well water? | |
| What is the purpose of using well water? | |
| How many households use well water? | |

| K. Available Skills | | | |

| Electrician | | | |
| Other, specify | | | |
| Other, specify | | | |

L. PROJECT IMPACTS

ECONOMY

| | | |
|---|---|---|
| Were there any impact on local employment opportunities due to the project? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Were there any impact on local supply opportunities? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Suggestions | | |

INFRASTRUCTURE AND SERVICES

| | | |
|---|---|---|
| 3. Were there any impact on health facilities? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please explain | | |
| 4. Were there any impact regarding educational opportunities? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please explain | | |
| 5. Were there any impact on transportation facilities? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |

| | | |
|---|---|---|
| Please Explain | | |
| Were there any impact on water infrastructure? | One.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Were there any impact on electrical infrastructure? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Do you think the project put pressure on the existing infrastructure? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Suggestions | | |
| POPULATION | | |
| Were there any impact on the population level (such as population influx)? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Were there any social conflict with the project staff? | 1.☐ Yes<br>2.☐ No | |
| Please Explain | | |
| Suggestions | | |

| PUBLIC HEALTH AND SAFETY | | |
|---|---|---|
| Do residents of the village experience any noise-related impact?<br><br>Please Explain<br><br>Suggestions | 1.☐ Yes<br>2.☐ No | 1.☐ Construction<br>2.☐ Operation |
| Do residents of the village experience any impact related to dust?<br><br>Please Explain<br><br>Suggestions | 1.☐ Yes<br>2.☐ No | 1.☐ Construction<br>2.☐ Operation |
| Do residents of the village experience any impact on traffic?<br><br>Please Explain<br><br>Suggestions | 1.☐ Yes<br>2.☐ No | 1.☐ Construction<br>2.☐ Operation |
| Do residents of the village experience any impact on water quality or level?<br><br>Please Explain<br><br>Suggestions | 1.☐ Yes<br>2.☐ No | 1.☐ Construction<br>2.☐ Operation |

| | | |
|---|---|---|
| Does the project create security problems? | 1.☐ Yes<br>2.☐ No | 1.☐ Construction<br>2.☐ Operation |
| Please Explain | | |
| Suggestions | | |

| INCOME SOURCES | | |
|---|---|---|
| Will/Did the project create physical displacement? | 1.☐ Yes<br>2.☐ No | |
| Please Explain | | |
| Suggestions | | |
| Will/Did the project cause any change in the livelihoods of the local people? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Suggestions | | |
| Will/did the project affect livelihood from livestock farming? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Suggestions | | |

| | | |
|---|---|---|
| Will/Did the project affect agricultural income? | 1.☐ Yes<br>2.☐ No | 1.☐ Positive<br>2.☐ Negative |
| Please Explain | | |
| Suggestions | | |
| Will/Did the project cause loss of pasture areas? | 1.☐ Yes<br>2.☐ No | |
| Please Explain | | |
| Suggestions | | |

Are there any other projects within the borders of the settlement that may have an impact during the construction or operation period? If yes, please specify.

Is there anything else you would like to add?

Household Survey

# HOUSEHOLD SURVEY

Firstly, we would like to express our gratitude for your willingness to participate in this research. We are conducting this study on behalf of ÇOK A.Ş. to examine the social impacts of the Kınalı-Malkara Motorway Project. Your neighbourhood is one of the areas located in proximity to the proposed route and is expected to experience various positive and/or negative effects. This meeting aims to identify the general characteristics of your neighbourhood, assess the potential impacts of the project, and explore ways to mitigate any adverse effects.

| A. GENERAL | |

## D. INCOME SOURCES

What are your main sources of income? (Code in order of importance from one to 3)

[ ] Agriculture

[ ] Small business owner

[ ] Seasonal agricultural worker

[ ] Civil servant

[ ] Retired

[ ] Rent

[ ] Paid/salaried

[ ] Animal husbandry

[ ] Other (Specify): ..... .....

[ ] Other (Specify): ..... .....

What is your average monthly income?

☐ 0-2000 TL

☐ 2000- 4000 TL

☐ 4000- 6000 TL

☐ 6000- 8000 TL

☐ 8000- 10000 TL

☐ over 10,000 TL

| E. Land | | | |
|---|---|---|---|
| E.1. land ownership<br>Public (used without permission)<br>Public (legal)<br>For rent<br>Sole owner<br>Shareholder<br>It belongs to someone else; they use it without renting. | E.2.Land Size | E.3.Land type?<br>irrigated agricultural land<br>dry agricultural land<br>land with zoning<br>forest land<br>treasury land<br>pasture<br>Other (specify)<br>Other (specify) | E.4. Purpose of usage?<br>agricultural production<br>letting<br>not in use<br>Greenhouse |
| 1. | | | |
| 2. | | | |
| 3. | | | |
| 4. | | | |
| 5. | | | |

| F. AGRICULTURAL PRODUCTION |
|---|

F.1. Are you cultivating the land?

1.( ) Yes

2.( ) No

F.2. If yes, fill in the table

| F.1.a Main products | F.1.b Total quantity of the product | F.1.c. What percentage is consumed by households? | F.1.d. What percentage is sold? |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |

| F.1.a Main products | F.1.b Total quantity of the product | F.1.c. What percentage is consumed by households? | F.1.d. What percentage is sold? |
|---|---|---|---|
| | | | |
| | | | |
| | | | |

F.3.) Has there been a change in agricultural production in the last 5 years?

1.( ) Increased

2.( ) Decreased

| F.4. The reason for the increase | F.5. The reason for the decrease |
|---|---|
| [ ] Amount of rainfall | [ ] Low prices |
| [ ] Starting to use fertilizers and pesticides | [ ] Lack of manpower |
| [ ] Starting to use organic fertilizer | [ ] Stopping the use of fertilizers and pesticides |
| [ ] Improvement in cultivation techniques | [ ] Stopping the use of organic fertilizers |
| [ ] Using high quality seeds | [ ] Changes in agricultural activities |
| [ ] Access to irrigation | [ ] Lack of technology |
| | [ ] Drought |

F.6. Total income from agriculture ……TL

F.7. Are you interested in animal husbandry?

1.( )Yes

2.( )No

F.8. If yes, fill in the table below

| F.9. Genus | F.10 Number |
|---|---|
| 1. Cattle | |
| 2. Sheeps and goats | |
| 3.Poultry | |
| 3. Beehives | |
| 5. Other ( ) | |
| 6. Other ( ) | |

F.11. Total income from animal husbandry……TL

| G. EXPENDITURES | |
|---|---|
| Expenditure Items | Total annual expense TL |
| Food and drink | |
| Rent | |
| Household bills (water, electricity, heating, telephone, internet) | |
| Irrigation water | |
| Clothes | |
| Health | |
| Education | |
| Seeds, fertilizers, and agricultural chemicals | |
| fuel for agriculture | |
| animal feed/health | |
| Specify others | |

| H. AVAILABLE SKILLS | |
|---|---|
| ☐Engineer | ☐Cleaner |
| ☐Chauffeur | ☐Security guard |
| ☐Machine operator | ☐Cook |
| ☐Master Construction worker (specify field ……) | ☐Office worker (secretary/accounting) |
| ☐unskilled construction worker | ☐Other (specify) |
| ☐Technician (specify field) | ☐Other (specify) |
| | ☐Other (specify) |

| I. HOUSEHOLD PROBLEMS | | | |
|---|---|---|---|
| Problems | Very important | Important | Not Important |
| I.1. Unemployment | | | |
| I.2. Low Income | | | |

| | | | |
|---|---|---|---|
| I.3. cost of living | | | |
| I.4. Security | | | |
| I.5. Transport | | | |
| I.6. Lack of educational services | | | |
| I.7. Inadequate water supply | | | |
| I.8. Insufficient electricity supply | | | |
| I.9. Inadequate housing conditions | | | |
| I.10. Waste Disposal | | | |
| I.11. Telecommunication | | | |
| I.12. Other | | | |
| I.13. Other | | | |
| I.14. Other | | | |
| I.15. What can be done to overcome the problems you mentioned, what are your opinions? | | | |

| J. USE OF NATURAL RESOURCES River Use | |
|---|---|
| Is there a river within the borders of the village/ neighborhood? | |
| For what purpose do you use this river? | |
| Will this river be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Forest Use | |
| Is there a forest within the borders of the village/ neighborhood? | |
| For what purpose do you use this forest? | |
| Will this forest be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Recreation Area | |
| Is there a recreation area within the borders of the village/ neighborhood? | |
| Do you use this recreation area for any purpose? | |

| | |
|---|---|
| Will this recreation area be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Marine Use | |
| How far is your village from the sea? | |
| Do you use the sea for tourism, transportation or fishing purposes? | |
| Will your sea use be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Cultural Areas | |
| Is there an area, building or tree of spiritual value in your village? | |
| Do you use this area? | |
| Will this area be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Source Water Use | |
| Is there spring water in your village? | |
| Do you use this water? If yes, for what purpose? | |
| Will water resources be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |
| Well Water Usage | |
| Is there well water in your village? | |
| Do you use this water? If yes, for what purpose? | |
| Will water resources be affected due to the project? | |
| What effect do you expect? | |
| What are your suggestions? | |

| L. PROJECT IMPACTS | | | |
|---|---|---|---|
| ECONOMY | | | |
| Do you expect an impact on local employment opportunities? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |

| Do you expect an impact on transportation facilities? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact on water infrastructure? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact on electrical infrastructure? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| POPULATION | | | |
| Do you expect any impact on the population? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation |

| | | | |
|---|---|---|---|
| | | | 3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact with project staff? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project temporarily or permanently affect your lands or the lands of local people? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| PUBLIC HEALTH AND SAFETY | | | |
| Do you expect any noise-related impact? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommisioning |
| Please Explain | | | |
| Suggestions | | | |

| | | | |
|---|---|---|---|
| Do you expect any impact related to dust? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact on traffic? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact on project water quality or level? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project create security problems? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |

| | | | |
|---|---|---|---|
| Will the project create problems with waste? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any impact from blasting? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Do you expect any other effects? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| INCOME SOURCES | | | |
| Will the project create physical displacement? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |

| | | | |
|---|---|---|---|
| | | | |
| Suggestions | | | |
| Will your income from agriculture be affected due to the project? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will your income from animal husbandry be affected due to the project? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project cause loss of pasture areas? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project cause loss of historical areas? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |

| | | | |
|---|---|---|---|
| Please Explain | | | |
| Suggestions | | | |
| Will the project cause the loss of cultural or spiritual sites? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project affect income from fishing? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |
| Will the project have an impact on income from tourism? | 1.☐ Yes<br>2.☐ No | 1. ☐Positive<br>2.☐ Negative | 1. ☐Construction<br>2.☐ Operation<br>3.☐ Decommissioning |
| Please Explain | | | |
| Suggestions | | | |

Are there any other projects within the borders of the neighbourhood that may have an impact during the construction or operation period?

# 1.0 CLIMATE CHANGE RISK ASSESSMENT

## 1.1 INTRODUCTION

Climate change is a multifaceted and complex issue that can lead to serious environmental and socioeconomic consequences and even threaten the security of countries. The impacts of climate change have become one of the most important challenges for the life of future generations.

- Within this framework stands the recent revision and release of the **Equator Principles , version IV**[1] (EP4) which is a risk management framework adopted by financial institutions for determining, assessing, and managing environmental and social risks in projects and is primarily intended to provide a minimum common standard for due diligence and monitoring to support responsible risk decision-making. The EP4 categorize projects that are financed by Equator Principles Financing Institutions (EPFIs) based on the environmental and social impacts that they generate and the risks that they may pose to financing. Category A projects have the highest risks, while category C is used for low-risk projects.

According to EP4, a Climate Change Risk Assessment (CCRA) is required to be undertaken:

- For Category A and, as appropriate, Category B projects. For these projects, the CCRA has to include consideration of relevant climate-related 'Physical Risks' as defined by the **Task Force on Climate-Related Financial Disclosure (TCFD)**[2].
- For all projects, in all locations, when combined Scope 1 and Scope 2 emissions are expected to be more than 100,000 tons of $CO_2$ equivalent annually. For these projects, the CCRA is to include considerations of climate-related 'transition risks' (as defined by the TCFD). The CCRA must also include a completed alternatives analysis which evaluates less greenhouse gas (GHG) intensive alternatives.

The TCFD Recommendations on Climate-related Financial Disclosures state that "*physical risks resulting from climate change can be event-driven (acute) or longer-term shifts (chronic) in climate patterns*". Even though this Project is not subject to the EP4, considering the increasing relevancy of climate change, a Climate Change Risk Assessment is being carried out as Good International Industry Practice (GIIP).

**Acute physical climate risks** can include increased severity and frequency of droughts, storms, floods and wildfires. **Chronic physical climate risks** can include sea level rise and longer-term temperature increase. Climate-related physical risks may include a variety of effects:

- Direct damage to assets, as a result of extreme weather events (i.e., drought, storms) or rising sea levels.
- Changes in water availability, sourcing and quality, often with consequent social impacts.
- Disruption to operations, ability to transport goods and supplies and impacts on employee/community safety, and more.

The Project's GHG inventory has been assessed for both construction and operation phases in consideration with Scope 1 and Scope 2 emissions to be emitted as a result of the Project activities. Based on that, annual GHG emissions for construction and operation phases of the Project are calculated as 96,256.4 t CO2e/year and 18,819.5 t CO2e/year, respectively, within the Section 7.1.7 of the ESIA Report. According to the outcomes of this analysis, a transition risks analysis has not been included in this risk assessment.

[1] The Equator Principles Association, 2020 (The Equator Principles_EP4_July2020 (equator-principles.com).

## 1.2 OVERVIEW OF THE CLIMATE CHANGE PHYSICAL RISK ASSESSMENT METODOLOGY

According to the **ISO 14091 Standard "Adaptation to climate change – Guidelines on vulnerability, impacts and risk assessment**[3]", the CCRA fulfils diverse objectives depending on the information needs of a client, and on challenges caused by climate change. These can include the following.

- **Raising awareness**: CCRA helps increasing awareness of the consequences of climate change.
- **Identification and prioritization of risks**: many factors contribute to a system's sensitivity, exposure and adaptive capacity. CCRA provides insight into these factors, and this helps the client to prioritize the risks to be addressed.
- **Identification of entry points for climate change adaptation intervention**: the final results and the process of the CCRA can help identifying possible adaptation responses. CCRA can show where early action is required.
- **Tracking changes in risk and monitoring and evaluating adaptation**: repeating CCRA can help to track changes over time and generate knowledge on the effectiveness of adaptation.

This section of the CCRA chapter presents an overview of the methodology for CCRA for physical risks and applies it to the current Project. The assessment will result in the identification of physical risks that may affect the Project within a certain time frame, and in a number of adaptative measures that the Project may consider and implement to mitigate these risks.

WSP developed a CCRA based on existing methodologies for the assessment of climate change risks and vulnerability as part of adaptation strategies. Guidelines and methodologies from the **ISO 14091** as well as the **Intergovernmental Panel on Climate Change (IPCC)**[4] and the **World Bank Group**[5] were used as a guidance for defining factors that contribute to determine the risks. These methodologies consider a variety of risk components whose definitions are as follows:

- Climate-related Hazard: natural or human induced climate-related hazard, such as flood, wildfire, extreme heat, that can occur at the Project Area. The changes in intensity of hazard related events and of their probability over-time are influenced by climate change.
- Exposure: the possibility for a Project in a specific site to be adversely affected by a certain hazard because of the presence of certain Project services, resources, infrastructures, people and other Project's intrinsic elements that are prone to be affected. A Project, depending on its intrinsic nature and characteristics, may or may not be exposed to a certain hazard that occur at the Project Area. Exposure is therefore an indicator of the fact that the Project "can or cannot be affected" by a certain hazard.
- Sensitivity: propensity or predisposition of elements of the Project to be affected by a certain hazard. Sensitivity is a measure of "how much" a Project exposed to a certain hazard can be affected.
- Adaptive capacity: the ability of the Project to adjust to climate hazard-related events, to mitigate potential damages, to take advantage of opportunities, or to respond to the consequences.

[3] ISO 14091 gives guidelines for assessing the risks related to the potential impacts of climate change. It describes how to understand vulnerability and how to develop and implement a sound risk assessment in the context of climate change.

[4] The Intergovernmental Panel on Climate Change (IPCC) is the United Nations body for assessing the science related to climate change.

[5] The World Bank Group (WBG) is a family of five international organizations that make leveraged loans to developing countries.

- Vulnerability: expresses the magnitude of potential effects and consequences of climate hazard-related events on elements of the Project. Vulnerability results from the combination of Sensitivity and Adaptive capacity.
- Risk: the result of the combination of Hazard probability or intensity at a certain time and the Vulnerability.

This methodology assesses different climate-related hazards independently, at present and in the future, over a time consistent with the temporal scope of the assessment, and according to different future carbon emission scenarios. For each specific hazard, the risk components are assigned a qualitative class (“i.e., “high”, “medium”, “low”) and then combined using qualitative matrices, as explained in Figure 1.The result is a class of Risk (“low”, “medium”, “high” or “extreme”) for each climate-related hazard considered in the analysis. The following figure shows risk assessment process for a specific hazard “h” the Project is exposed to.

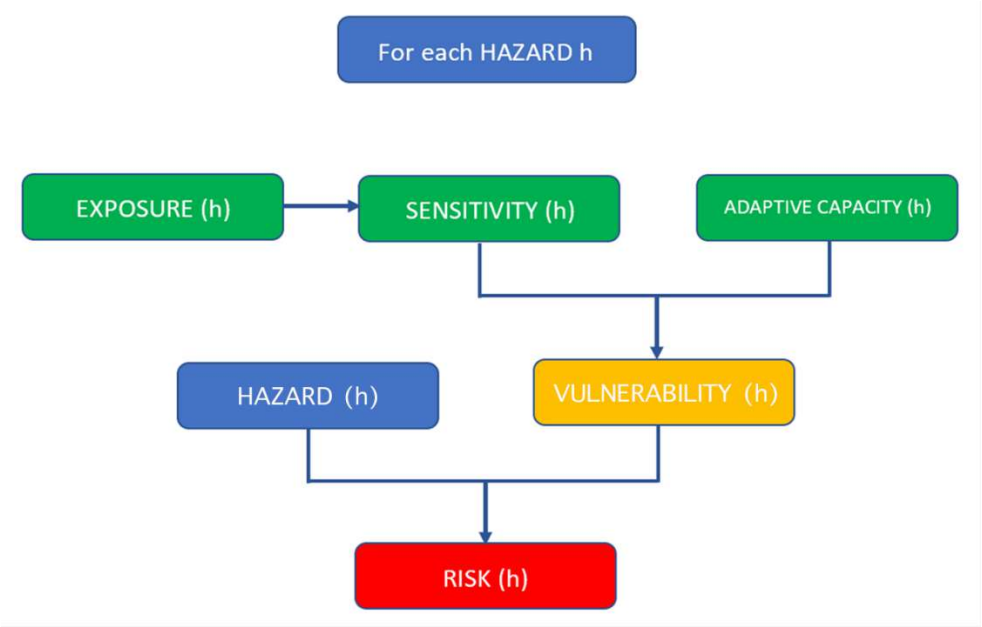

**Figure 1: Workflow of the risk assessment for a specific hazard “h” the Project is exposed to, showing how different risk factors are combined across the analysis.**

## 1.3 PHYSICAL RISKS ASSESSMENT

The CCRA that follows is referred to Kınalı-Malkara Motorway Project located in the north-western part of Türkiye. The 105.3 km Kınalı-Malkara Motorway Project will start from Silivri District of İstanbul Province and will pass through Marmaraereğlisi, Çorlu, Süleymanpaşa and Malkara districts of Tekirdağ Province. Project location and general layout of the Project are presented in Figure 2, respectively. The provinces and districts that Project will pass through between 0+000 km and 105+300 km are given in detail below.

- İstanbul Province, Silivri District (0+000 km - 17+700 km)
- Tekirdağ Province, Marmaraereğlisi District (17+700 km - 25+200 km)
- Tekirdağ Province, Çorlu District (25+200 km - 43+600 km)
- Tekirdağ Province, Süleymanpaşa District (43+600 km - 95+600 km)
- Tekirdağ Province, Malkara District (95+600 km - 105+272 km)

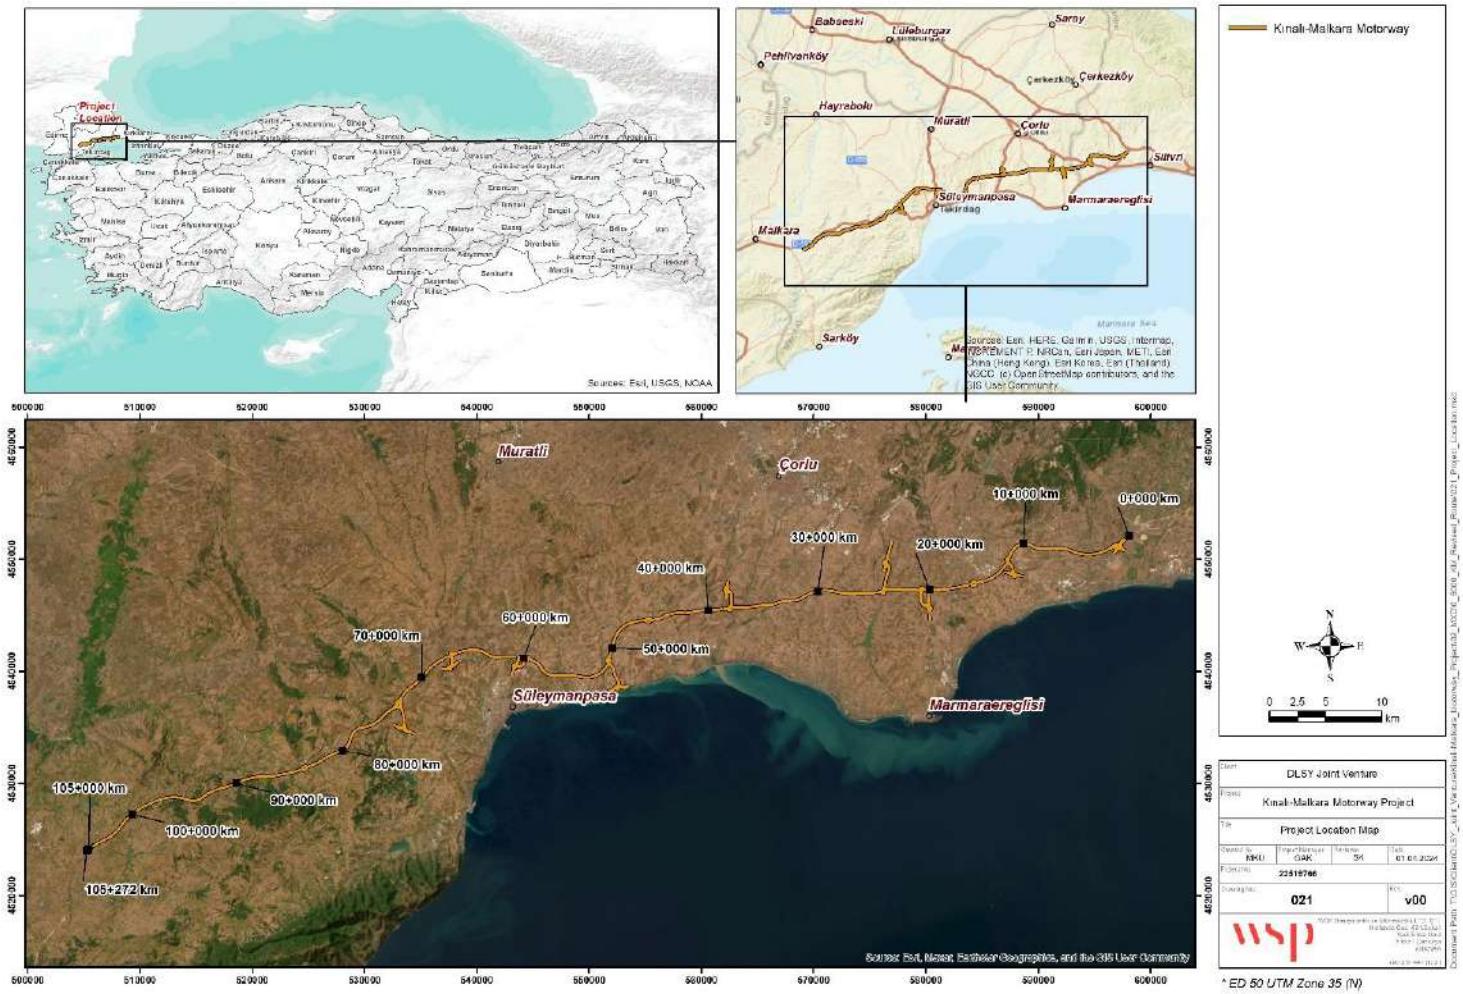

**Figure 2: Kınalı-Malkara Motorway Route Project Location**

The CCRA takes into consideration all project facilities as described in the Kınalı Malkara Motorway Project ESIA.

In particular, the CCRA focuses on Project components that could potentially be affected by climate-related hazards, related to motorway itself, the main structures of the motorway (overpasses, underpasses, culverts and interchanges), side infrastructures (such as light poles), motorway service facilities, energy transmission lines and substations.

### 1.3.1 Assessment of Hazards

#### *1.3.1.1 Climate Overview – Country level*

Türkiye is located between subtropical and temperate zones. It experiences Mediterranean, Black Sea, Terrestrial, and Marmara climates, with hot and dry summers, mild and rainy winters, cool summers with warm and snowy coastal winters, large temperature differences between seasons and days, and a transitional climate between the others. Türkiye experiences more rainfall in winter and spring, with less precipitation and higher temperature and evaporation in summer.

Tekirdağ has a temperate climate, with warm summers and mild winters. The region experiences a Mediterranean climate, characterized by hot, dry summers and mild, wet winters. The average temperature in the summer months of June to August is around 25°C, while the winter months of December to February have an average temperature of around 7°C. Tekirdağ receives moderate rainfall throughout the year, with the wettest months being November and December. The prevailing winds in the region are from the northwest, with occasional gusts from the south.

#### *1.3.1.2 Climate Overview – Local level*

A high-level characterization of the site climatology has been performed using the dataset from Copernicus ERA5-Land (European ReAnalysis version5). ERA5-Land provides hourly estimates of numerous atmospheric, terrestrial and oceanic climatic variables. The data covers the Earth on a 30 km grid and resolves the atmosphere using 137 levels from the surface to an altitude of 80 km. Information on uncertainties is also provided for variables with low spatial and temporal resolutions. Quality assured monthly updates of ERA5 (1959 to present) are released within 3 months in real time. Preliminary daily dataset updates are available to users within 5 days in real time.

**HISTORICAL TEMPERATURES**

The graph in Figure 3 shows the mean temperature (°C) from 1951 to 2020 with trend lines for different periods. The overall trend from 1951 to 2020 (yellow) indicates an increase in mean temperature, from about 13.5°C to approximately 15.0°C. The trend from 1971 to 2020 (green) shows a more significant increase, from around 13.5°C to 15.2°C. The most recent period from 1991 to 2020 (dark green) indicates an even steeper rise, starting from roughly 14.0°C to 15.6°C. These trends clearly suggest a significant long-term warming trend, with mean temperatures rising consistently, particularly in recent decades.

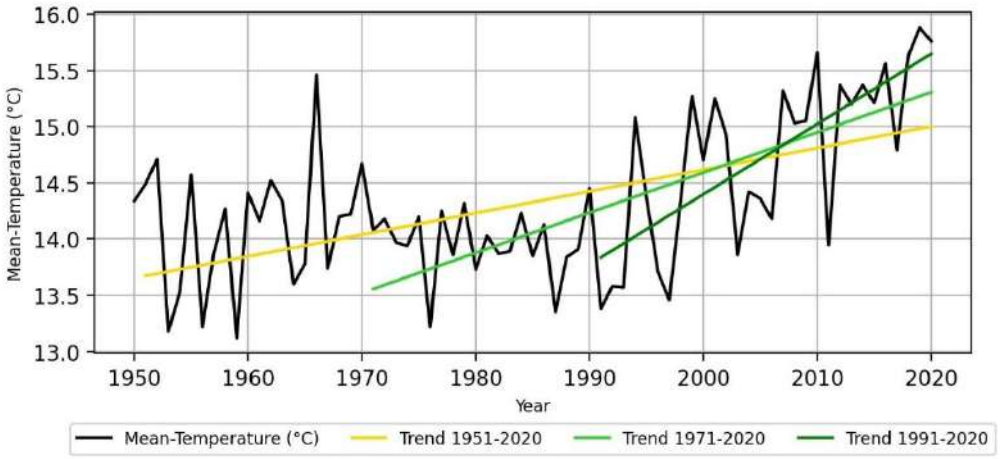

**Figure 3: Annual average in daily mean temperature in the historical period (1950-2020) from ERA5-Land.**

The graph in Figure 4 shows the maximum of daily maximum temperatures (°C) from 1951 to 2020 with trend lines for different periods. The overall trend from 1951 to 2020 (yellow) indicates a gradual increase, from about 33.5°C to approximately 34.5°C. The trend from 1971 to 2020 (green) shows a more noticeable increase, from around 34.0°C to 35.5°C. The most recent period from 1991 to 2020 (dark green) indicates a further rise, starting from roughly 34.0°C to 36.0°C. These trends suggest a long-term warming trend, with the maximum of daily maximum temperatures rising consistently, particularly in recent decades. This indicates that climate change has been contributing to higher peak temperatures over the observed period.

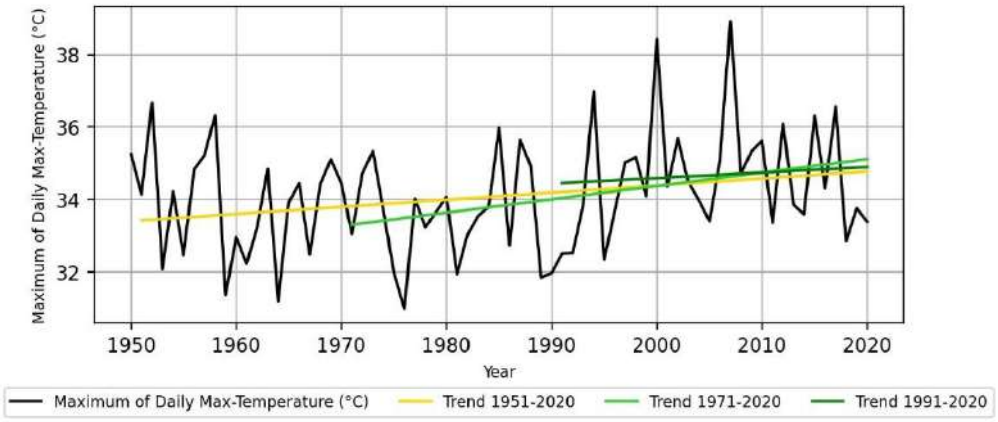

**Figure 4: Annual average in daily max temperature in the historical period (1950-2020) from ERA5-Land.**

## HISTORICAL PRECIPITATIONS

The graph in Figure 5 shows annual precipitation from 1951 to 2020 with trend lines for different periods. The overall trend from 1951 to 2020 (yellow) indicates a slight decrease in precipitation, from approximately 700 mm to around 650 mm. However, more recent periods (1991-2020 in dark green) show increasing trends, with the 1971-2020 period decreasing from about 670 mm to 630 mm and the 1991-2020 period rising from roughly 630 mm to 680 mm. This suggests a shift in climatic patterns with increased annual precipitation variability in recent decades. No significant long-term trends emerge, indicating that while there are periods of increase, the overall historical trend remains relatively stable.

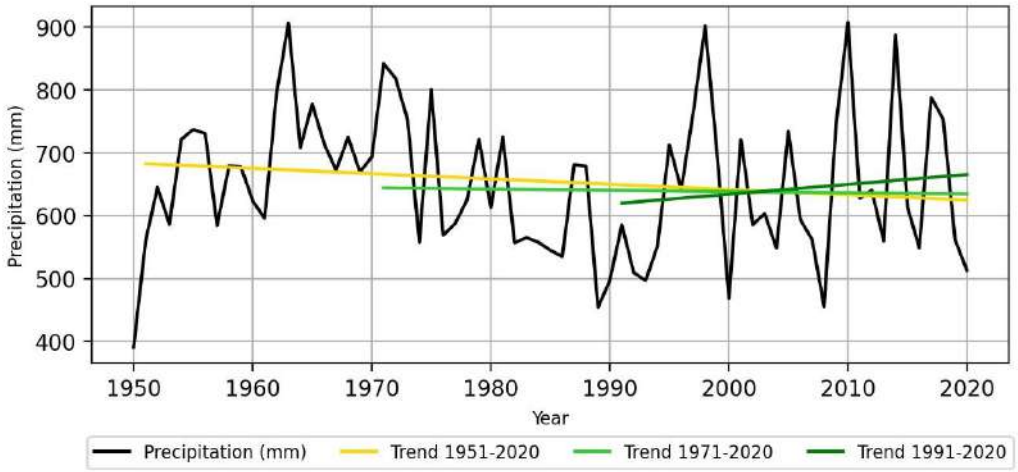

**Figure 5: Total annual precipitation in the historical period (1950-2020) from ERA5-Land.**

The graph in Figure 6 presents the largest 1-day precipitation events from 1951 to 2020, along with trend lines for different periods. The overall trend from 1951 to 2020 (yellow) shows a slight increase, from around 35 mm to about 37 mm. The trend from 1971 to 2020 (green) indicates a slight increase, from approximately 35 mm to 38 mm. The most recent period from 1991 to 2020 (dark green) also shows a slight decrease, starting from about 38 mm to 36 mm. These trends suggest that while there has been variability in the largest 1-day precipitation events, there is no significant long-term change, with recent decades showing a minor decrease in these extreme events.

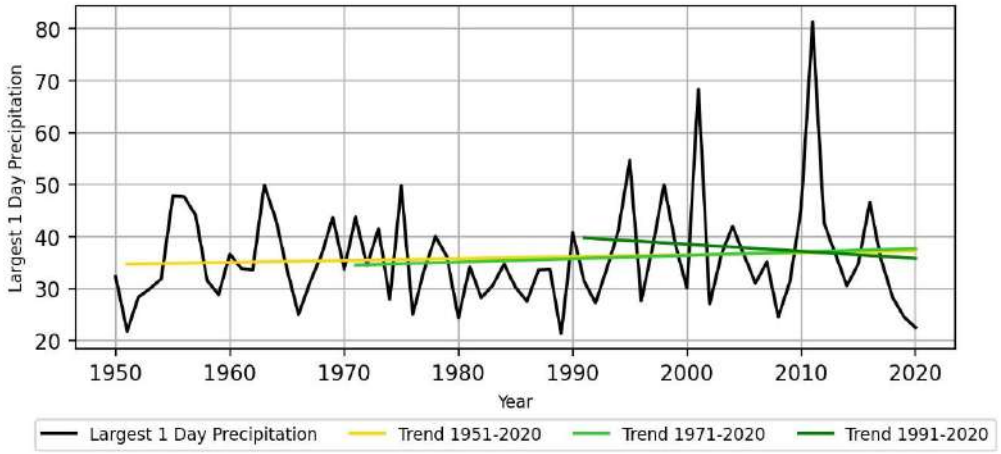

**Figure 6: Max 1 day precipitation in the historical period (1950-2020) from ERA5-Land.**

The graph in Figure 7 shows the maximum number of consecutive dry days from 1951 to 2020 with trend lines for different periods. The overall trend from 1951 to 2020 (yellow) indicates a slight decrease, from about 39 days to approximately 36 days. The trend from 1971 to 2020 (green) shows a small increase, from around 36 days to 37 days. The most recent period from 1991 to 2020 (dark green) shows a minor decrease, from roughly 38 days to 36 days. These trends suggest that while there has been some variability in the number of consecutive dry days, there is no significant long-term change, with recent decades showing a minor increase in the duration of dry periods. This indicates that climate variability has affected dry spells, but there is no substantial long-term trend in their length.

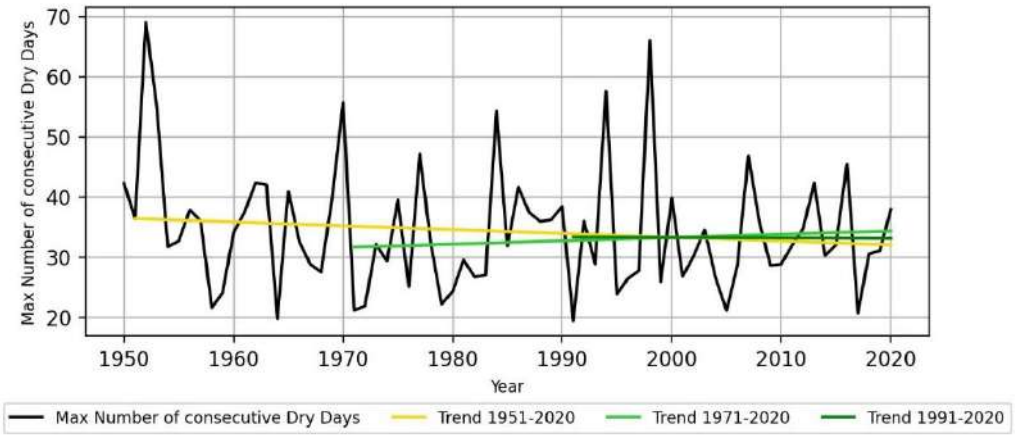

**Figure 7: Annual number of dry days in the historical period (1950-2020) from ERA5-Land.**

Climatic future projections have been assessed using data extracted from the **Coupled Model Intercomparison Project Phase 6 (CMIP6).** The downscaled version **Global Daily Downscaled Projections (NEX-GDDP-CMIP6)** produced and distributed by NASA has been used.

The extrapolated data refer to 3 possible $CO_2$ emission scenarios:

- SSP1 - 2.6 scenario (or SSP126), which foresees the drastic reduction of $CO_2$ emissions and the achievement of net zero emissions after 2050;
- SSP2 - 4.5 (or SSP245) scenario, assuming a reduction in $CO_2$ emissions without reaching net zero;
- SSP5 - 8.5 (or SSP585) scenario, which based on the hypothesis of doubling the current $CO_2$ emission levels by 2050.

The predicted median values are described for each variable considered and correspond to the functions represented through continuous lines in the graphs below. All forecast models consider 2015 as the starting year (the baseline year is 2014 and refers to the last historical data recorded).

In the evaluation of the historical period emerged that the area has experienced an increase in temperature, while water-related metrics does not show significant trends.

**FUTURE TEMPERATURES**

Average temperature is expected to increase in all considered scenarios as can be seen from Figure 8. In the SSP1-2.6 scenario, the increase is about 0.02°C/year, with the absolute temperature expected to reach around 16°C by 2100, with a 10th to 90th percentile range between 14.5°C and 17.5°C. In the SSP2-4.5 scenario, the projected increase is approximately 0.03°C/year, reaching about 17.5°C by 2100, with a range between 15.5°C and 18°C. In the SSP5-8.5 scenario, the increase is about 0.06°C/year, with temperatures potentially rising to around 21°C by 2100, and a range between 18°C and 21°C.

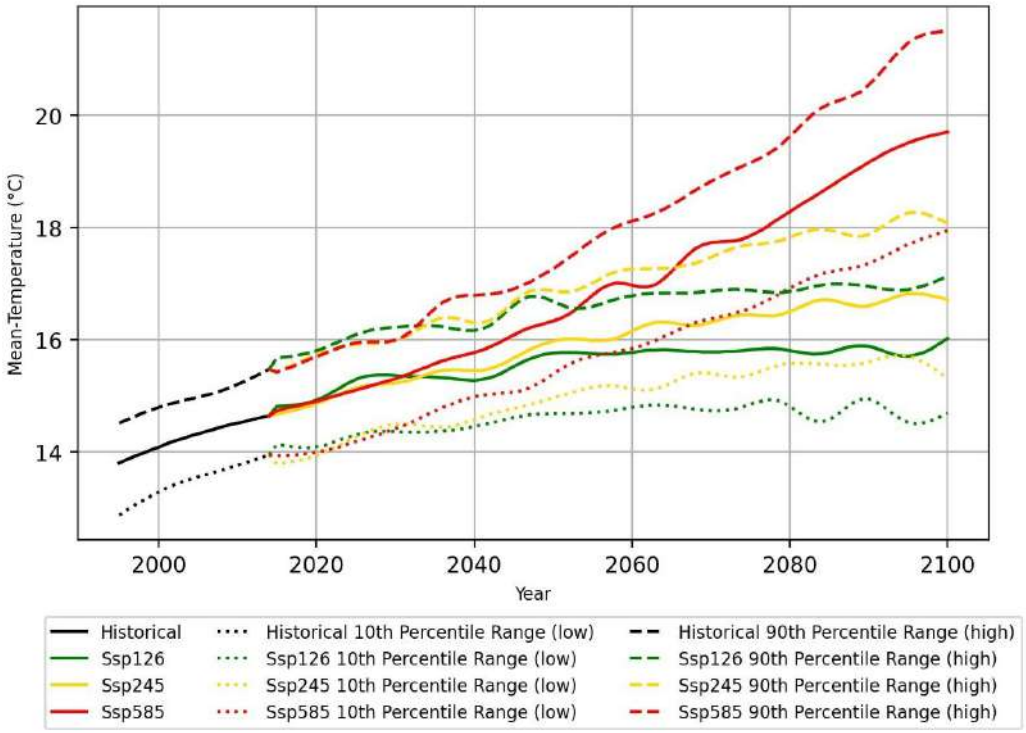

**Figure 8: Annual average temperature in climate models (CMIP6) for the historical period (1950-2014) and the future projections (2015-2100) in the three SSPs considered. Linear trends for the multi-model ensemble mean are highlighted.**

## FUTURE PRECIPITATIONS

Precipitation is projected to change under all considered scenarios as can be seen from Figure 9 In the SSP1-2.6 scenario, precipitation is expected to remain relatively stable around 580 mm/year, with slight fluctuations within a 10th to 90th percentile range of approximately 350 to 850 mm/year. In the SSP2-4.5 scenario, a slight decrease is projected, with precipitation dropping to around 550 mm/year by 2100, and a range between 520 and 580 mm/year. The SSP5-8.5 scenario predicts a more significant decrease, with precipitation expected to fall to around 450 mm/year by 2100, within a range of 450 to 580 mm/year.

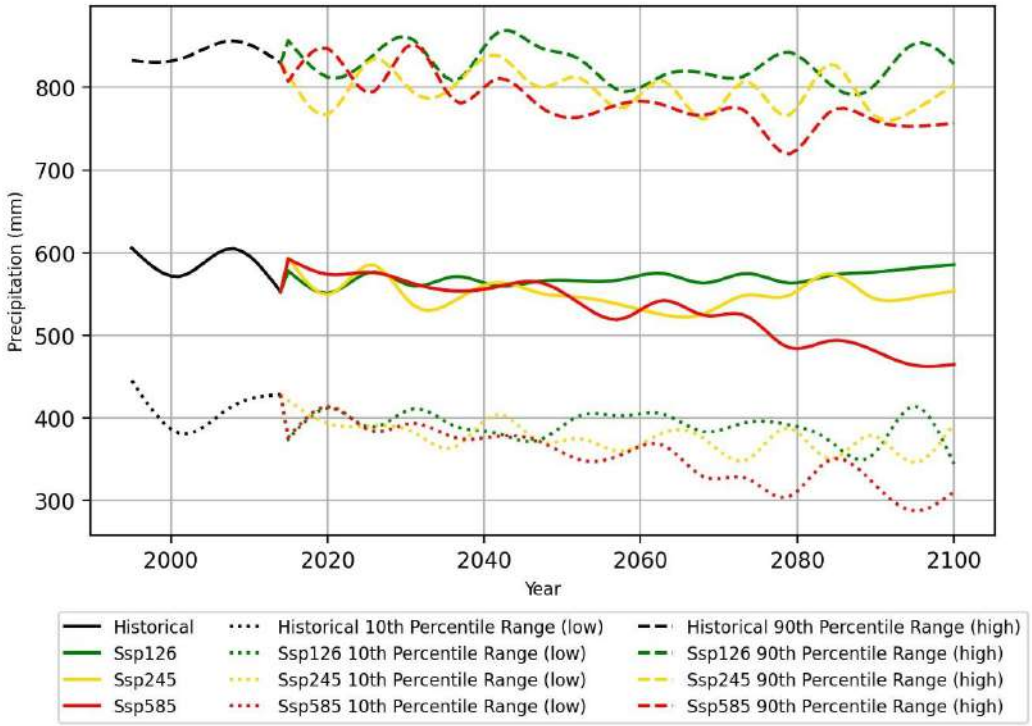

**Figure 9: Annual cumulated precipitation in climate models (CMIP6) for the historical period (1950-2014) and the future projections (2015-2100) in the three SSPs considered.**

#### *1.3.1.3 Identification of Relevant Climate-related Hazards*

According to ISO 14091, the first step in the CCRA requires to identify the climate-related hazards that may affect the Project Area and, among them, those the Project may be exposed to. Additional available literature (i.e., IPCC Report on Impacts, Adaptation and Vulnerability, UNEP Finance Initiative[6], World Bank National & Policy Climate and Disaster Risk Screening tool[7], ) was considered to define a framework and guide the hazard identification process.

Key questions to consider in the hazard identification process are the following:

- Which are the past events and what are the main issues that affected the site and may be related to climate change?
- Which are the climate-related hazards that may become relevant in the future?

Information from World Bank Group – Climate Change Knowledge Portal, Vulnerability section, were consulted to identify the most relevant hazards might be caused by climate change at the Country level. In addition to this, THINK HAZARD portal[8] (implemented by Global Facility for Disaster Reduction and Recovery (GFDRR) in collaboration with World Bank and providing high level hazard assessment worldwide) was used to refine the investigation at the level of the Tekirdağ Province.

[6] United Nations Environment Programme Finance Initiative (UNEP FI) is a partnership between UNEP and the global financial sector to mobilize private sector finance for sustainable development.

[7] Climate and Disaster Risk Screening represents a proactive approach to considering short- and long-term climate and disaster risks in project and national/sector planning processes.

[8] https://thinkhazard.org/en/

The outcomes of this processes resulted in the following list of selected hazards. They are listed together with the main justification for their inclusion in the risk assessment.

**Extreme Heat Hazard**

High temperatures are expected to increase faster than average temperatures. Thus, extreme heat hazards are expected to raise in frequency and intensity. Under the pessimistic scenario, this increase could double the number of hot days per year (T>35°C), exceeding the threshold of 100 days/year.

Even if there is a large spread between scenarios, the increase in average and maxima temperatures is expected to reach values hazardous to public health even under the optimistic scenarios. Therefore, this hazard has been scoped in for the climate change risk assessment.

**Extreme Cold Hazard**

The meteorological characteristics of Tekirdağ are characterized by a mild and temperate climate, with an average annual temperature of 15°C. The summers are warm with temperatures up to an average of 25°C, while the winters are cool with an average temperature around 5°C. As a consequence of overall increasing temperatures, extreme cold days will become less frequent in the future, according to all climate scenarios. Thus, extreme cold hazard has been scoped out for the climate change risk assessment.

**Wildfires Hazard**

According to the THINK HAZARD portal, the wildfire hazard in Tekirdağ is classified as high. This means there is greater than a 50% chance of encountering weather that could support a significant wildfire, likely resulting in both life and property loss in any given year. Damage can occur not only due to direct flame and radiation exposure but also from ember storms and low-level surface fires. Strong winds and windborne debris during extreme fire weather events may also weaken infrastructure integrity. Two neighbourhoods in Tekirdağ's Malkara district were evacuated in 2023 due to wildfires[9]. Therefore, this hazard has been scoped in for the climate change risk assessment.

**Strong Wind Hazard**

Strong winds may become more frequent or intense due to climate change in the region. This can exacerbate existing vulnerabilities and increase the frequency of hazards. Thus, this hazard has been scoped in for the climate change risk assessment.

**Severe Storms Hazard**

Increase in temperatures can enhance the atmospheric moisture and disrupt weather patterns, leading to more extreme and frequent storm events. Therefore, severe storms hazard has been scoped in for the climate change risk assessment.

**Extreme Precipitations Hazard**

Increase in temperatures is expected to probability of extreme weather events, including extreme precipitations. Therefore, this hazard has been scoped in for the climate change risk assessment.

**Flooding Hazard**

Tekirdağ Province is considered at high risk of flooding. Historical events have shown the region's vulnerability, with significant floods causing substantial damage to infrastructure and impacting local communities. Notably,

[9] https://www.independent.co.uk/news/world/europe/europe-heatwave-wildfires-pictures-greece-b2377178.html

severe weather in early September 2009 produced record-setting rainfall amounts across the Marmara region, leading to a series of flash floods that severely affected İstanbul and Tekirdağ provinces[10]. Climate change is expected to increase the frequency and intensity of extreme precipitation events, leading to more frequent and severe flooding.

Flood hazard is classified as high based on modelled flood information currently available to **THINK HAZARD portal**. This means that potentially damaging and life-threatening urban floods are expected to occur at least once in the next 10 years. Therefore, this hazard has been scoped in for the climate change risk assessment.

**Drought Hazard**

Drought events may become more frequent and intense since higher temperatures can lead to greater evaporation rates, reducing soil moisture and water availability. Additionally, shifting precipitation patterns may result in less reliable rainfall, making dry periods more frequent and severe. Therefore, drought hazard has been scoped in for the climate change risk assessment.

**Landslide Hazard**

The landslide hazard was evaluated within the Section 7.1.2 of the ESIA Report and also determined to be an indirect impact, primarily linked to extreme precipitation and severe storms. Given that landslides typically result from intense rainfall events rather than drought or other conditions, this risk is closely tied to weather extremes such as severe storms. Additionally, there is no Jupiter data available to provide future forecasts for such events, which limits the ability to precisely predict landslide risks over time. Therefore, landslides are considered a potential indirect impact tied to extreme precipitation and severe storms rather than a primary concern for the Project. Therefore, landslide hazard has been scoped out from the risk assessment.

**Erosion Hazard**

The erosion hazard was evaluated within the Sections 7.1.3 and 7.1.4 of the ESIA Report and also identified as an indirect impact, primarily associated with extreme precipitation and severe storms. Erosion risks are closely linked to heavy rainfall and storm events, which can increase surface runoff and soil degradation. Additionally, there is no Jupiter data available to provide future forecasts for such events, which limits the ability to precisely predict erosion risks over time. As a result, erosion is considered a potential indirect impact tied to extreme precipitation and severe storms rather than a primary concern for the Project. Therefore, erosion hazard has been scoped out from the risk assessment.

**Sea Level Rise Hazard**

According to the **THINK HAZARD portal**, coastal flood within the Project Area is classified as very low. This means that there is less than a 10% chance of potentially-damaging waves occurring in the next 10 years. Additionally, according to the **Climate Central**, based on the IPCC 2021 projections no sea level rise is anticipated for the Project Area (especially for the sections of the route around KM: 50+000) throughout the Project lifetime. The projections indicate that while global sea levels are expected to rise, Tekirdağ's coastal region will not experience any changes that could impact the infrastructure or operations of the Project. As a result, sea level rise has been scoped out from the climate change risk assessment.

[10]https://www.researchgate.net/publication/257632799_Analysis_of_the_Marmara_flood_in_Turkey_7-10_September_2009_An_assessment_from_hydrometeorological_perspective

#### 1.3.1.4 Exposure Assessment

Once hazards potentially affecting the Project Area were identified, the exposure of the Project to each hazard was assessed. The key question in the exposure assessment is the following:

- In case of any of the selected climate-related hazard hitting the Project Area, would the Project be impacted?

The evaluation in Table 1 considered the intrinsic characteristics and features of the Project.

**Table 1: Exposure assessment**

| Exposure | | |
|---|---|---|
| HAZARD | EXPOSURE (YES/NO) | RATIONALE FOR EXPOSURE |
| **Extreme Heat** | YES | Extreme heat would accelerate the deterioration of the road. Users would certainly be affected by extremely high temperatures as well. |
| **Wildfire** | YES | In case of wildfires both users and infrastructures would be affected. |
| **Strong Wind** | YES | Strong wind conditions could cause trees or light poles to fall on the road, resulting in service disruptions and damages to infrastructures, representing a potential threat for users as well. |
| **Severe Storms** | YES | Severe storms characterized by intense precipitations and strong wind could cause flooding, trees or light poles to fall on the road and other disruptions, representing a potential threat for users as well. |
| **Extreme Precipitations (rain)** | YES | Extreme precipitations could affect the road surface, with flooding and related disruptions and interruptions, representing a potential threat for users as well. |
| **Flooding** | YES | In case of flooding the road would certainly be exposed as water could damage the infrastructure and create disruptions to users. |
| **Drought** | NO | Drought could potentially expose the motorway and its structures to indirect challenges, such as soil instability or changes in groundwater levels, which may affect the surrounding environment or require additional maintenance efforts.<br><br>However, motorway is designed to withstand a variety of weather conditions, including dry spells, and the materials used in its construction, such as asphalt and concrete, are resilient to a range of temperatures and weather variations. While the climate where the Project is located, includes hot, dry summers, it does not experience extreme or prolonged droughts that would threaten the structural integrity of the motorway. Short-term drought conditions do not directly impact the durability of the motorway or its materials, as they are built to endure such variations. Therefore, drought is not considered a significant risk to the Project. |

The Project was considered exposed to all relevant climate-related hazards potentially affecting the Project Area. Therefore, all of them were scoped in for further assessment.

#### 1.3.1.5 Hazards Input Data

Climate Score Global 2.7, implemented by Jupiter Intelligence[11], was used as the data source for assigning a class of either probability or intensity to each scoped-in climate-related hazard.

Climate Score Global quantifies climate-related hazards at any given location globally predicting how future climate conditions will influence the intensity or the frequency of extreme meteorological events or natural disasters such as future floods, extreme heat events and droughts. The tool employs dozens of respected climate models coupled with machine learning, land use and elevation data, as well as models for hydrology, and severe weather. Data present a very high spatial resolution (90-meter globally), quantifying a set of hazards-specific metrics in 5-year increments from 2020 through 2100 (plus the baseline 1995 which was evaluated and incorporated by Climate Score Global itself for the future predictions) and for three climate scenarios, made by a combination of Shared Socioeconomic Pathways (SSPs) and Representative Concentration Pathways (RCPs) [12]:

- Optimistic scenario: projected socioeconomic global changes towards sustainability (SSP1). Carbon dioxide emissions start declining by 2020 and go to zero by 2100 (RCP2.6).
- Intermediate scenario: projected socioeconomic global changes do not shift markedly from historical patterns (SSP2). Emissions reach the peak around 2040, then decline (RCP4.5).
- Pessimistic scenario: projected socioeconomic global changes towards deeper fossil-fuelled development (SSP5). Emissions continue to rise throughout the entire 21st century (RCP8.5).

Data come in a spreadsheet where a representative location of the Project (identified with longitude and latitude coordinates) is assigned multiple metrics (data type numerical values or bands) and qualitative classes for each hazard.

Table 2 shows as an example the metrics provided to characterize the Extreme Heat hazard while Figure 10 provides an example of classification criteria:

**Table 2: Overview of all metrics provided to characterize the Extreme Heat hazard**

| Metric | Description | Example |
|---|---|---|
| HT_days Exceeding*C_mean | Days per year with temperature >35°C or >38°C based on the mean of the high temperature distribution from Global Circulation Models 13(GCMs). | 14 |
| HT_days Exceeding*C_band | Band that HT_daysExceeding*C_mean maps to. | 10-20 days |
| HT_days Exceeding*C_lower | Days per year with temperature >35°C or >38°C based on the 5th percentile of the high temperature distribution from GCMs. | 10 |
| HT_days Exceeding*C_upper | Days per year with temperature >35°C or >38°C based on the 95th percentile of the high temperature distribution from GCMs. | 19 |

[11] Climate Score Global https://jupiterintel.com/products/

[12] Shared Socioeconomic Pathways (SSPs) are scenarios of projected socioeconomic global changes up to 2100. They are used to derive greenhouse gas emissions scenarios with different climate policies. Representative Concentration Pathways (RCPs) are greenhouse gas concentration possible future trajectories adopted by the IPCC.

[13] Global Circulation Models (GCMs) are numerical models representing physical processes in the atmosphere, ocean, cryosphere and land surface. They are the most advanced tools currently available for simulating the response of the global climate system to increasing greenhouse gas concentrations.

| Metric | Description | Example |
|---|---|---|
| HT_daysExceeding99Pct_mean | Days per year with temperature exceeding the local historical 99th percentile temperature based on the mean of the high temp. distribution from GCMs. | 5 |
| HT_daysExceeding99Pct_band | Band that HT_daysExceeding99Pct_mean maps to. | 5-10 days |
| HT_daysExceeding99Pct_lower | Days per year with temperature exceeding the local historical 99th percentile temperature based on the 5th percentile of the high temperature distribution from GCMs. | 7 |
| HT_daysExceeding99Pct_upper | Days per year with temperature exceeding the local historical 99th percentile temperature based on the 95th percentile of the high temperature distribution from GCMs | 1 |

| Metric | Tier | Label | Min Value | Max Value |
|---|---|---|---|---|
| daysExceeding*C daysExceeding99Pct | Lowest | < 5 days | 0 | 5 |
| daysExceeding*C daysExceeding99Pct | Low | 5-10 days | 5 | 10 |
| daysExceeding*C daysExceeding99Pct | Medium | 10-20 days | 10 | 20 |
| daysExceeding*C daysExceeding99Pct | High | 20-30 days | 20 | 30 |
| daysExceeding*C daysExceeding99Pct | Highest | > 30 days | 30 | 365 |

**Figure 10: Classification criteria for the metrics of Extreme Heat hazard.**

### *1.3.1.6 Hazards Characterization*

Considering the significant extension of the road a multi-location approach has been adopted for characterizing hazards. Jupiter's Hazard Input data were obtained for the 20 locations distributed with 5 km spacing along the road, identified through their coordinates. The locations selected for the hazard characterization is presented in the Figure 11 below.

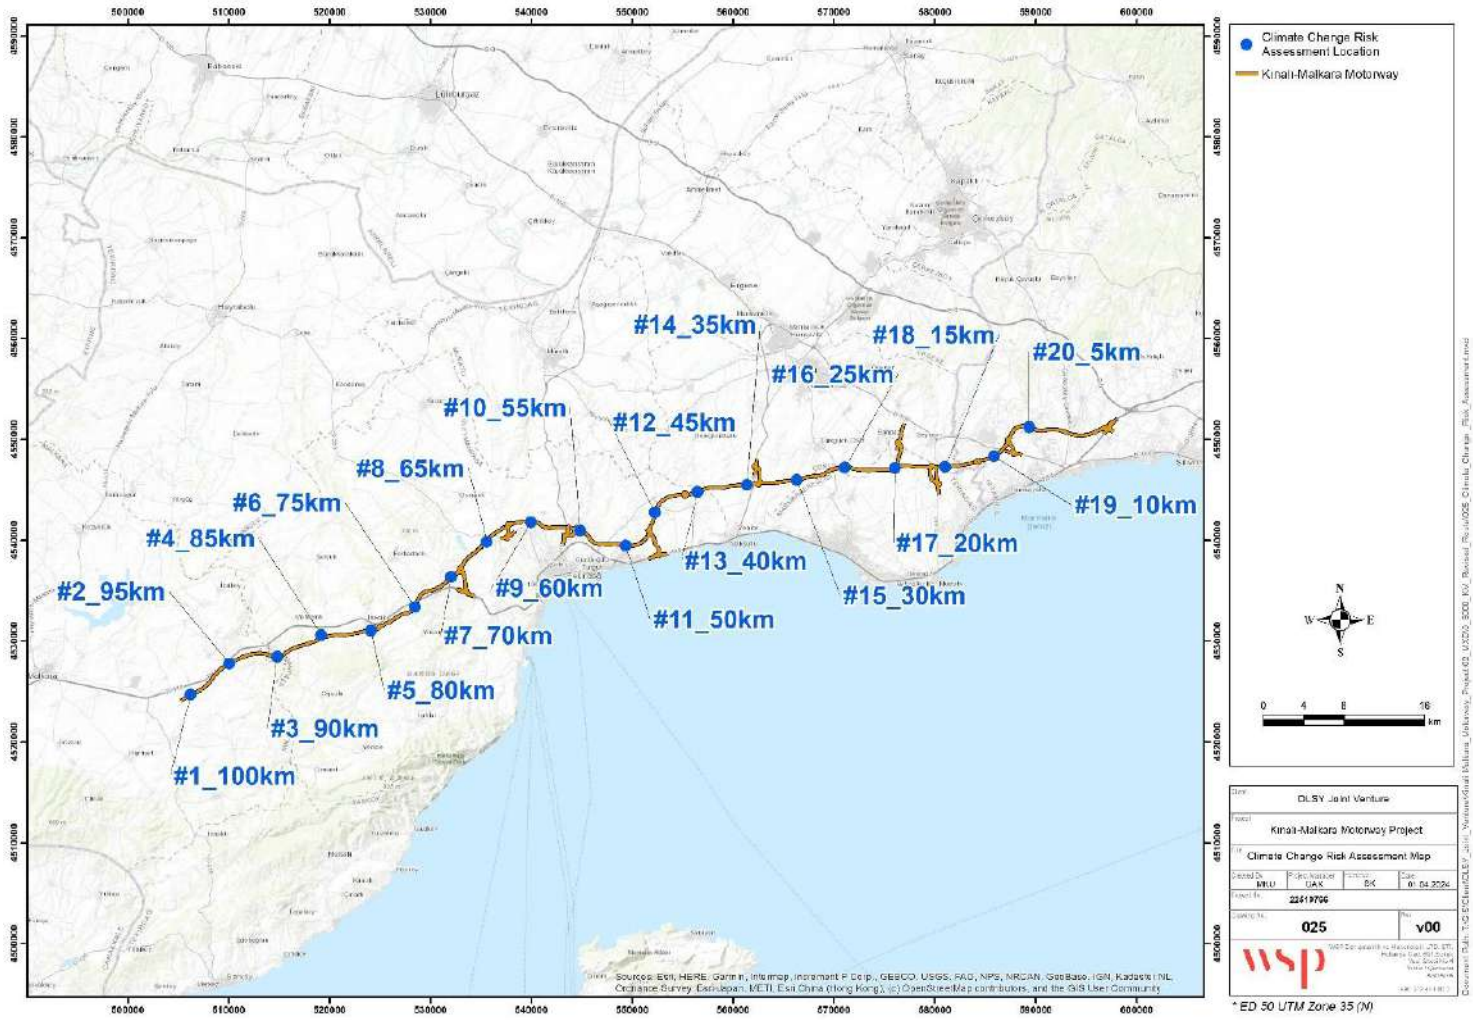

**Figure 11: Locations selected for hazard characterization in the Climate Change Risk Assessment**

Among all possible metrics available, the most representative were selected for each hazard. They are shown in Table 3.

**Table 3: Most representative metrics selected to characterize each hazard**

| HAZARD | METRIC |
|---|---|
| **Extreme Heat** | Days per year with temperature exceeding the local historical 99$^{th}$ percentile temperature. |
| **Wildfires** | Mean annual number of wildfires, which ignite and grow to detectable size, that are expected in a 1 sq km grid cell. |
| **Strong Wind** | Maximum 1-minute sustained wind speed (in km/hr) experienced at the 100-year return period. |
| **Severe Storms** | Number of days per year where environmental conditions are conducive to severe thunderstorm formation. |
| **Extreme Precipitations (rain)** | Maximum daily total water equivalent precipitation (in mm) experienced at the 100-year return period. |
| **Flooding** | Mean depth of the water (in meters) at the 100-year return period. |

According to the Hazard input data and the metrics considered, the following are the main considerations to describe the scoped-in hazards and their evolution over time at the Project Area. For each Hazard, the related figure shows the evolution across the time period covered by Jupiter data.

The temporal scope of the assessment covers the period 2020-2100.This temporal scope seems extended enough considering that a road infrastructure project for its own intrinsic characteristics and purpose does not have a predetermined life span but it is expected to be designed and built to last as much as possible.

According to the selected metrics and the scenarios available, the following are the main considerations to describe the level of each hazard at present and in the future according to all emission scenarios available. Horizontal grey dashed lines represent the hazard class limits.

**EXTREME HEAT HAZARD**

Extreme Heat is a significant hazard at the Project Area. According to the selected metric and classification criteria given below, the number of days with temperatures above the local average maximum temperatures increases in all locations during the temporal scope and for all scenarios. For the optimistic scenario, in 2040 the hazard level for all locations is between low and medium. In the intermediate scenario the trend is similar but with higher increase, in particular after 2060, numbers are significantly higher for all locations compared to the optimistic scenario. The trend again is similar but with an even higher increase for the pessimistic scenario. In 2100, all locations are in the “High” hazard level.

**Table 4: Classification criteria for the Extreme Heat Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | > 30 days |
| High | 20-30 days |
| Medium | 10-20 days |

| Hazard Level | Threshold |
|---|---|
| Low | 5-10 days |
| Lowest | < 5 days |

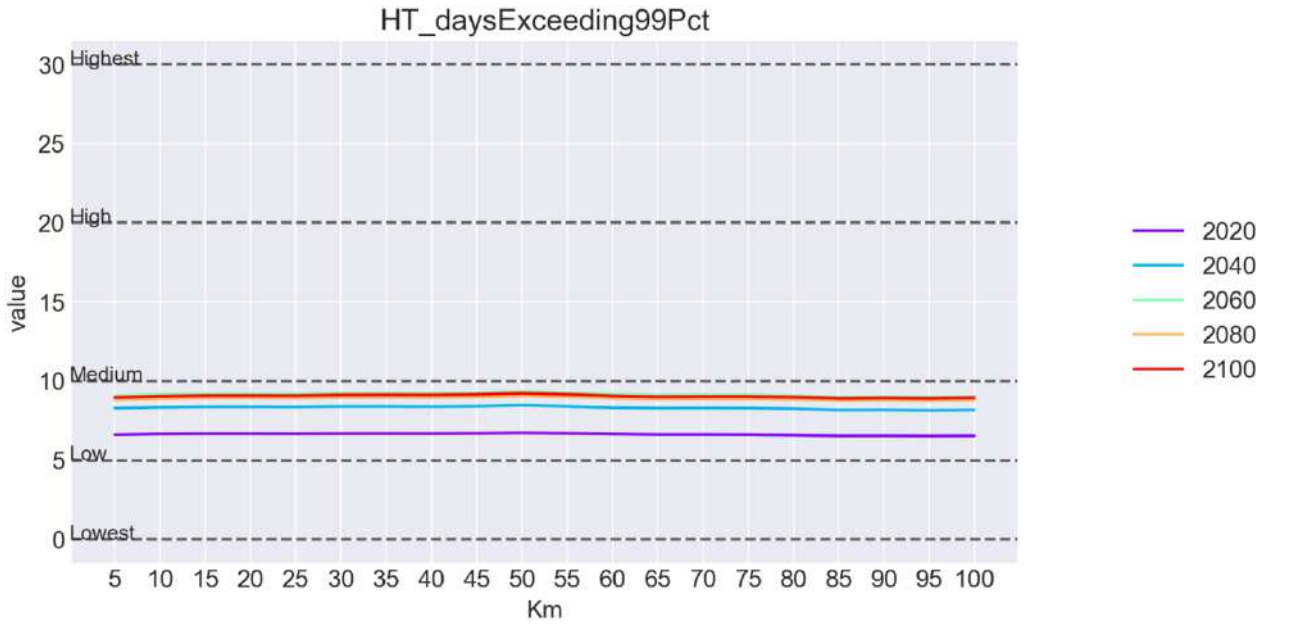

**Figure 12: Extreme Heat hazard, represented by the number of days per year with temperature exceeding the local historical 99th percentile temperatures – Optimistic Scenario.**

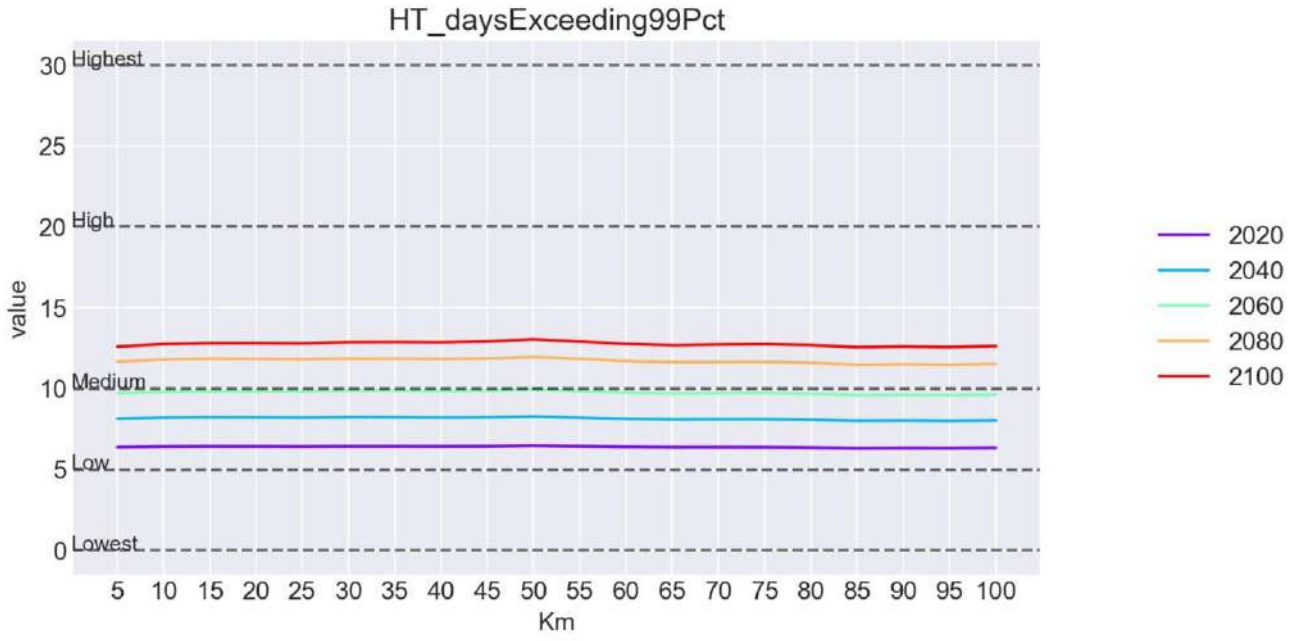

**Figure 13: Extreme Heat hazard, represented by the number of days per year with temperature exceeding the local historical 99th percentile temperatures – Intermediate Scenario.**

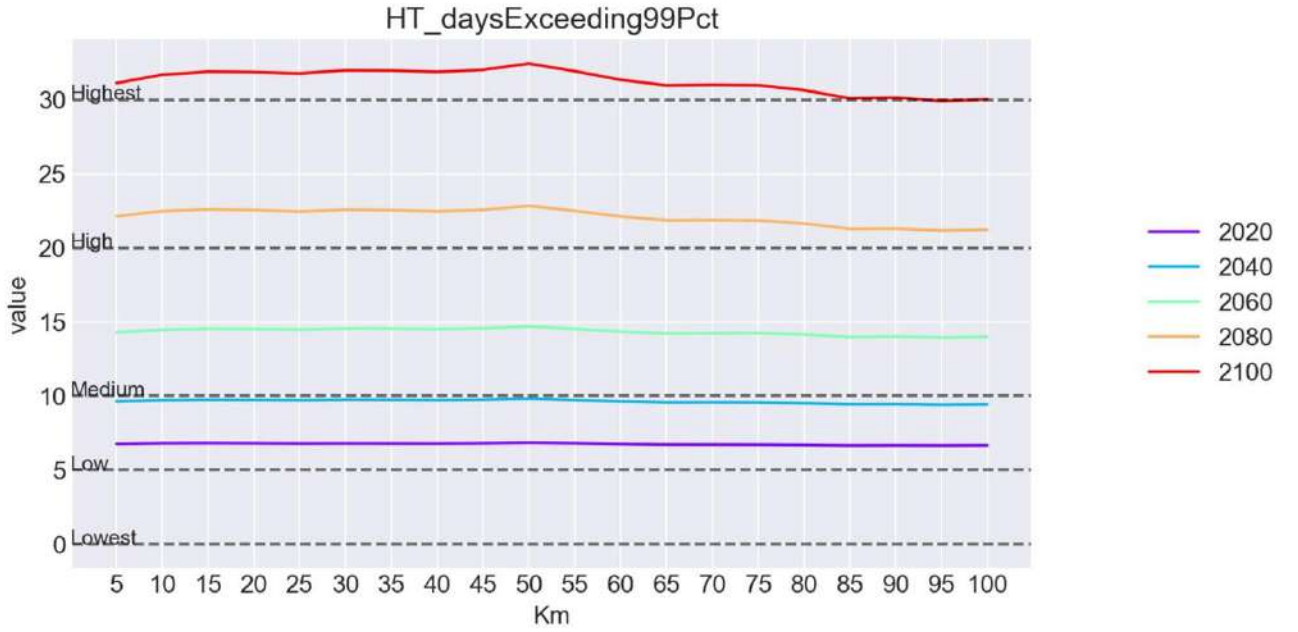

**Figure 14: Extreme Heat hazard, represented by the number of days per year with temperature exceeding the local historical 99th percentile temperatures – Pessimistic Scenario.**

**WILDFIRE HAZARD**

Wildfire hazard is a relevant hazard for the Project according to Jupiter data. The trend is increasing along the road in all scenarios and the hazard level changes between “Low” to “High” according to classification criteria given below.

**Table 5: Classification criteria for the Wildfire Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | > 20 fires |
| High | 8-20 fires |
| Medium | 4-8 fires |
| Low | 2-4 fires |
| Lowest | < 2 fires |

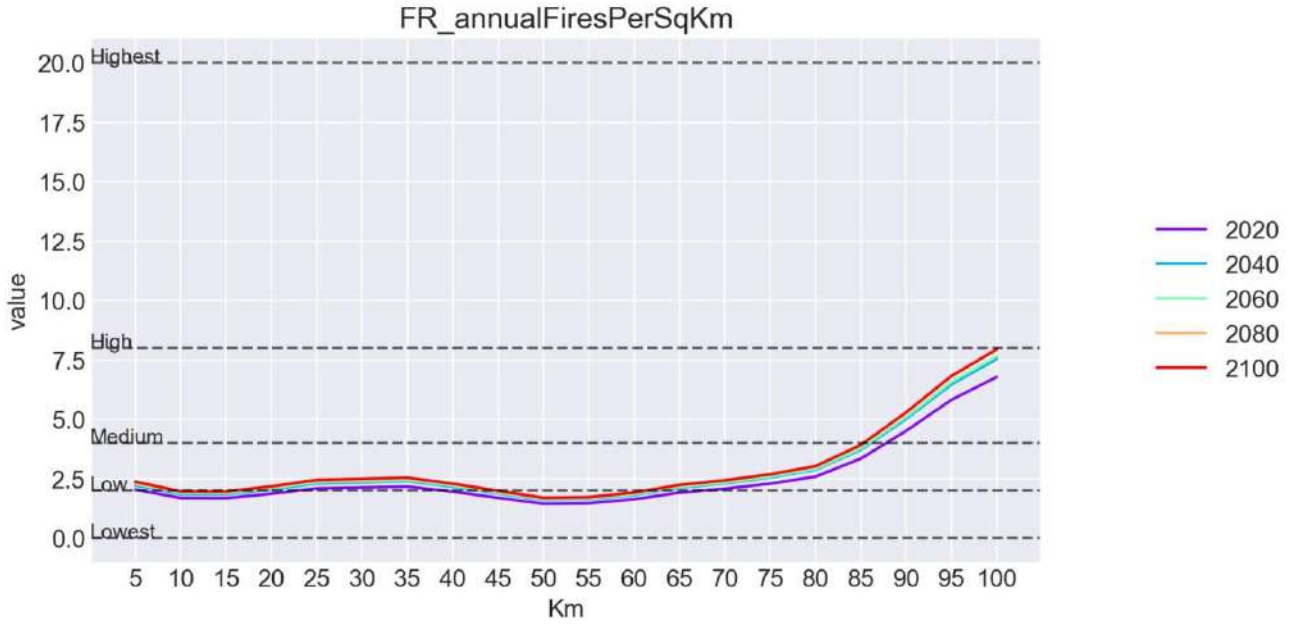

**Figure 15: Wildfire hazard, represented by mean annual number of wildfires that are expected in a 1 sq km grid cell – Optimistic Scenario.**

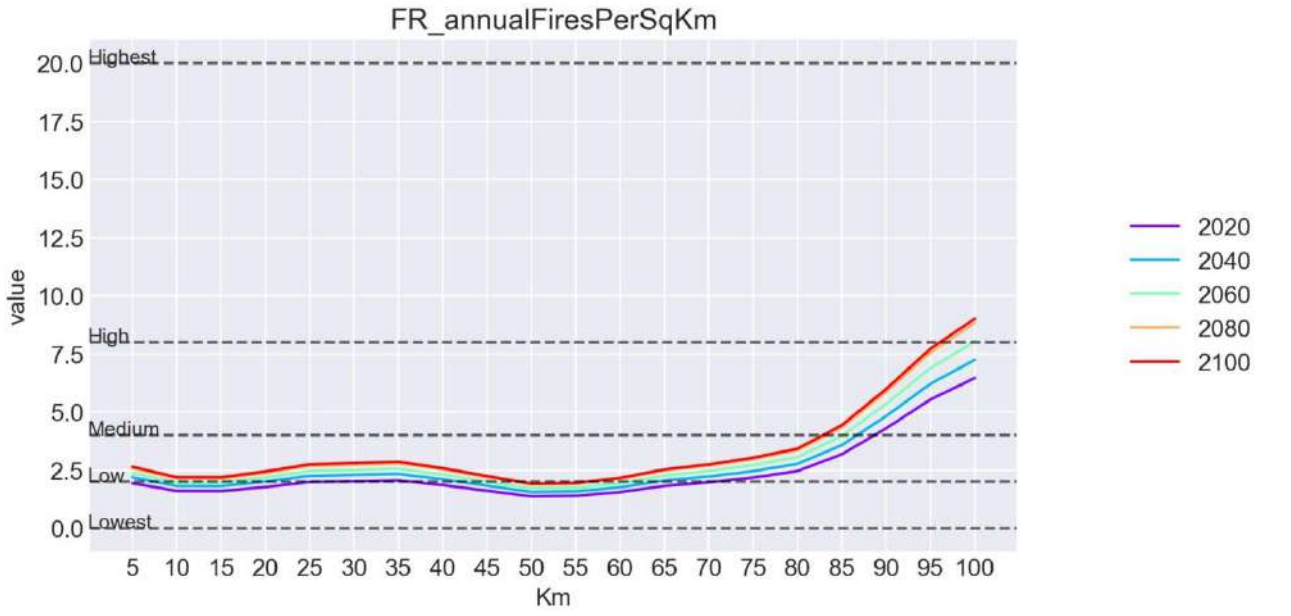

**Figure 16: Wildfire hazard, represented by mean annual number of wildfires that are expected in a 1 sq km grid cell – Intermediate Scenario**

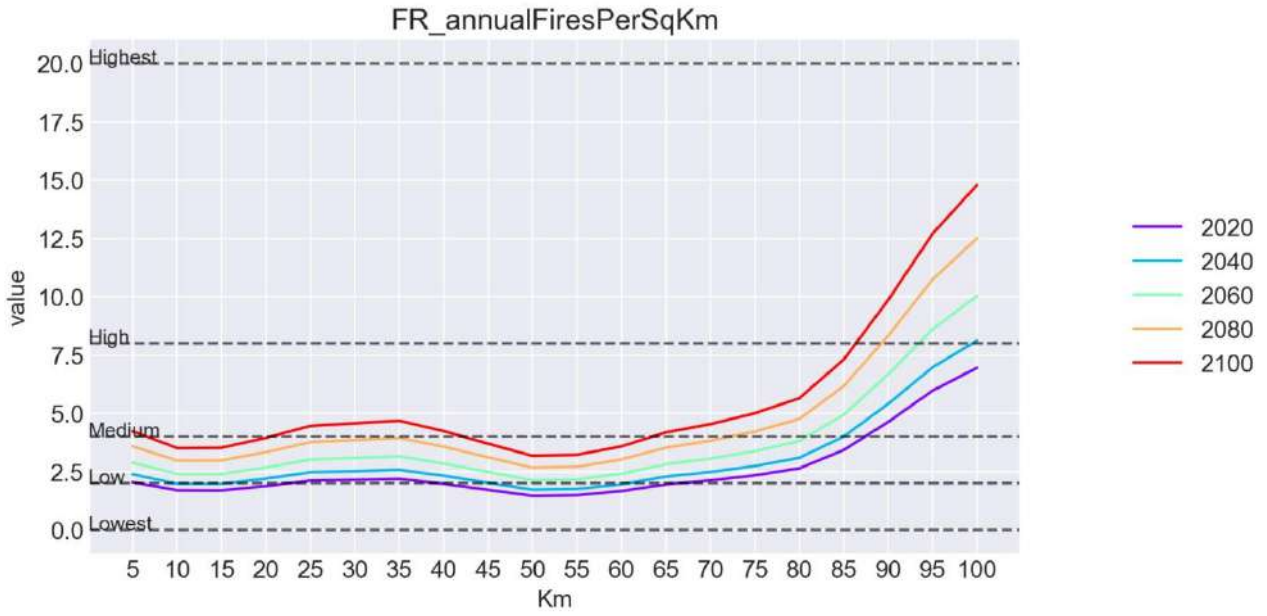

**Figure 17: Wildfire hazard, represented by mean annual number of wildfires that are expected in a 1 sq km grid cell – Pessimistic Scenario**

**STRONG WIND HAZARD**

Strong Wind is a relevant hazard for the Project. Values of the selected metric (maximum 1-minute sustained wind speed (in km/h) experienced at the 100-year return period) are around 75-100 km/h) which is classified as between “Low” and “Medium” hazard level for all scenarios according to classification criteria given below.

For all scenarios and for the entire temporal scope of this assessment, values are projected to remain stable, this is the reason why the three charts look similar and the lines related to different temporal scopes are overlapping.

**Table 6: Classification criteria for the Strong Wind Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | >178 km/h |
| High | 119-178 km/h |
| Medium | 90-119 km/h |
| Low | 63-90 km/h |
| Lowest | < 63 km/h |

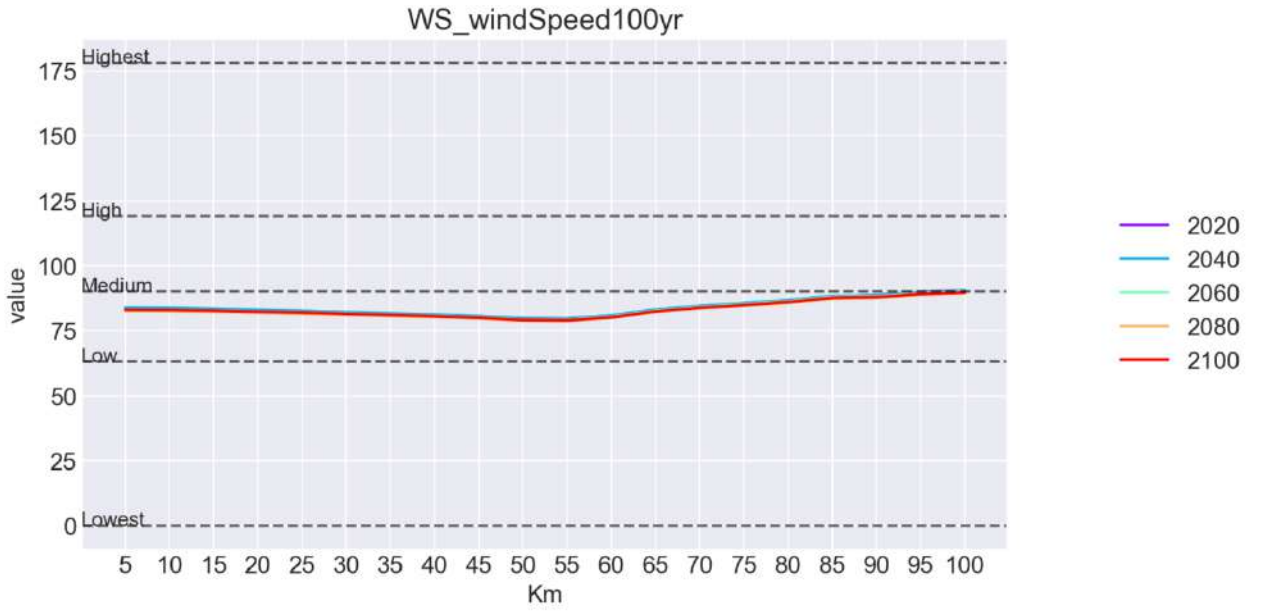

**Figure 18: Strong Wind hazard represented by the maximum 1-minute sustained wind speed (in km/hr) experienced at the 100-year return period – Optimistic Scenario**

**Figure 19: Strong Wind hazard represented by the maximum 1-minute sustained wind speed (in km/hr) experienced at the 100-year return period – Intermediate Scenario**

**Figure 20: Strong Wind hazard represented by the maximum 1-minute sustained wind speed (in km/hr) experienced at the 100-year return period – Pessimistic Scenario**

## SEVERE STORMS HAZARD

Severe Storms is a significant hazard according to Jupiter data and classification criteria given below. For both the intermediate and pessimistic scenarios, the level is expected to increase during the temporal scope. Dataset shows a gradual decrease throughout the road.

**Table 7: Classification criteria for the Severe Storms Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | > 30 days |
| High | 20 - 30 days |
| Medium | 10 - 20 days |
| Low | 5 - 10 days |
| Lowest | < 5 days |

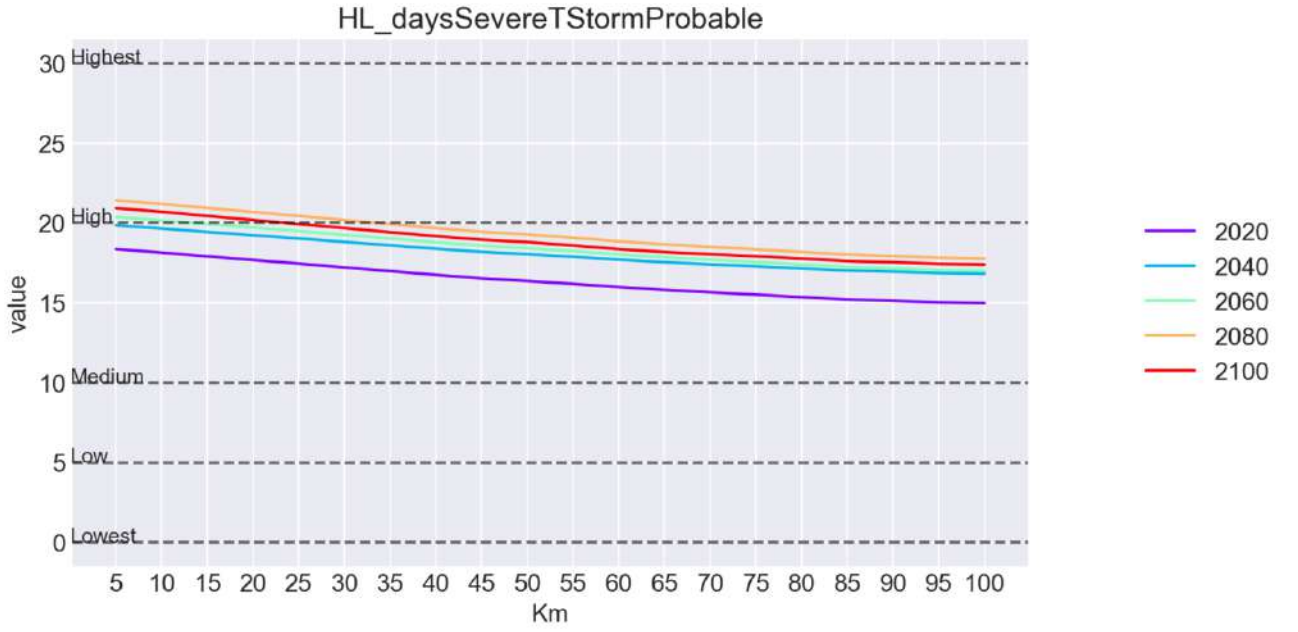

**Figure 21: Severe storms hazard, represented by the number of days per year where environmental conditions are conducive to severe thunderstorm formation – Optimistic Scenario.**

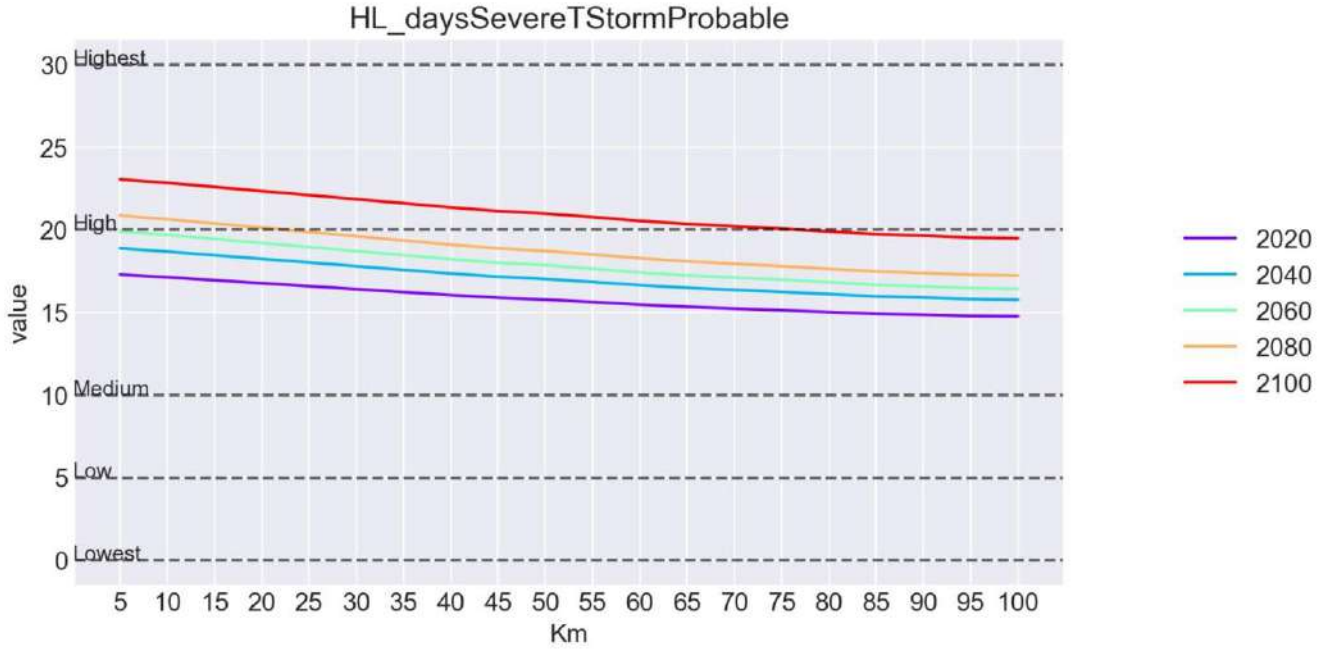

**Figure 22: Severe storms hazard, represented by the number of days per year where environmental conditions are conducive to severe thunderstorm formation – Intermediate Scenario**

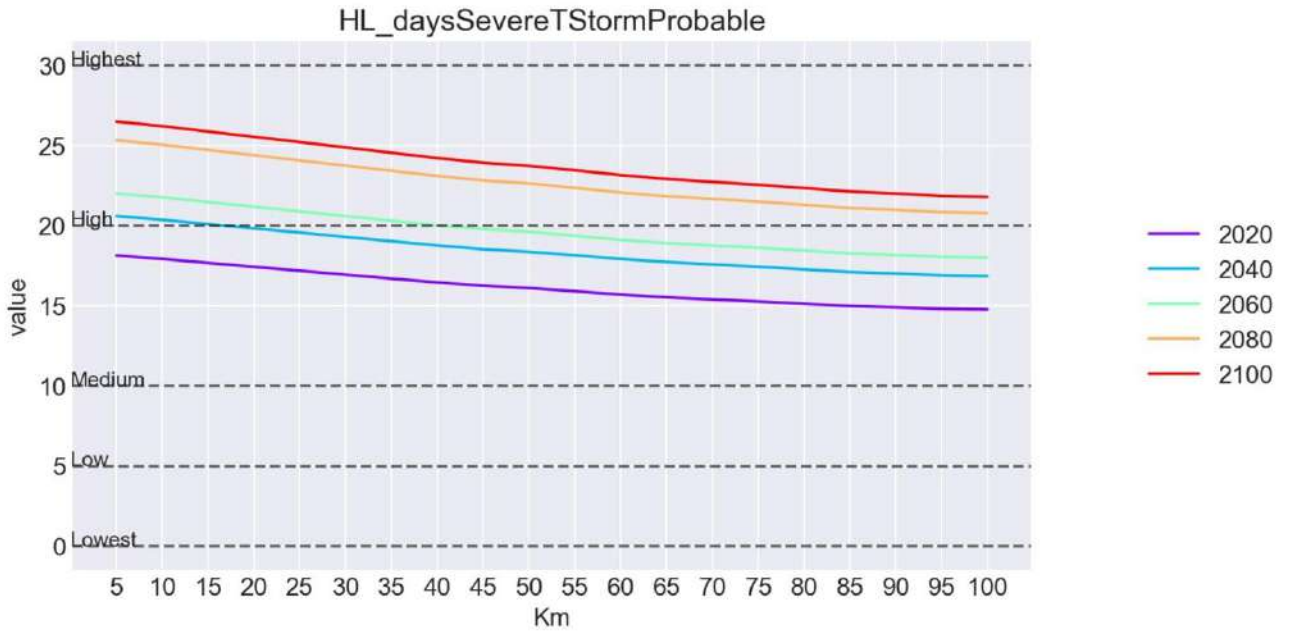

**Figure 23: Severe storms hazard, represented by the number of days per year where environmental conditions are conducive to severe thunderstorm formation – Pessimistic Scenario**

**EXTREME PRECIPITATIONS (RAIN)**

Extreme precipitation is a relevant hazard according to Jupiter data. For the future, no matter the emission scenarios, values remain stable and falls within the “Medium” hazard level according to classification criteria given below.

**Table 8: Classification criteria for the Extreme Precipitations Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | > 250 mm |
| High | 200-250 mm |
| Medium | 150-200 mm |
| Low | 100-150 mm |
| Lowest | < 100 mm |

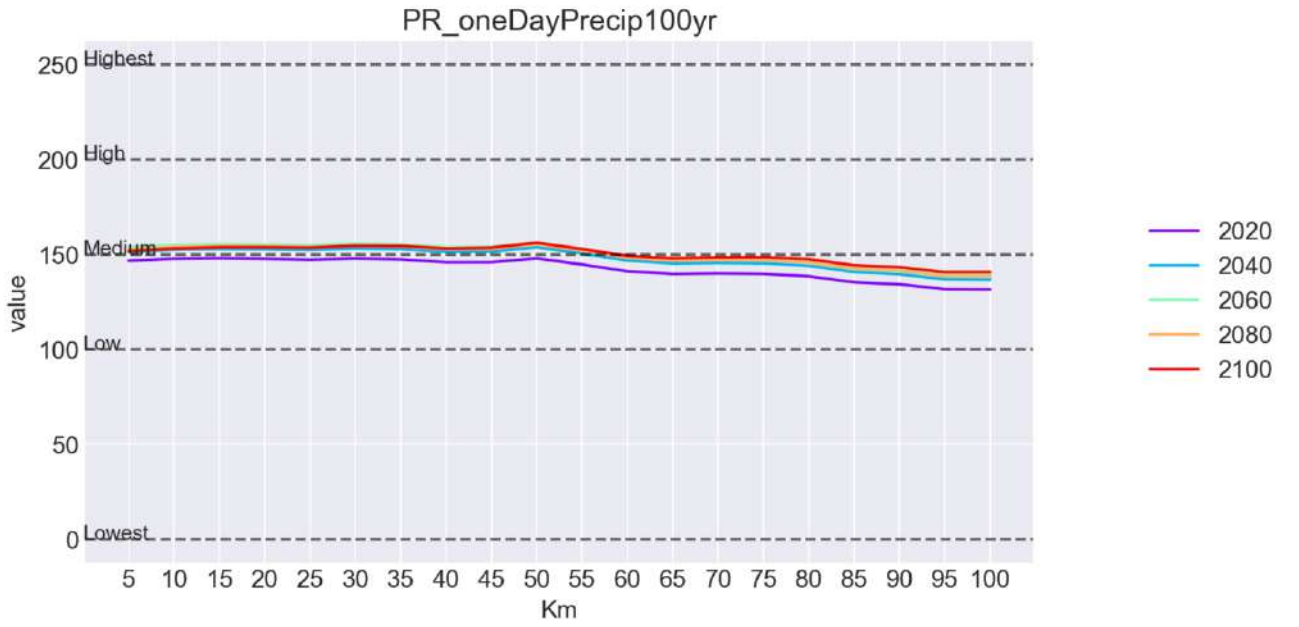

**Figure 24: Extreme precipitation (rain) hazard, represented by the maximum daily total water equivalent precipitation experienced at the 100-year return period – Optimistic Scenario.**

**Figure 25: Extreme precipitation (rain) hazard, represented by the maximum daily total water equivalent precipitation experienced at the 100-year return period – Intermediate Scenario**

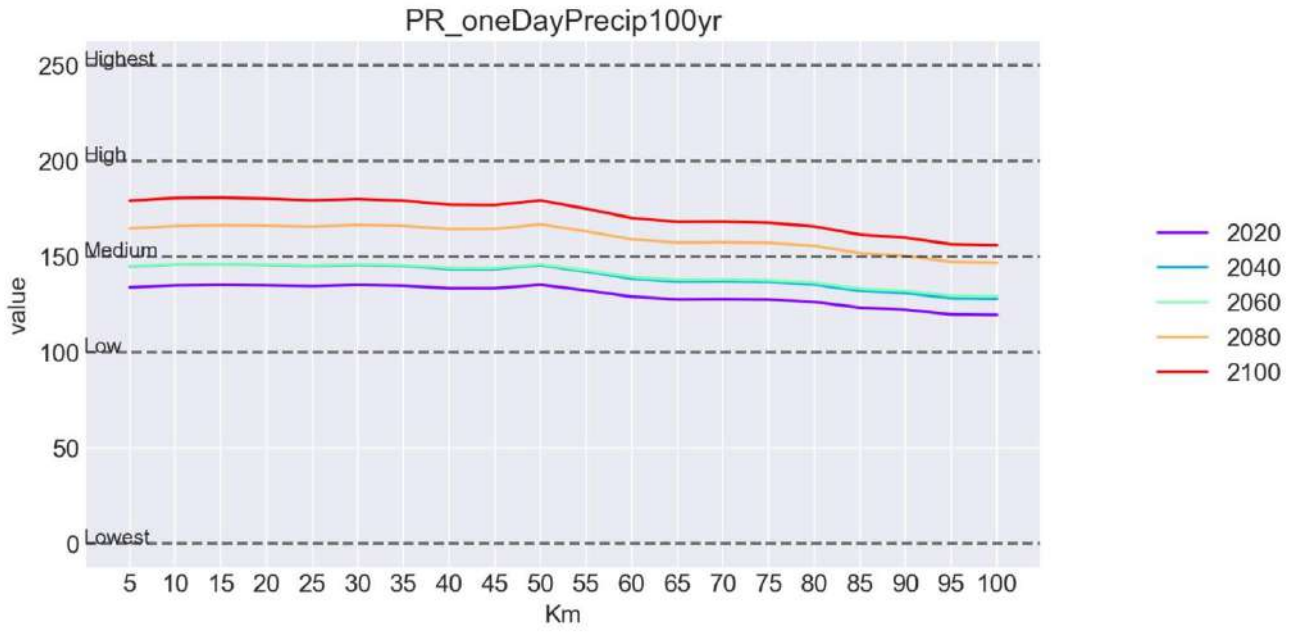

**Figure 26: Extreme precipitation (rain) hazard, represented by the maximum daily total water equivalent precipitation experienced at the 100-year return period – Pessimistic Scenario**

## FLOODING HAZARD

Flooding hazard is a relevant hazard for the Project. The hazard level, represented by the mean fraction of land within the 90m grid cell with flooding at the 100 year, is lowest along the entire road except the kilometres between 25-40 for the entire temporal scope according to all emission scenarios according to classification criteria given below.

**Table 9: Classification criteria for the Flooding Hazard according to Jupiter Intelligence**

| Hazard Level | Threshold |
|---|---|
| Highest | > 3 m |
| High | 2-3 m |
| Medium | 1-2 m |
| Low | 0.25 - 1 m |
| Lowest | < 0.25 m |

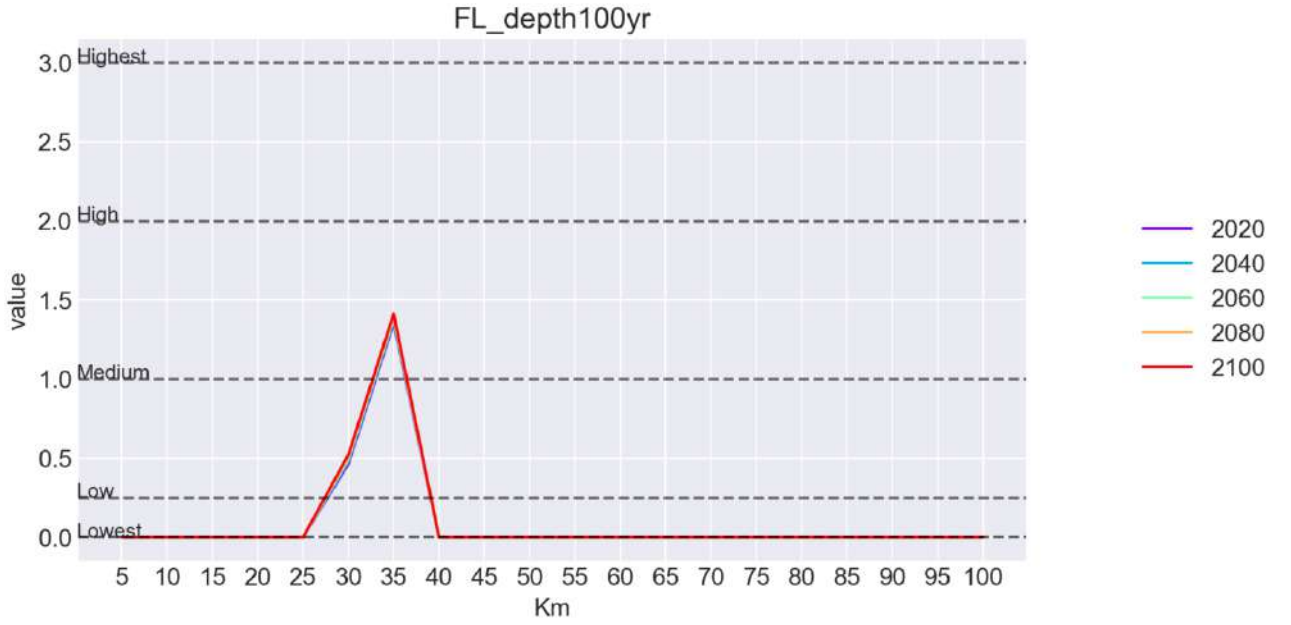

**Figure 27: Flooding hazard, represented by the mean depth of the water (in meters) at the 100-year return period – Optimistic Scenario.**

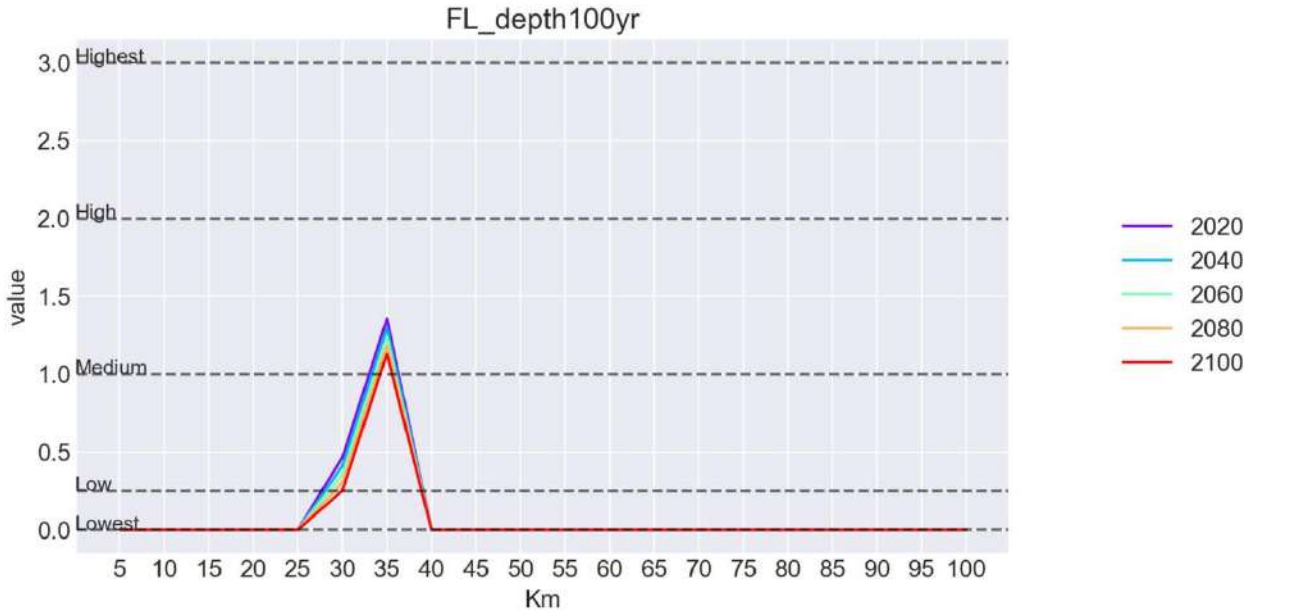

**Figure 28: Flooding hazard, represented by the mean depth of the water (in meters) at the 100-year return period – Intermediate Scenario**

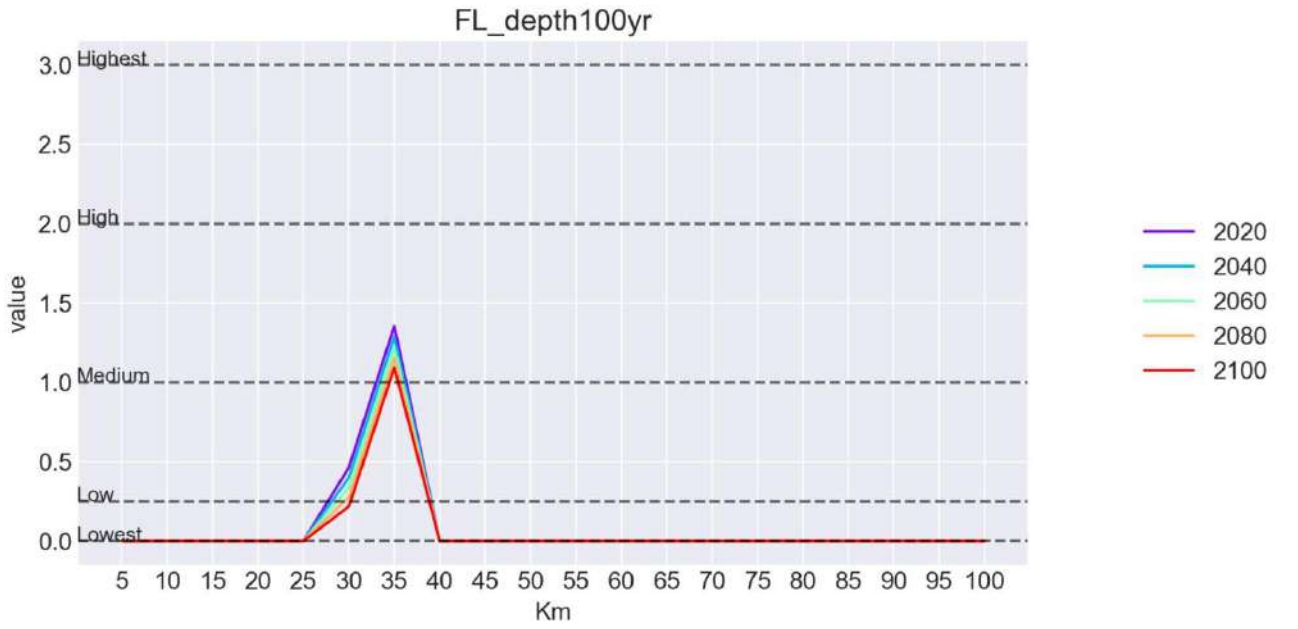

**Figure 29: Flooding hazard, represented by the mean depth of the water (in meters) at the 100-year return period – Pessimistic Scenario**

## 1.3.2 Assessment of Sensitivity, Adaptive-Capacity and Vulnerability

### *1.3.2.1 Sensitivity*

For each hazard, the Sensitivity was qualitatively characterized based on a set of indicators, selected according to the characteristics of the Project potentially exposed to that hazard. A workshop was held in June between the Project representative and a team of WSP Project experts to explain the process and to start identifying a set of most relevant indicators and information useful to support the assessment. Indicators were refined and related information collected with the support of the Project representative.

The final step was to assign a class of Sensitivity (“High”, “Medium” or “Low”), entailing all information collected through the assessment process, also considering their relative importance, reliability and completeness. Classification criteria for sensitivity classes are provided below.

**Table 10: Classification criteria for the Sensitivity classes**

| Sensitivity Class | Description |
|---|---|
| Low | No or minor impacts to the Project main components with no or minor impacts to the Project operativity |
| Medium | Moderate impacts to the Project main components with moderate impacts to the Project operativity |
| High | Significant impacts to the Project main components with significant impacts to the Project operativity |

A conservative approach has been adopted assigning a higher Sensitivity class whenever the assessment was uncertain due to inconsistent indicators.

The Project Sensitivity towards each hazard is presented below with the main considerations that justify the assessment.

**Sensitivity to Extreme Heat:** overall Sensitivity has been assigned “HIGH”. All mentioned impacts are potential damages of significant importance.

Here are the most relevant impacts that extreme heat could cause to all different Project elements:

- Extreme heat can cause asphalt to soften and become tacky at high temperatures, leading to deformation under the pressure of traffic. This can result in cracks and potholes that compromise the road's structural integrity and safety.
- Extreme heat can cause the expansion of concrete and steel used in overpasses and underpasses, leading to misalignment, cracking, or structural damage. Prolonged exposure without proper expansion joints may result in costly repairs, reduced lifespan of the structures, and safety concerns for vehicles.
- Extreme heat can affect the functionality and comfort of motorway service facilities, as high temperatures may strain cooling systems, increase energy consumption, and reduce the overall operational efficiency. Prolonged heat exposure may also cause degradation of building materials, affecting the longevity of the facilities.
- Extreme heat can cause overhead energy transmission lines to expand and sag, leading to potential electrical faults, power outages, and disruptions in energy supply. This could affect the operation of traffic signals and lighting, posing safety risks to both road users and maintenance personnel.
- High temperatures can negatively impact the health of workers on site, for examples potentially causing sunstrokes, intense fatigue and heat stress.

**Sensitivity to Wildfire:** overall Sensitivity has been assigned “MEDIUM”. All mentioned impacts are potential damages of significant importance.

Here are the most relevant impacts that wildfire could cause to all different Project elements:

- Wildfires can cause direct damage to the motorway infrastructure, including the road surface, overpasses, culverts, and noise barriers. High temperatures and flames can degrade or destroy these components.
- Wildfires create immediate safety hazards such as reduced visibility due to smoke, increased risk of falling debris, and potential road blockages caused by damaged infrastructure or fallen trees.
- Wildfires can directly impact motorway service facilities, threatening both buildings and essential services. The risk of fire damage to structures, utilities, and equipment could lead to service closures, prolonged downtime, and increased operational costs for facility operators.
- Wildfires pose a significant risk to overhead energy transmission lines and substations. The heat from wildfires can damage or destroy power infrastructure, leading to electrical outages that disrupt the operation of traffic signals and lighting, posing safety risks to both road users and maintenance personnel.

**Sensitivity to Strong Wind:** overall Sensitivity has been assigned “MEDIUM”. The potential impacts appear to be of medium magnitude, mainly relating to possible disruptions in the operation.

Here are the most relevant impacts that strong winds could cause to all different Project elements:

- Signs, lighting poles, and other roadside structures can be damaged or knocked down by strong winds, potentially leading to road blockages or hazards if these items fall onto the road.
- Strong winds can exert significant forces on overpasses, underpasses, and culverts, causing vibrations or oscillations. Over time, this can lead to structural wear or damage, particularly to elevated roadways,

potentially compromising their stability and integrity. This could necessitate emergency closures, costly repairs, and long-term disruptions to traffic.

- High winds can particularly affect high-sided vehicles like trucks and buses, increasing the risk of these vehicles tipping over. This risk is exacerbated on open stretches of road where there are few barriers to slow the wind.
- Strong winds can place stress on overhead energy transmission lines and substations, causing them to sway, sag, or even collapse. This can lead to power outages, affecting the operation of traffic signals and lighting. Disruptions in power supply could pose safety hazards to road users and require extensive repairs to restore service.
- Strong winds can also impact motorway service facilities, potentially causing damage to buildings, signage, and other infrastructure. This can result in service interruptions, increased maintenance costs, and disruptions to essential facilities, affecting both passengers and operators.
- Strong winds could also lead to a higher presence of dust in the air, thus lowering visibility for the workers and the accumulation of dust on the road.
- Strong winds could also pose a safety risk to personnel that work outdoors or in close proximity to structures that could collapse.

**Sensitivity to Severe Storm:** overall Sensitivity has been assigned “HIGH”. The potential impacts appear to be of significant magnitude, potentially affecting all different project elements.

Here are the most relevant impacts that severe storms could cause to all different Project elements:

- Severe storms can lead to road surface damage from flooding, debris, or high winds. Heavy rain can erode the roadbed, causing misalignment or instability. High winds can blow debris onto the road, creating hazards for drivers. This can result in service disruptions, increased maintenance costs, and heightened risks of accidents, endangering the safety of road users.
- Severe storms can cause significant damage to overpasses, underpasses, and culverts through intense rainfall, flooding, and high winds. Flooding can erode or undermine foundations, while wind can stress or damage structural components. Elevated roadways are particularly vulnerable to storm-induced forces and debris. Damage to these structures may require emergency repairs, causing prolonged road closures and increased operational costs.
- Severe storms can cause significant damage to energy transmission infrastructure along the motorway. High winds, heavy rain, and lightning can lead to power outages, structural damage, and electrical faults. Fallen trees and debris can also damage power lines and substations. Power outages can disrupt road operations, create safety hazards, and require extensive repair efforts to restore service, impacting the functionality of traffic lights and lighting.
- Storms can damage motorway service facilities, with intense rainfall and high winds potentially affecting buildings, utilities, and equipment. Flooding or debris accumulation can disrupt services, increase operational costs, and lead to service interruptions, affecting both passengers and operators.
- Lightning strikes can also damage the road and other Project components.
- Thunderstorms and especially lightning pose a safety risk to personnel that work outdoors or in close proximity to structures that could collapse.

- The drainage system capacity could also be exceeded with a high amount of water or blocked by the dust and other objects moved by the power of the storm.

**Sensitivity to Heavy precipitations (Rain):** overall Sensitivity has been assigned “MEDIUM”.

The potential impacts appear to be of medium magnitude, potentially affecting both the infrastructures and the workforce.

Here are the most relevant impacts that heavy precipitation could cause to all different Project elements:

- Persistent or heavy rainfall can erode the roadbed and embankments, potentially leading to landslides or the collapse of sections of the motorway. This erosion can undermine the structural integrity of the roadway and adjacent structures like culverts.
- Heavy precipitation can overwhelm drainage systems, causing flooding and erosion around overpasses, underpasses, culverts, and interchanges. Prolonged or intense rainfall can lead to structural damage, such as undermining foundations, causing collapse, or damaging the integrity of elevated roadways. In culverts and underpasses, excessive water flow can cause blockages or weaken structures. Structural failures can lead to emergency closures, extensive repairs, and significant disruptions to traffic.
- Heavy precipitation can damage energy transmission infrastructure along the motorway through flooding and waterlogging, which can undermine power poles, switchyards, and foundations. Excessive rain can also lead to electrical faults, increasing the risk of line collapse or damage. Power outages can disrupt road operations, create safety hazards, and require significant repair efforts to restore service, impacting critical systems such as traffic lights and lighting.
- Heavy precipitation can also impact motorway service facilities, potentially damaging buildings, utilities, and essential services. Heavy precipitation can cause disruptions to facilities, increase operational costs, and lead to service interruptions, affecting both passengers and operators.
- Rainwater, especially when it is acidic, can deteriorate road materials, including asphalt and concrete. This leads to quicker degradation
- Heavy rain can damage electronic signs and lighting systems, either through direct water damage or due to power outages associated with storms
- Extreme rain may affect people working on site, thus causing delays in operations. In particular, local flood could represent a relevant electrical or physical risk for workers.

**Sensitivity to Flooding:** overall Sensitivity has been assigned “MEDIUM”.

The potential impacts appear to be of medium magnitude, potentially affecting both the infrastructures and the workforce.

Here are the most relevant impacts that flooding could cause to all different Project elements:

- Flooding could affect workers, with the risk of been drawn by the flood wave, with mud and other sediments transported.
- Flooding can bring a significant amount of debris onto the motorway, including rocks, branches, and other materials that can cause accidents or damage vehicles.
- Overpasses may be particularly vulnerable to flooding, especially if the water levels rise significantly. Flooding can compromise their stability, potentially leading to structural failure.

- Flooding can damage electrical systems for lighting and traffic signals along the motorway, as well as digital signage, affecting their functionality and further compromising road safety.
- The drainage system capacity could also be exceeded with a high amount of water or blocked by other objects dragged by the force of the water into the system. If drainage systems along the motorway are overwhelmed or blocked by debris during a flood, water can accumulate on the road surface, leading to further damage and increased risk of accidents.
- Intense rainfall can quickly overwhelm drainage systems, leading to flooding on the motorway. This can cause temporary closures and force vehicles to take longer detours. Standing water can also hide other hazards, such as deep potholes or debris, which can damage vehicles or cause accidents.
- Flooding can also impact motorway service facilities, potentially damaging buildings, utilities, and essential services. Flooding can cause disruptions to facilities, increase operational costs, and lead to service interruptions, affecting both passengers and operators.

#### 1.3.2.1.1 Adaptive Capacity

Similarly to Sensitivity, the Adaptive Capacity was qualitatively assessed for the entire motorway as a whole through a participatory process that involved the Project representatives and WSP Project experts. The final step was to assign a class of Adaptive Capacity (“High”, “Medium” or “Low”), entailing all information collected through the assessment process, also considering their relative importance, reliability and completeness. Classification criteria for adaptive capacity classes are provided below.

**Table 11: Classification criteria for the Adaptive Capacity classes**

| Adaptive Capacity Class | Description |
|---|---|
| Low | No or little measures in place to either reduce, mitigate, prevent or avoid the potential impacts |
| Medium | Measures in place to moderately reduce, mitigate, prevent or avoid the potential impacts |
| High | Measures in place to significantly reduce, mitigate, prevent or avoid the potential impacts |

A conservative approach has been adopted assigning a lower Adaptive Capacity class whenever the assessment was uncertain due to inconsistent indicators.

Here following are some measures that apply to all different climate-related hazards. These measures will be considered in assigning a class of adaptive capacity of the Project.

- The Project owner is the Republic of Türkiye Ministry of Transport and Infrastructure (MoTI), General Directorate of Highways (KGM) and the Client is the EPC Contractor of the Project. Therefore, the Client will implement the spefications of KGM.
- In order to strengthen the mobile connectivity, which is crucial in case of extreme events, fiber optic network cables along the motorway will be installed in support of the existing GSM network. This infrastructure will support the monitoring of the Project via CCTV and sensors that will be installed along the motorway, operational 24/7. The project will be equipped with Intelligent Transportation Systems, enabling comprehensive oversight and enhanced safety features, such as immediately informing the motorists through Variable Message Signs (VMSs) located along the motorway.

- The Project route will be patrolled by the O&M Subcontractor in 4 hours intervals which will help checking for any potential disruption due to climate-related hazards.
- A quick-response strategy will be implemented for severe weather events, including staffing and equipment readiness.

**Adaptive Capacity to Extreme Heat**

The overall Adaptive Capacity to Extreme Heat has been assessed a “Medium” considering the following adaptive measures:

- Project specific weather monitoring stations are in place in addition to the government's stations. These stations are connected to the Main Control Centre through the SCADA system and can be monitored online.
- Cooling systems for critical infrastructure such as tunnels and service areas will be installed and maintained.
- The roadside vegetation is being regularly watered and will continue to be watered during operation to help cooling the surrounding area and maintain the health of greenery which can provide shade.

**Adaptive Capacity to Wildfires**

The overall Adaptive Capacity to Wildfires has been assessed a “Medium” considering the following adaptive measures:

- There will be a buffer zone named as “fire strip” as per the KGM specifications to reduce the risk of fire spreading to the road.
- Regular clearing and maintenance of vegetation will be conducted along the motorway to reduce the amount of combustible vegetation available for wildfires.
- Infrastructures will be built and maintained using non-combustible or fire-resistant materials, especially for signs, barriers as per the KGM specifications.
- There will be emergency U-turn locations on the motorway to be used in case of emergency situations such as wildfires.
- All service areas, toll plazas and O&M centres will be equipped with automated firefighting systems.

**Adaptive Capacity to Strong Wind**

The overall Adaptive Capacity to Strong Wind has been assessed a “Medium” considering the following adaptive measures:

- Project specific weather monitoring stations are in place in addition to the government's stations. These stations are connected to the Main Control Centre through the SCADA system and can be monitored online.
- All signs, light poles, and other structures will be securely anchored to withstand high winds.
- For high-sided vehicles during strong wind, there will be a system in place to notify local authorities and inform motorists. This will be done through Variable Message Signs (VMSs), advising them not to exceed predetermined speed limits.
- There will be a routine cleaning procedure followed by the patrollers of O&M subcontractor to clean debris potentially brought to the road surface.

**Adaptive Capacity to Severe Storm**

The overall Adaptive Capacity to Severe Storms has been assessed a “High” considering the following adaptive measures:

- All motorway infrastructure such as overpasses, signs and barriers are designed to withstand severe storm conditions.
- Project specific weather monitoring stations are in place in addition to the government's stations. These stations are connected to the Main Control Centre through the SCADA system and can be monitored online.
- There will be a routine cleaning procedure followed by the patrollers of O&M subcontractor to clean debris potentially brought to the road surface.
- Electrical systems will be equipped with surge protectors to prevent damage from lightning strikes. In addition to this, there will be lightning rods with sufficient protection area at service areas, toll plazas and O&M centres.
- There will be emergency U-turn locations on the motorway to be used in case of emergency situations such as severe storms.

**Adaptive Capacity to Heavy precipitations (Rain)**

The overall Adaptive Capacity to Heavy precipitations (Rain) has been assessed a “High” considering the following adaptive measures:

- Project specific weather monitoring stations are in place in addition to the government's stations. These stations are connected to the Main Control Centre through the SCADA system and can be monitored online.
- There will be a routine cleaning procedure followed by the patrollers of O&M subcontractor to clean debris potentially brought to the road surface.
- There will be emergency U-turn locations on the motorway to be used in case of emergency situations such as heavy precipitations.
- Permeable materials will be used for road surfaces to facilitate water drainage.
- High visibility and reflective road markings will be placed that are visible in heavy rain.

**Adaptive Capacity to Flooding**

The overall Adaptive Capacity to Flooding has been assessed a “Low” considering the following adaptive measures:

- There will be a routine cleaning procedure followed by the patrollers of O&M subcontractor to clean debris potentially brought to the road surface.

#### *1.3.2.2 Vulnerability*

The magnitude of potential effects and consequences were assessed for each hazard, combining the Sensitivity and the Adaptive Capacity. A qualitative approach has been used, applying the matrix shown in Figure 30.

| VULNERABILITY | | | |
|---|---|---|---|
| | SENSITIVITY | | |
| ADAPTIVE CAPACITY | Low | Medium | High |
| High | Lowest | Low | Medium |
| Medium | Low | Medium | High |
| Low | Low | High | Highest |

**Figure 30: Vulnerability Matrix**

The Project resulted more vulnerable to Extreme Heat and Flooding. For Extreme Heat this is due to the combination of a “High” Sensitivity, while this is due to the “Medium” Sensitivity and “Low” Adaptive Capacity.

The Project resulted less vulnerable to Wildfires, Strong Wind, Severe Storm and Heavy Precipitations when compared to Extreme Heat and Flooding. In all cases the Vulnerability resulted “Medium”, except for the Heavy Precipitations which resulted as “Low”, as the result of the application of quite an extensive list of adaptation measures which are supposed to reduce the potential impacts of each hazard.

**Table 12: Vulnerability assessment**

| Hazard | Sensitivity | Adaptive Capacity | Vulnerability |
|---|---|---|---|
| EXTREME HEAT | High | Medium | High |
| WILDFIRES | Medium | Medium | Medium |
| STRONG WIND | Medium | Medium | Medium |
| SEVERE STORM | High | High | Medium |
| HEAVY PRECIPITATIONS (RAIN) | Medium | High | Low |
| FLOODING | Medium | Low | High |

### 1.3.3 Risk Assessment

The Climate Change Risk has been assessed combining Vulnerability and Hazard levels, according to qualitative considerations based on the following matrix Figure 31.

| RISK | | | | | |
|---|---|---|---|---|---|
| | VULNERABILITY | | | | |
| HAZARDS | Lowest | Low | Medium | High | Highest |
| Lowest | Lowest | Lowest | Low | Low | Medium |
| Low | Low | Low | Low | Medium | Medium |
| Medium | Low | Medium | Medium | High | High |
| High | Low | Medium | High | High | Highest |
| Highest | Medium | High | High | Highest | Highest |

**Figure 31: Risk Matrix**

A summary of the results follows with the description of how each risk will evolve during the temporal scope according to the different emission scenarios.

- **Extreme Heat Risk:**

Extreme Heat Risk can be considered a significant risk for the Project. In fact, the Project resulted with a high level of vulnerability which combined with hazard levels at the different locations resulted in a range of risk level from medium to high or even highest, in particular considering the intermediate and pessimistic scenarios. Having in mind the evolution in time of this hazard, the risk of extreme heat is expected to become particularly relevant after 2040 and keeping increasing for the rest of the time horizon.

- **Wildfires**

Wildfires can be considered a relevant risk, but it depends on the locations along the road. In fact, having in mind the levels for this hazard according to all 3 different scenarios, there is an increasing chance of having wildfires after around KM:080+000. In particular for the optimistic and intermediate scenarios, there are not significant differences depending on the time frame, while for the pessimistic scenarios the chance of wildfires seems also increasing moving from present to future time period. The combination of these level of hazard with the vulnerability, which was assessed as “medium”, resulted in a risk assessment that can be summarized as follows:

  - KM:000+000 - 080+000: risk level ranging from “low” (for optimistic and intermediate scenarios) to “medium” (for the pessimistic scenario)
  - KM:080+000 – 100+000: ranging from “medium” (for the optimistic and intermediate scenarios) to “high” (for the pessimistic scenarios, in particular considering the second part of the century.

- **Strong Wind**

According to the outcome of the Risk Assessment, strong wind does not seem to be a very significant risk for the Project. In fact, for almost the entire road the hazard levels are low no matter the emission scenarios and temporal scope which combined with a level of vulnerability assessed as “medium” resulted in a “low” level of this risk.

- **Severe Storms**

Severe Storms resulted as a significant risk for the Project. In particular the risk is more critical at the beginning of the road, and it decrease towards the end of it. In fact, at the beginning of the road, the hazard level is “medium” at present reaching the “high” level yet around 2040-2060 (depending on the emission scenario) which combined with a “medium” vulnerability resulted in risk level ranging from “medium” to “high” risks. Instead, at the end of the road, the hazard level is “medium” at present reaching the “high” level yet later on, around 2080 (depending on the emission scenario) which combined with a “medium” vulnerability resulted in risk level “medium” almost for the entire temporal scope of the assessment expect for the very end of the century.

- **Heavy Precipitation**

According to the outcome of the Risk Assessment, heavy precipitation does not seem to be a very significant risk for the Project. In fact, from beginning of the road to the middle, the hazard level is “low” at present reaching the “medium” level yet around 2040-2080 (depending on the emission scenario) which combined with a “low” vulnerability resulted in risk level ranging from “low” to “medium” risks. Instead, from the middle of the road to the end, the hazard level is “low” at present reaching the “medium” level yet later on, around 2080 (depending on the emission scenario) which combined with a “low” vulnerability resulted in risk level “low” almost for the entire temporal scope of the assessment expect for the very end of the century.

- **Flooding**

As per Risk Assessment, flooding does not seem to be a very significant risk for the Project except from the section of the route around KM:025+000 – 040+000 km. In fact, the hazard level is “lowest” until KM:025+000 and after KM:040+000 which combined with a “high” vulnerability resulted in risk level “low” for all three scenarios for the entire temporal scope. Instead, around KM:035+000 the hazard level reaches to “medium” level which combined with a “high” vulnerability resulted in risk level “high” for all three scenarios for the entire temporal scope.

### 1.3.4 Risk Mitigation Actions and Conclusions

The risk assessment that has been performed shows a higher level of risk for extreme heat and severe storms. Flooding resulted a significant risk but only at a very specific location (around KM:035+000). Similarly, wildfires can be considered a critical risk but only at the end of the road (from around KM:080+000 to 100+000). Instead strong wind and heavy precipitations do not seem critical risks for the Project.

WSP suggests a list of potential adaptation measures that applies to all hazards to further prevent the related risks, to reduce the potential impacts towards all different Project elements and to increase the general awareness of climate-related risks. These are listed below:

- Earthworks will be designed to include measures to mitigate shrinkage such as a suitable foundation depth, selection of appropriate material and planting selection/location to ensure stability.
- The motorway and its structures should be regularly monitored for early detection of any potential issues, enabling timely maintenance and interventions to ensure the integrity of the infrastructure.
- After the extreme climate events, the motorway and its structures should be assessed for climate-induced damages, ensuring prompt repairs and minimizing disruptions to traffic flow and safety.
- Spare and emergency capacity should be integrated into safety and operational systems to ensure continuous service in the event of climate-related failures, maintaining the functionality of critical systems such as traffic management and lighting.
- Weather forecasts for extreme weather conditions (such as extreme temperatures, heavy rainfall, etc.) should be closely followed to inform planning and adjust working hours, as well as implement appropriate response strategies during these conditions.
- Expand the existing Emergency Plan to include procedures and measures to deal with climate hazards. The Plan should be regularly updated.
- Ensure appropriate training is provided about Climate Change and related risks to increase workers awareness.
- A collaborative, partnership approach to climate resilience should be adopted, involving stakeholders such as local authorities, environmental agencies, and infrastructure operators to enhance the Project's ability to adapt to climate challenges.
- Consider integrating the outcomes of the risk assessment into Risk Management Plan.

Additionally, appropriate operation-phase adaptive capacity measures will be captured within the operation ESMS and evidence will be provided on how recommended mitigation is being integrated into the Project delivery strategy, in addition to definition of monitoring requirements.

In addition to this, WSP would also like to suggest a list of potential adaptation measures specific to each hazard starting from those which resulted more critical according to this Climate Change Risk Assessment.

For **Extreme Heat** the following measures might be taken under consideration to further avoid, prevent or mitigate the potential impacts:

- Materials will be used in temporary construction facilities that are designed to withstand high temperatures and include appropriate ventilation features.
- Materials will be used in the pavement design that are designed to withstand high temperatures, to minimise the risk of thermal expansion and pavement buckling e.g. bitumen grade and modified binders.
- Design and construct infrastructure with materials that are resistant to high temperatures and thermal expansion.
- Implement programs to prevent heat-related illnesses among road maintenance and construction workers, including scheduling work during cooler hours of the day.
- Operation and maintenance plans will include requirements for regular maintenance of road surface and inspections following extended periods of high temperatures (heat waves).
- Operational Emergency Response Plan will incorporate health and safety measures for employees and road users during extreme high temperatures.

For **Severe Storms**, considering adding the following adaptive measures. Higher priority should be given to sections from beginning to the middle of road.

- Consider putting in place procedures to evaluate the integrity of main infrastructures after severe storms events.
- Consider putting in place procedures to evaluate the integrity of main electrical systems after severe storms events.
- Use the information coming from the existing meteorological station to reschedule the working hours of personnel that work outdoors to avoid been exposed in case of severe storms.
- Integrate the outcomes of the risk assessment into Risk Management Plan in particular for this climate-related hazard considering that the level for this risk is not fully mitigated despite the quite comprehensive existing adaptation measures.

For **Flooding**, considering adding the following adaptive measures, in particular focusing on the section between KM:025+000 - 040+000:

- Flood Risk Assessment will be undertaken to provide detailed analysis of the potential for flooding based on the site's topography, hydrology, and local climate conditions; and to identify areas vulnerable to flooding. Accordingly, the design will take into account the impacts of climate change, including appropriate allowance for climate change to ensure that the risk of flooding is minimised, and there is no increase in flood risk to surrounding areas as a result of the proposed development.
- Temporary or permanent flood barriers will be installed in areas identified to be at risk of flooding.
- Install sensors to detect rising water levels and provide early warnings to road users and maintenance teams.
- Flooding sensors and alerts will be installed or provided to alert workers and road users.

For **Wildfires**, considering adding the following adaptive measures.

- Consider building firebreaks along the motorway, especially in sections between KM:080+000 – 100+000 which resulted more prone to wildfires. These can act as barriers to slow or stop the spread of fire.
- Work closely with local fire departments and forest service agencies to develop coordinated response plans for wildfire emergencies. This includes joint training exercises and shared communication systems.

For **Strong Wind** considering adding the following adaptive measures.

- A more in-dept analysis of wind conditions during operation might be conducted to identify sections exposed to strong wind where eventually install windbreaks or barriers along exposed sections of the motorway to reduce wind velocity.

Finally for **Heavy Precipitations**, there are no additional measures to be recommended.

## 1.0 PURPOSE AND SCOPE

The purpose of this Cultural Heritage Management Plan ("CHMP") is to preserve the archaeological and cultural heritage within the scope of the Project and minimize the possible adverse impacts.

The impact mitigation considering the existing and potential archaeological sites within the Project Area is possible by developing a management plan. Based on that, the construction activities should be conducted under the scope of this CHMP in accordance with the national legislation and in international standards. Within the document, a management plan is defined in general terms for the archaeological heritage within the Project area.

.

**Figure 1** Known Archaeological Excavation Sites Around the Project Route

## 2.0 LEGISLATION FRAMEWORK

In this section, the legislation framework that is related to the management of cultural heritage is summarized.

### 2.1 Law on Protection of Cultural and Natural Assets (Law No: 2863 (published in the Official Gazette dated July 21, 1983))

In Türkiye, the movable and immovable cultural and natural assets are under protection and conservation with the "Law on Preservation of Cultural and Natural Assets", 2863 that was amended by law numbered 3386 (Date of Acceptance: 21.07.1983, published in the Official Newspaper issue 18113 with date 23.07.1983).[1] According to the Law, essential assets which are identified as cultural and natural heritage under legal protection are identified as follows:

- Natural and immovable cultural assets belonging to the 19th century and before;
- Any immovable cultural asset constructed after the end of the 19th Century but categorized as "a significant asset which requires preservation" by the Ministry of Culture and Tourism;
- Immovable cultural assets located within the Protection Sites (in the Law, Protection Sites are defined as ancient sites and city ruins that reflect the main social, economic or architectural characteristics of their era. Protection Sites may also be locations where fundamental historical events took place or areas containing considerable natural or cultural assets with natural or cultural features requiring preservation);
- Structures, buildings or places that have witnessed significant historical events during the Turkish Independence War or the foundation of the Turkish Republic, regardless of time and registration; and
- All dwellings and buildings that have been used by Mustafa Kemal ATATÜRK without considering their time of construction or registration.

Within the scope of this Law, the Ministry of Culture and Tourism and its local branches (Boards for Preservation of Cultural and Natural Assets, Museums) are responsible to take decisions at a national level and providing necessary legal actions to protect cultural and natural assets listed above. At the local level, Regional Boards for Preservation of Cultural and Natural Assets are responsible to register and classify the cultural and natural heritage, inspecting and taking decisions regarding land use and construction works related to motorway projects which can affect these assets. Declaration of site protection, covering discovered cultural heritage located in their area of authorization, is also under the responsibility of the Regional Boards whose decisions can directly affect the Project too.

According to Law on Preservation of Cultural and Natural Assets numbered 2863, all natural and cultural assets meeting conditions for legal preservation are the property of the State. Therefore, Regional Boards have the power and the authority to ensure legal protection and conservation of relevant sites and to approve or reject all activities which have the potential for negative impact on

[1] https://www.mevzuat.gov.tr/MevzuatMetin/1.5.2863.doc

these sites such as construction, destruction, road cut and excavation. Currently, the İstanbul 1 and Edirne Regional Board for Preservation of Cultural and Natural Assets are the board responsible for the Project Area.

Apart from the Law on Preservation of Cultural and Natural Assets numbered 2863, some additional regulations do exist governing the procedures about the protection and preservation of cultural and natural assets. First of these is the Principle Decision of the Ministry of Culture and Tourism of Türkiye named "Protection and Use Conditions of Archaeological Sites" (No. 658, issued 5 November 1999).[2] This decision states that all archaeological sites need to be classified and protected according to their significant features.

In the law archaeological sites are classified under three categories. These are:

- 1st Degree Archaeological Sites,
- 2nd Degree Archaeological Sites,
- 3rd Degree Archaeological Sites

Principle Decision No: 658 defines these sites as follows:

- **1st Degree Archaeological Sites:** Areas requiring highest level of protection. They should be preserved with the exception of scientific excavations. The area should be free of any type of buildings and construction. All kinds of construction, excavation, and modification activities are prohibited. However, for exceptional cases such as the necessity for infrastructure construction, Regional Preservation Boards may permit such activities based on the approval of the relevant museum and the head of the scientific excavation team.
- **2nd Degree Archaeological Sites:** Areas requiring ***high*** level of protection. They should be preserved based on the conditions of protection and utilization set by the Regional Preservation Boards. Additional construction is prohibited. As for the 1st Degree Site Degree archaeological sites, for exceptional cases such as the necessity for infrastructure construction, Regional Preservation Boards may permit such activities based on the approval of the relevant museum and the head of the scientific excavation team.
- **3rd Degree Archaeological Sites:** Lowest level of protection area. Construction is permitted based on the decisions of Regional Preservation Boards. Before applying for a construction permit, test pit excavations should be conducted and the outcomes of these excavations should be reviewed by the relevant museum and, if present, the head of the scientific excavation team. ***All excavations are under the supervision of museum expert.*** Reviews should be submitted to Regional Preservation Boards. The Boards may ask for extension of the areal test pit coverage before taking any decision.

[2] https://kvmgm.ktb.gov.tr/TR-44310/ilke-karari--karar-no-658--karar-tarihi-05111999.html

The archaeological and cultural heritage findings were listed in the Archaeology Baseline Report and is also given Appendix.

### 2.1.1 Definitions *(Article 3 of the Law numbered 2863)*

**Article 3 of the Protection of Cultural and Natural Entities Law provides the following definitions:**

- *Cultural Assets are all over-ground, underground or submarine movable and fixed assets related with science, culture, religion and fine arts, belonging to prehistoric and historic eras.*
- *Natural Assets are the over-ground, underground or submarine assets that belong to geological eras, prehistoric and historic eras and that shall be protected because of their rarity or specifications and preciousness.*

### 2.1.2 Obligation to Inform (Article 4 of the Law numbered 2863)

In case of chance find of movable or immovable cultural assets, the nearest museum directorate or mukhtar in the villages, local authorities in other places should be informed. If these cultural assets are encountered within military posts and forbidden areas, major commands should be duly informed. Mukhtar should inform the nearest ***local*** authority within a day (24 hours), the ***local*** authority and other authorities should report the incident to the Ministry of Culture and Tourism and the related museum directorate via formal letter. The Ministry of Culture and Tourism, General Directorate of Cultural ***Heritage and Museums*** and related ***Regional Board Directorate of Protection of Cultural Heritage*** are responsible for the registration of the cultural heritage

### 2.1.3 Legal Necessities before the Impact Mitigation Measures (Article 7 of the Law numbered 2863)

In Article 7, it is stated that the related ***Regional Board Directorate of Protection of Cultural Heritage*** are responsible for the registration of the cultural and natural heritage. Therefore, for the registration of the immovable cultural assets, it is required to apply officially and directly to the related ***Regional Board Directorate of Protection of Cultural Heritage***.

## 2.2 Regulation on Determination and Registration of Immovable Cultural and Natural Heritage (Official Gazette dated 10.12.1987 and numbered 19660)

The aim of this regulation is to introduce principles on permits about research and excavations to be conducted under the law of protection of cultural and natural entities, the preservation necessities of the findings, studies on these findings, the assignments, duties and authorizations, rights and expenses of the related persons.

## 2.3 European Convention on The Protection of The Archaeological Heritage (Revised) (Valetta, 16/01-1992)

This convention is known as the Valetta Convention. It sets guidelines for the funding of excavation and research work and publication of research findings. It also deals with public access, in particular

to archaeological sites, and educational actions to be undertaken to develop public awareness of the value of the archaeological heritage.

### 2.4 Convention Concerning the Protection of the World Cultural and Natural Heritage, 1972

Türkiye is a signatory to this Convention (The World Heritage Convention), which was approved by The General Conference of the United Nations Educational, Scientific and Cultural Organization (UNESCO), meeting in Paris from 17 October to 21 November 1972.

The signatories to this Convention have agreed "to ensure that effective and active measures are taken for the protection, conservation and presentation of the cultural and natural heritage" on their territories.

## 3.0 ROLES AND RESPONSIBILITIES

Project Owner will be responsible for the preparation and implementation of the environmental and social impact assessment-based management plans, which will be project specific. These plans shall be practical, detailed procedures for use in the field.

Project Owner will ensure the implementation of the commitments stated in the ESIA.

Project Owner will also be responsible for the performance of all contractors and subcontractors with respect to the project specific plans and shall comply with all relevant project standards, statutory requirements, permit and license conditions and secure all applicable permits and licenses.

### 3.1 Management of Cultural Heritage

The basic definitions regarding the management of cultural heritage are given in the following bullets:

- Ministry of Culture and Tourism is the responsible authority.
- Museum Directorate is responsible to provide experts for the sites within 24 hours after being informed and to officially define the Chance Find (see Appendix-2). ***Museum directorate is responsible excavation of chance find areas. Museum Directorate will follow the directions and decisions from Regional Board Directorate of Protection of Cultural Heritage***.
- ***Regional Board Directorate of Protection of Cultural Heritage*** is the only decision maker on any intervention, which would be made on the site after the chance find.
- Project Owner is responsible for the management of archaeological issues during the progress of construction of the Project area and implementation of related management plan and chance find procedure.
- Project Owner will employ archaeologists at the Project site responsible for the monitoring of ground disturbance activities. They are also responsible with the monitoring of the implementation of the CHMP and chance find procedure.
- Project Owner will ensure that Chance Finds procedure is adequately enforced during ground disturbance activities. During the implementation of the Chance Finds procedure on site, Project Owner will directly report the issue to Museum archaeologist and relevant Regional Preservation Board.
- Salvage excavation (and other Chance find issues) (If necessary) are under the responsibility of Project Owner.
- Project Owner is also responsible for giving necessary trainings to the field staff about the implementation of the chance find procedure.
- Project Owner will record all chance finds on the Chance Finds Report Form and in the Chance Finds Register as per the Chance Find Procedure in Appendix-2.

## 3.2 Management Structure and Responsibilities

Project Owner will be responsible for the execution of the plan and procedure about archaeological issues of Project site. The Archaeologist of Project Owner will train the employees about cultural heritage and chance find procedure (see Section 5.1). Also, the monitoring of the construction works will be the responsibility of Project Owner Archaeologist (see Section 5.3).

The Project Manager will be in charge of the all-construction work team.

The Archaeologists will work with the equipment operators and have authority to the stop work. Each will accompany topsoil stripping crew during RoW clearing. They will direct the operator to stop work or redirect stripping activities in case of a chance find. They will submit scheduled progress reports and special reports of chance finds to Environmental and Social Coordinators.

In addition to the Chance Find Procedure, the Edirne and İstanbul 1 No Regional Board Directorates will decide for the requirement of a salvage excavation if needed. The contact information of these board directorate is given in Appendix-3. The excavation permissions will be obtained by the relevant museum directorate from the General Directorate of Cultural Heritage and Museums. Following the permission, Project Owner will provide a team of qualified archaeologist to conduct the salvage excavation within the framework of their contract under the guidance of Project Archaeologist / Consultant archaeologist, who will follow the instructions of the related museum directorate. These works may cover non-destructive research methods such as remote sensing and geophysics and test pit excavations. The negotiations and meetings with the related Regional Board Directorate of Protection of Cultural Heritage on technical topics during and after the salvage excavation will be held by Project Archaeologist / Consultant archaeologist.

**During the construction activities, there will be no blasting within 300 m of archaeological sites (see "Implementing Regulation of Mining Activities, Item 24")[3].**

[3] https://www.resmigazete.gov.tr/eskiler/2010/11/20101106-6.htm

## 4.0 ARCHAEOLOGICAL FINDINGS

The procedure given below that must be followed in case of encountering a chance find is based on national legislation and provisions in international standards. The significance of the archaeological finding may vary upon evaluation opinions of related museum experts.

### 4.1 Intangible Cultural Heritage

Project Owner will liaise with local authorities to identify if project activities can interfere with traditional celebrations or festivities; alternative solutions will be agreed with local authorities. Furthermore, Project Owner will liaise with local authorities to identify if project activities restrict access to elements of traditional culture; alternative solutions will be agreed with local authorities

### 4.2 Archaeological Findings of Minor Significance

This type of archaeological findings is comprised of a finding isolated from its environment or findings in notably small sizes which may be found by chance. In this case, chance find procedure (CHMP, Appendix-2) will be followed.

The finding will be reported to the archaeologist. The construction activities will be ceased in the field where the finding is discovered and the finding will be reported to the relevant museum expert by archaeologist. Following the completion of investigation of the notified relevant Museum Directorate, the necessary arrangements, such as the identification of the boundaries of the archaeological asset/site (finding), preservation by a protection band, notification of workers in order to prevent any physical intervention.

The archeological and cultural heritage findings and preservation methods and mitigation measures for each finding for the Project Area are listed in Appendix-1.

### 4.3 Archaeological Findings of Moderate Significance

This type of archaeological findings is small scale findings in groups or single findings with medium size architectural elements such as tombs. In this case, chance find procedure (CHMP, Appendix-2) will be followed. In order to prevent a possible damage, necessary arrangements must be made to determine the boundaries of the archaeological remains to keep the construction equipment out of access.

The finding will be reported to the construction manager and archaeologist by the Project Owner. The construction activities will be ceased in the field where the finding is discovered and the finding will be reported to the relevant museum expert by archaeologist. Following the completion of investigation of the notified relevant Museum Directorate, the necessary arrangements will be taken, such as the identification of the boundaries of the archaeological asset/site (finding), preservation by a protection band, notification of workers in order to prevent any physical intervention.

### 4.4 Archaeological Findings of Major Significance

This type of findings is comprised of findings with great importance such as a settlement area, a tumulus, a mound or a big necropolis (wide graveyard areas with archaeological characteristic) and

the construction activities must be immediately stopped and chance find procedure (CHMP, Appendix-2) will be followed. This type of chance find may cover the entire construction site in such a way that the entrance and exit of the construction equipment and vehicles cannot be managed without giving any damage to the archaeological remains.

The finding will be reported to the construction manager and archaeologist by the archaeologist of Project Owner. The construction activities will be ceased in the field where the finding is discovered and the finding will be reported to the relevant museum expert by archaeologist. Following the completion of investigation of the notified relevant Museum Directorate, the necessary arrangements will be taken, such as the identification of the boundaries of the archaeological asset/site (finding), preservation by a protection band, notification of workers in order to prevent any physical intervention.

## 5.0 TRAINING, REPORTING AND MONITORING

### 5.1 Training

The Archaeological Monitoring archaeologist/consultant of Project Owner will provide cultural heritage training to all project crew including the implementation of the chance find procedure as part of the Project trainings. Archaeologists of Project Owner will receive archaeological training as well as specialized training for the procedures they are to follow for monitoring site construction activities.

### 5.2 Reporting

Project Owner will record all chance finds on the Chance Finds Report Form (see CHMP, Appendix-2) and in the Chance Finds Register (see Appendix-3) as per the Chance Find Procedure in Appendix-2. The register will be kept up to date by ***Project Owner*** archaeologist. ***The chance finds report form will be kept in hard copy by the archaeologist.***

### 5.3 Monitoring

The function of the archaeological monitoring process will be as follows:

- Provide advice to define the areas where the construction activities may continue or shall be stopped due to Archaeological findings.
- To record archaeological features observed on, and close to the existing project site.
- To record archaeological features discovered during construction activities.
- To provide advice in the form of a 'preliminary assessment' to the construction superintendent on the significance and implications of new archaeological discoveries on the project site.

***All ground disturbance activities will be monitored by Project Owner's archaeologist*** during the construction of the project site and its Above Ground Facilities ***for evidence of cultural heritage items.*** In case of encountering archaeological findings, the Chance Find Procedure described in Appendix-2 will be initiated.

## 1. PURPOSE

The purpose of this Archaeological Chance Find Procedure is to provide guidance to all parties and employees regarding the actions to be taken in case of discovery of an archaeological asset.

## 2. SCOPE

It is likely to encounter archeological findings during the construction activities of the Project. Any type of activity requiring excavation or any type of intervention on the landscape through earthworks has potential to lead to discovery or destroying of archeological entities.

## 3. PROCEDURE

Any physical remains of past human activity, including artifacts, plant and animal remains, structural remains and soil features are defined as archaeological entities. All actions to be carried out in case of discovery of an archaeological entity should comply with the Law on Cultural and Natural Assets Conservation Law Numbered 2863 (Law Number: 2863, Date of Approval: 21.7.1983, Publication in the Official Gazette: Date: 23/7/1983 No: 18113).

In the event of discovery of an archaeological entity, the following procedure shall be implemented:

- All construction and other relevant activities in the vicinity of the chance find will be ceased by the Archaeologist of the Project Owner or anyone, who encounters a chance find.
- Project archaeologist will contact construction manager as soon as a chance find is encountered.
- Project archaeologist will contact museum directorate archaeologist immediately.
- Archaeologist of the Project will properly secure chance find site via flagging, no-entry signs, etc. and prevent/limit the vehicle traffic within the immediate vicinity of chance find and also protect the site by not moving, removing or further disturbing the chance find.
- Boundaries of discovered archaeological site coordinates will be recorded and photograph of the location and the finding will be taken and also video record will be made.
- The site and its vicinity will be secured against damage or loss until a final decision is made about this site by the Board.
- Archaeologist of Project will fill out Part A of Chance Find Form and send a copy to Museum archaeologist within 24 hours keeping a copy as a record,
- If any human remains such as contemporary grave or graveyard are noticed, security forces will be informed. Unless the remains are determined to be recent, the local administration (village head: mukhtar, or district governor) has the full authority.
- Further steps to be followed and proper procedures to be implemented for the management of the finding(s) (changes in the layout, conservation, preservation, restoration or salvage) will be decided and reported in writing by the Museum Directorate.
- In case the site is considered to be of no significance by the Museum Directorate, Project archaeologist will inform the Construction Manager and they will inform their managers. Subsequent of filling out Part B of Chance Find Form by Archaeologist of Project within

24 hours while retaining a copy of the Chance Find form as a record, the construction works will proceed since no further actions are required.

- In case the site is considered to be of significance by the Museum Directorate, Project archaeologist will be informed by the Museum Directorate about the decision on the further actions. Project archaeologist will inform the construction manager and their managers. Subsequent of filling out Part B of Chance Find Form by Archaeologist of Project within 24 hours while retaining a copy of the Chance Find form as a record, the instructions of the Museum Directorate will be followed. After field investigation, Museum Directorate will declare their decision on the significance of the site and the actions to be followed as per their decision are summarized in Table 1.

*Table 1: Actions to be followed*

| Site to be of no Significance | Site to be of Minor Significance | Site to be of Major Significance |
|---|---|---|
| ✓ Project's archaeologists/relevant personnel will inform their managers,<br>✓ Archaeologist of the Project will record the decision in Part C of Chance Find Form within 24 hours,<br>✓ Archaeologist of the Project will retain a copy of Chance Find form as a record,<br>✓ No further actions will be required,<br>✓ This step closes out the chance find procedure,<br>✓ Construction activities may resume. | ✓ A salvage excavation is to be completed<br>✓ Museum Directorate will provide instructions, and/or supervision for salvage archaeological excavation Project archaeologist,<br>✓ Project's archaeologists will inform their managers,<br>✓ Under the guidance of Museum archaeologist (following instructions from other authorities, Edirne or İstanbul 1 No Regional Board etc.), Project will provide a team of qualified archaeologist to conduct the salvage excavation,<br>✓ Once the excavation is completed, Archaeologist of Project will provide a report to construction manager,<br>✓ Project archaeologist will provide a report to the Museum Directorate,<br>✓ Regional Board Directorate of Protection of Cultural Heritage will officially confirm the completion of recovery and inform Project archaeologist,<br>✓ Project archaeologist will inform the construction manager that no further actions are required,<br>✓ Project's archaeologists will inform their managers,<br>✓ Archaeologist of Project will record the decision in Part C of Chance Find Form within 24 hours,<br>✓ Archaeologist of Project will retain a copy of Chance Find form as a record,<br>✓ No further actions will be required,<br>✓ This step closes out the chance find procedure<br>✓ Construction activities may resume. | ✓ An excavation is to be completed,<br>✓ Site will be treated according to "Law on the Conservation of Cultural and Natural Property (2863)",<br>✓ Museum Directorate will provide instructions, and/or supervision for salvage archaeological excavation to Project archaeologist,<br>✓ Project's archaeologists will inform construction manager and their managers,<br>✓ Under the guidance of Museum archaeologist (following instructions from other authorities, Edirne or İstanbul 1 No Regional Board etc.), Project will provide a team of qualified archaeologist to conduct the salvage excavation,<br>✓ Once the excavation is completed, Archaeologist of Project will provide a report to construction manager,<br>✓ Project archaeologist will provide a report to the Museum Directorate,<br>✓ Regional Board Directorate of Protection of Cultural Heritage will officially confirm the completion of recovery and inform Project archaeologist,<br>✓ Site will be officially recorded and protected according to Turkish regulations,<br>✓ Project archaeologist will inform the construction manager that no further actions are required, or that a relocation is required,<br>✓ Project's archaeologists will inform their managers,<br>✓ Archaeologist of Project will record the decision in Part C of Chance Find Form within 24 hours,<br>✓ Archaeologist of Project will retain a copy of Chance Find form as a record,<br>✓ No further actions will be required,<br>✓ This step closes out the chance find procedure,<br>✓ Construction activities may resume, or relocation is implemented. |
