construction work is moving ahead on the '1915Çanakkale' bridge, which, once complete, will be the world's longest span suspension bridge. connecting the towns of gelibolu (gallipoli) on the european side of turkey with lapseki on the asian side, the bridge will provide a new heavy transit alternative to the istanbul strait passage. it is hoped that this will result in faster and more cost-effective freight transport to the region, as well as strengthened economic potential and social bonds for the local community. once complete, the bridge will have a total length of 4,608 meters (15,118 ft), a central span of 2,023 meters (6,637 ft), and a total bridge tower height of 318 meters (1,043 ft).
